*Alcohol and Biological Membranes* Walter A. Hunt, 1985      Alcohol, Cell Membranes, and Signal Transduction in Brain  
Christer Alling, Ivan Diamond, Steven W. Leslie, Grace Y. Sun, W. Gibson Wood, 2012-12-06 Alcohol abuse and alcoholism are international problems whose costs economical ly psychologically and medically have been well documented Alcohol is a unique drug in that the effects of excessive use can have a deleterious effect on most if not all organs of the body The brain is one of the organs most affected by excessive alcohol consumption Effects on the brain can be seen in cognitive function brain structure and neurochemistry Over the past few years there have been significant advances made in understanding how alcohol affects brain neurochemistry This book examines four major areas i e membrane lipids receptors and ion channels second messengers and gene expression where significant advancements have been made The book is divided into four sections based on the four major areas In each section data are examined that cover a range of approaches from in vitro to in vivo studies The section on membrane lipids includes recent developments in how ethanol affects membrane cholesterol domains polyunsaturated fatty acids the cause and consequences of phosphatidylethanol formation and the modulation of membrane protein function by lipid protein interaction The second section comprises chapters on NMDA and 5 HT<sub>3</sub> receptors including new aspects on alcohol neurotoxicity and the molecular heterogeneity that may underlie differences in alcohol sensitivity as well as chapters on GABA gated chloride flux and calcium channels      **Molecular and Cellular Signaling** Martin Beckerman, 2006-09-28 Makes connections between diseases drugs and signaling in those chapters not specifically devoted to pathogens Reviews background in first 5 chapters then offers chapters on cancers and apoptosis and on bacteria and viruses Signaling in the immune endocrine hormonal and nervous systems covered along with cancer apoptosis and gene regulation Each chapter ends with a problem section to facilitate discussion      Alcohol and Biological Membranes Walter A. Hunt, 1985-01-01      **The Structure of Biological Membranes** Philip L. Yeagle, 2004-06-28 Recent research has provided an abundance of new information on membrane biochemistry Now more than ever it is essential to update our current understanding of membrane structure and function to fully appreciate and apply these findings Completely revised and updated to reflect advances in the field *The Structure of Biological Membranes*      Special Report to the U.S. Congress on Alcohol and Health from the Secretary of Health and Human Services , 1997      **The Enzymes of Biological Membranes** Anthony Martonosi, 2012-12-06 A 1 Enzymes of Membrane Phospholipid Metabolism in Animals I Introduction II Type 1 Reactions A Acylation of Glycero 3 phosphate B Esterification of Saturated Fatty Acids to Phospholipids G Hydrolysis of the 1 Acyl Ester in Phospholipids D Other Lysophospholipase Activities III Type 2 Reactions A Formation of the 2 Acyl Ester of Phosphatidic Acid B Esterification of Unsaturated Fatty Acids to Phospholipids C Hydrolysis of the 2 Acyl Ester IV Type 3 Reactions A Diacylglycerol Kinase B Choline and Ethanolamine Phosphotransferase G Hydrolysis of Phospha      Special Report to the U.S. Congress on Alcohol & Health , 1990      Sixth Special Report to the

U.S. Congress on Alcohol and Health from the Secretary of Health and Human Services ,1987      An Introduction to Biological Membranes William Stillwell,2013-04-20 An Introduction to Biological Membranes From Bilayers to Rafts covers many aspects of membrane structure function that bridges membrane biophysics and cell biology Offering cohesive foundational information this publication is valuable for advanced undergraduate students graduate students and membranologists who seek a broad overview of membrane science Brings together different facets of membrane research in a universally understandable manner Emphasis on the historical development of the field Topics include membrane sugars membrane models membrane isolation methods and membrane transport      Mobility and Proximity in Biological Membranes S. Damjanovich,2018-01-18 Cell surface membranes have long been characterized as two dimensional fluids whose mobile components are randomized by diffusion in the plane of the membrane bilayer Recent research has indicated that cell surface membranes are highly organized and ordered and that important functional units of membranes appear as arrays of interacting molecules rather than as single freely diffusing molecules Mobility and Proximity in Biological Membranes provides an overview of the results obtained from biophysical methods for probing the organization of cell surface membranes These results are presented in the context of detailed treatments of the theory and the technical demands of each of the methods The book describes a versatile and easily applied mode for investigating molecular proximities in plasma membranes in a flow cytometer Its analysis of lipid fluidity and viscosity of membranes and the rotational mobility of proteins offers intimate insight into the physical chemistry of biological membranes The electrophysiology of lymphocytes is presented with focus on its importance in different diseases New techniques are described and new data new possibilities and future trends are presented by world experts This book s chapters can serve both as guides to the existing literature and as starting points for new experiments and approaches associated with problems in membrane function      The Biology of Alcoholism Benjamin Kissin,Henri Begleiter,2013-03-09 In this volume the third of our series the emphasis has shifted from the theoretical and experimental to the more clinical and practical aspects of alcoholism Where in the earlier volumes more attention was directed to animal than human studies in this volume almost all material deals with the human condition The clinical manifestations of alcoholism may be divided into two major aspects that of the disease itself and that of its complications This separation is to some extent artificial since in a sense the natural history of the disease is a function of the development of certain complicating mechanisms These mechanisms in turn either become part and parcel of the underlying condition alcoholism or give rise to a new set of clinical variables characterized as medical complications At this point the dichotomy becomes real The disease alcoholism tends to be seen as a distinct psychosocial entity and to be treated with psychosocial techniques The medical complications are more clearly envisioned as being within the legitimate domain of medical practice and are treated by physicians who often tend to ignore the underlying alcoholism The patient is sometimes lost in between The major thrust of this volume is an attempt to describe the

mechanisms of alcoholism as they are now known in such a way as to establish a continuum between the disease alcoholism and its medical complications

**New Research on Alcoholism** Douglas R. Baye, 2007 Alcoholism is a disorder characterised by the excessive consumption of and dependence on alcoholic beverages leading to physical and psychological harm and impaired social and vocational functioning This book gathers new and important research on this socially and medically destructive disorder These include addiction issues forms of treatment behavioural and clinical studies

The Pharmacology of Alcohol and Alcohol Dependence Henri Begleiter, Benjamin Kissin, 1996 This is a comprehensive review of the pharmacological effects of alcohol and the mechanisms underlying the pathogenesis of alcoholism The book draws on general pharmacology neuropharmacology and alcohol studies to explore its theme The second volume in the ALCOHOL AND ALCOHOLISM series it focuses on the pharmacologic mechanisms underlying the development of alcoholism The first section on basic pharmacology is concerned with those aspects that are common to all of alcohol's effects These include pharmacokinetics general metabolism and cross tolerance The second section on neuropharmacology describes the effects of alcohol on various brain functions including circulation and metabolism The third section provides an in depth review of the neurobiology of physical dependence withdrawal and physiological tolerance The book as a whole gives a comprehensive and authoritative picture of the complex pharmacologic actions of alcohol particularly on the nervous system For clinicians and researchers in the field of alcohol and alcoholism it will serve as a fundamental reference

**Cell Membranes** Lukas Buehler, 2015-06-17 Cell Membranes offers a solid foundation for understanding the structure and function of biological membranes The book explores the composition and dynamics of cell membranes discussing the molecular and biological diversity of its lipid and protein components and how the combinatorial richness of both components explains the chemical mechanical and self renewing properties of cell membranes Cell Membranes is a valuable resource for advanced undergraduate students graduate students and professionals

*Research Awards Index*, 1989

The Biology of Alcoholism Henri Begleiter, 2012-12-06 The previous volume The Pathogenesis of Alcoholism Psychosocial Factors attempted to describe the interaction of biological psychological and social factors that lead to the initiation and perpetuation of alcoholism The preface to that volume presented our particular view of the bio psycho social interaction as a progressive process in which earlier developments produce new pathogenetic mechanisms which in turn lead to still other cyclical feedback activities Although influences from each of the three phenomenologic levels are at work during each stage of the clinical course it would appear that social factors are most significant in the early phase psychological factors at the intermediate level and biological ones toward the end These differences are only relative however for influences of all three types surely are operative during all stages of the syndrome This appears to be particularly true for the biological parameters of activity Don Goodwin 1976 who has supplied much of the data that support the role of hereditary factors in alcoholism is wont to say that all living behavior is biological by definition

The operational evidence for this is perhaps more evident in alcoholism than in other syndromes For example the general social indifference of many Asians to alcohol may reflect the presence of an atypical isoenzyme of alcohol dehydrogenase rather than some independently derived cultural norm

**The Dynamic Structure of Cell Membranes** Donald F. Hözl  
Wallach, H. Fischer, 2012-12-06 HERBERT FISCHER Max Planck Institut für Immunbiologie Freiburg Zähringen With 3 Figures Ladies and Gentlemen On behalf of the organizers of the 22nd Mosbach Colloquium Mrs HOLZL WALLACH STOFFEL WIEGANDT and myself I bid you all a hearty welcome We thank you all for coming and naturally feel particular appreciation for the presence of the invited speakers But thanks to the tradition that the Mosbach Colloquia have enjoyed for 22 years we did not need to work very hard since most of our invitations were accepted without hesitation Perhaps some of you will wonder why Mosbach and its tradition means so much especially to the older ones amongst us In any event at a time when we were much hungrier and thirstier than we are today Mosbach became a unique place where we could satisfy our spiritual as well as our physical hunger It was here where we could find the friendly and peaceful atmosphere which helped us to establish contacts with colleagues from foreign countries and from distant scientific fields which often led to lasting communication and cooperation The initiator of these Colloquia my teacher Kurt Felix imparted to these gatherings a pioneer spirit which is more needed today than in the past particularly because we are now 500 rather than 50 to 100 participants Indeed we as organizers have had to ask ourselves whether it is still possible to have an exciting lecture series combined with the leisure and opportunity for spontaneous questioning and stimulating individual discussion

Permeability of Biological Membranes Gaspar Banfalvi, 2016-02-10 This book deals with biological membranes focuses on permeabilization and pays particular attention to reversible permeabilization to maintain the viability and physiological conditions of the cells Selective permeability of biological membranes also known as semipermeability partial permeability or differential permeability allows molecules to diffuse pass by passive and active or by other types of transport processes mediated by proteins The first chapter of the book deals with the composition of biological membranes characterizes cellular membranes of prokaryotic eukaryotic cells membranes of cellular organelles and the function of biological membranes The second chapter provides an overview of bilayer permeability selectivity of permeabilization and cellular transport processes Chapter 3 overviews different cell manipulations that aim to make cells permeable while maintaining not only the structural but also the functional integrity of cells The last chapter deals with applications particularly with reversible permeabilization to study macromolecular DNA RNA poly ADP ribose biosynthetic processes replication gene expression visualization of replicons intermediates of chromosome condensation genotoxic chromatin changes upon treatment with heavy metals and different types of irradiation The interdisciplinary aspects of the book contribute to the understanding of the structure of nucleic acids replicative intermediates Okazaki fragments RNA primer mechanism subphases of replication and repair synthesis replicons gene expression chromosome condensation generated a wealth of information that will attract a wide

readership The natural audience engaged in DNA research including genetics cell and molecular biology chemistry biochemistry medicine pharmacy will find essential material in the book
