reinforced boundaries of engineering education before World War II During World War II government employers and colleges actively recruited women to train as engineering aides channeling them directly into defense work These wartime training programs set the stage for more engineering schools to open their doors to women Bix offers three detailed case studies of postwar engineering coeducation Georgia Tech admitted women in 1952 to avoid a court case over objections by traditionalists In 1968 Caltech male students argued that nerds needed a civilizing female presence At MIT which had admitted women since the 1870s but treated them as a minor afterthought feminist era activists pushed the school to welcome more women and take their talent seriously In the 1950s women made up less than one percent of students in American engineering programs in 2010 and 2011 women earned 18.4% of bachelor's degrees 22.6% of master's degrees and 21.8% of doctorates in engineering Bix's account shows why these gains were hard won Unsettled Issues Regarding the Certification of Electric Aircraft Ravi Rajamani, Anna Mracek Dietrich, 2021-03-26 The aerospace industry is beginning to grapple with the reality of certifying electric aircraft EA signaling the maturing of the field Many players are ramping up their activities to respond to imminent technical safety and regulatory requirements While there are gaps in EA knowledge as well as the processes for certifying them some leading standards development organizations SDOs such as SAE International ASTM International and RTCA ably supported by representatives from regulatory agencies are stepping in to address many of these issues Of special importance are the new rule changes in the normal category 14 CFR Part 23 Amendment 64 that shift from a prescriptive philosophy to performance based rules Regarding system knowledge there has been a trend in the use electrical energy to power systems that have long employed mechanical hydraulics In the new EA paradigm these components will be employed at criticality levels not previously witnessed in conventional aircraft calling for a specific set of certification demands Unsettled Issues Regarding the Certification of Electric Aircraft tackles the certification challenges faced by EA manufacturers in both the small normal and large transport categories addressing technical business and process issues Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2021007>
