

# Four ways alcohol can cause cancer

## MECHANISM A

Alcohol breaks down into **acetaldehyde** which damages DNA in multiple ways, causing an increased risk of cancer.

## MECHANISM B

Alcohol induces **oxidative stress**, increasing the risk of cancer by damaging DNA, proteins, and cells and increasing inflammation.

## MECHANISM C

Alcohol alters **levels of multiple hormones**, including estrogen, which can increase breast cancer risk.

## MECHANISM D

Alcohol leads to greater absorption of **carcinogens**.

\*Rumgay et al. (2021) reviewed these four mechanisms through which alcohol can cause cancer along with several other possible pathways that appear to influence cancer risk. These include disruption of one-carbon metabolism, alteration of retinoid metabolism, and impaired immune function among others.

**Alcohol and Cancer** Vasilis Vasiliou, Samir Zakhari, Lopa Mishra, Helmut K. Seitz, 2018-10-26 Following the Third Alcohol and Cancer Conference this volume compiles the most up to date research on the role of alcohol consumption in carcinogenesis from epidemiology to pathology metabolism and stem cells More specifically it delves into the effects of alcohol consumption and thyroid cancer CD133 progenitor cells carcinogenic iron accumulation developmental morphogens and cancer inducing epigenetic changes Alcohol and Cancer Proceedings of the Third International Conference is a timely update to Biological Basis of Alcohol Induced Cancer which followed the Second Alcohol and Cancer Conference compiling cutting edge research from graduate students young scientists and researchers It is ideal for graduate students and researchers in oncology hepatology epigenetics and alcohol consumption **Alcohol and Cancer** Ronald R.

Watson, 1992-05-22 Alcohol clearly plays key roles in the promotion of cancers initiated by carcinogens Thus it is a major cause or significant contributing factor to many cancers Ethanol affects the metabolism of anticancer drugs It significantly contributes to viral hepatitis and liver cancer In addition it modulates colorectal carcinogenesis procarcinogen activation and risk of oral cancers The mechanisms of ethanol's actions in carcinogen activation and alcohol related cancers are extensively reviewed This book is designed for the researcher trying to understand how alcohol causes cancer as well as the clinician epidemiologist wishing to know more about its role in human cancer incidence **Alcohol, Immunity, and Cancer** Raz

Yirmiya, Anna N. Taylor, 1992-11-18 Chronic alcoholism afflicts approximately 7% of the adult population of the United States and an even larger proportion in some other countries Among the most devastating health problems associated with alcoholism are increased morbidity and mortality from infections and cancer Alcohol Immunity and Cancer is the first book devoted entirely to presenting up to date comprehensive reviews on how the deleterious effects of alcohol consumption impact the immune system and increase the risk of developing many types of cancer Topics covered include the effects of alcohol on cytokine activity the modulation of natural killer cell activity by alcohol fetal alcohol exposure and immunity alcohol and hepatic carcinogenesis and alcohol and cancer of the pancreas Alcohol Immunity and Cancer will be invaluable for immunologists pathologists toxicologists microbiologists biochemists endocrinologists and neuroscientists interested in alcohol research It will also benefit medical experts and general practitioners who need to know the role alcohol may play in the health and disease of their patients **Alcohol, Tobacco and Cancer** Chi-Hin Cho, Vishnudutt Purohit, 2006-01-01 The

first part of this book addresses in detail the correlations between alcohol and carcinogenicity focusing on specific organs such as the upper aerodigestive tract liver colon pancreas and breast This includes the impairment of methionine folate metabolism and DNA methylation by alcohol as well as the use of S-adenosylmethionine to prevent cancer Furthermore the synergistic effects of reactive oxygen species and iron in producing liver cancer are addressed The second part is dedicated to the role of tobacco in lung and digestive tract cancers and to their prevention highlighting the role of phytochemicals

More specifically the mutagenic mitogenic precarcinogenic anti apoptotic and immunosuppressive properties of nicotine which are involved in the development of cancer and the possible use of nicotine vaccine in the prevention of mortality associated with tobacco are discussed

**Biological Basis of Alcohol-Induced Cancer** Vasilis Vasiliou, Samir Zakhari, Helmut K. Seitz, Jan B. Hoek, 2014-11-26 In the recent years a significant amount of research has emerged connecting the link between alcohol and cancer The field has rapidly advanced especially since the complex connection between alcohol and cancer has several unique sub areas that are being investigated This proceedings volume will contain chapters based upon the presentation of the 2nd International Conference on Alcohol and Cancer in Colorado 2013 The various topics explore the affects of alcohol on liver and breast cancer cell signaling and cancer stem cells biomarkers and metabolomics aerodigestive cancers cancer and the immune system and more

S. Department of Health and Human Services, Agency for Healthcare Research and Quality, 2013-04-24

The purpose of our assessment of alcohol and cancer induction is to explore the possible underlying causal mechanism s of the association between alcohol consumption and breast and colorectal cancers Therefore we developed four Key Questions that address the potential mechanism s by which alcohol might be involved in the development of breast and colorectal cancers The primary evidence base to address these questions consisted of experimental studies of humans animals and cell lines where alcohol exposure could be controlled In addition to this evidence base we also considered epidemiology studies where alcohol exposure was not controlled including those in patients with or without cancer and hypothesis generating studies that examined potential metabolic pathways connecting alcohol to cancer risk The following Key Questions will be addressed in this report 1 What are the likely causal mechanisms by which alcohol contributes to the development of breast cancer Which of the possible mechanisms e g induction of P450 cytochromes and carcinogen metabolism effects on blood hormone concentrations effect of acetaldehyde or other alcohol metabolite on apoptosis and DNA repair interactive effects

on other nutritional factors or others are likely to be most important in breast cancer development 2 For the most likely mechanisms of action involving alcohol and the development of breast cancer how might other factors modify the effect of alcohol on breast cancer for example age latency of effect intensity duration and recency of exposure presence of co carcinogens presence of threshold effect Do the causal mechanisms vary by cell type or other tumor characteristics 3 What are the likely causal mechanisms by which alcohol contributes to the development of colorectal cancer Which of the possible mechanisms e g induction of P450 cytochromes and carcinogen metabolism effects on blood hormone concentrations effect of acetaldehyde or other alcohol metabolite on apoptosis and DNA repair interactive effects on other nutritional factors or others are likely to be most important in colorectal cancer development 4 For the most likely mechanisms of action involving alcohol and the development of colorectal cancer how might other factors modify the effect of alcohol on colorectal cancer for example age latency of effect intensity duration and recency of exposure presence of co carcinogens presence of threshold effect Do the causal mechanisms vary by cell type or other tumor characteristics To address these Key Questions we searched electronic databases for information on ethanol consumption and the possible risks for breast and colorectal cancers Thirty five breast cancer studies five in humans 15 in animals and 15 in cell lines and 31 colorectal cancer studies one in humans 19 in animals 10 in cell lines and one combination animal and cell lines were included in the report Information on study design and conduct was used to judge individual study internal validity Data on experimental model mechanism s examined amount and duration of ethanol exposure cancer formation and intermediate outcomes were abstracted and tabled for review and discussion
