Mind-Altering Drugs Mitch Earleywine, 2005-04-14 At least one of every three Americans has used an illicit drug Drugs attract considerable attention in science legislation and the media Nonetheless many people develop attitudes about drugs and drug users based on limited information Researchers often find themselves divided into camps based on the drug they study most often which limits their ability to benefit from important work done on other drugs As a result government policies form without a complete understanding of the intoxication experience What is the nature of intoxication At first this question appears to be simple and straightforward but upon closer inspection the dichotomous distinctions between everyday awareness and its alternatives grow fuzzy An in depth examination of the subjective effects of drugs and the pursuit of altered states soon leads to age old questions about free will heredity environment and consciousness Mind Altering Drugs is the first book to bring together chapters from leading researchers that present diverse empirically based insights into the subjective experiences of drugs and their links to addictive potential By avoiding simple depictions of psychoactive chemicals and the people who use them these recognized experts explain how modern research in many fields reveals a complex interaction between people situations and substances Their work demonstrates that only a multitude of approaches can show the nuances of subjective experience and that each substance may create a different effect with every administration in each user Simple references to physiological underpinnings or positive reinforcement fail to explain the diverse responses to drugs However research has progressed to reveal broad repeatable evidence that the subjective effects of substances play an important role in our understanding of drug abuse and so should inform our decisions about policy This thorough and accessible review of the subjective effects of drugs and the dominant theories behind those effects will provide a wealth of information about the experience of intoxication for lay readers and a road map to studies in other disciplines for student and professional researchers

Buzz Stephen Braun, 1996-10-31 Alcohol and caffeine are deeply woven into the fabric of life for most of the world's population as close and as comfortable as a cup of coffee or a can of beer Yet for most people they remain as mysterious and unpredictable as the spirits they were once thought to be Now in Buzz Stephen Braun takes us on a myth shattering tour of these two popular substances one that blends fascinating science with colorful lore and that includes cameo appearances by Shakespeare and Balzac Buddhist monks and Arabian goat herders even Mikhail Gorbachev and David Letterman who once quipped If it weren't for the coffee I'd have no identifiable personality whatsoever Much of what Braun reveals directly contradicts conventional wisdom about alcohol and caffeine Braun shows for instance that alcohol is not simply a depressant as popularly believed but is instead a pharmacy in a bottle mimicking the action of drugs such as cocaine amphetamine valium and opium At low doses it increases electrical activity in the same brain systems affected by stimulants influences the same circuits targeted by

valium and causes the release of morphine like compounds known as endorphins all at the same time This explains why alcohol can produce a range of reactions from boisterous euphoria to dark brooding hopelessness Braun also shatters the myth that alcohol kills brain cells reveals why wood alcohol or methanol causes blindness and explains the biological reason behind the one drink per hour sobriety rule that s how long it takes the liver working full tilt to disable the 200 quintillion ethanol molecules found in a typical drink The author then turns to caffeine and shows it to be no less remarkable We discover that more than 100 plant species produce caffeine molecules in their seeds leaves or bark a truly amazing distribution throughout nature nicotine in comparison is found only in tobacco opium only in the poppy It s not surprising then that caffeine is far and away the most widely used mind altering substance on the planet found in tea coffee cocoa chocolate soft drinks and more than 2 000 non prescription drugs Tea is the most popular drink on earth with coffee a close second Braun also explores the role of caffeine in creativity Johann Sebastian Bach for one loved coffee so much he wrote a Coffee Cantata as Braun notes no music captures the caffeinated experience better than one of Bachs frenetic fugues Balzac would work for 12 hours non stop drinking coffee all the while and Kant Rousseau and Voltaire all loved coffee And throughout the book Braun takes us on many engaging factual sidetrips we learn for instance that Theodore Roosevelt coined the phrase Good to the last drop used by Maxwell House ever since that distances between Tibetan villages are sometimes reckoned by the number of cups of tea needed to sustain a person three cups being roughly 8 kilometers and that John Pemberton s original recipe for Coca Cola included not only kola extract but also cocaine Whether you are a sophisticated consumer of cabernet sauvignon and Kenya AA or just someone who needs a cup of joe in the morning and a cold one after work you will find Buzz to be an eye opening informative and often amusing look at two substances at once utterly familiar and deeply mysterious
