Current Concepts of Diagnosis and Treatment of Bone and Soft Tissue Tumors E. Stahl, H. K. Uthoff, 2012-12-06 During the past decade the prognosis of bone and soft tissue tumors has improved considerably This progress has not only been due to improved therapeutics and diagnostic methods but also due to a team approach now universally adopted Comparison of results possible today were hampered in the past by lack of a clinically relevant staging system and definitive treatment protocols The complexity of the therapeutic management of bone tumors requires a constant exposure to tumors highly skilled diagnostic techniques and specialized expertise It is therefore not surprising to learn that small and medium sized hospitals embarking on the diagnosis and treatment of bone and soft tissue tumors are generally less successful than better equipped major centers This fact has already been recognized by most physicians and surgeons who now refer their patients to specialized oncologic centers Nevertheless they all have to know the present state of the art This symposium was

therefore mostly addressed to them This international symposium organized by the Division of Orthopaedic Surgery University of Ottawa and cosponsored by the Association des Chirugiens Orthopedistes du Quebec was held in Ottawa from May 12 14 1983 Each of the 40 presentations clearly demonstrates that disregard for proper staging before initiation of treatment and omission of a clearly defined treatment protocol is definitely unacceptable in view of the knowledge we have acquired
