Bones For Barnum Brown Adventures Of A Dinosaur Hunter:

Bones for Barnum Brown Roland T. Bird, 2013-05-31 Roland Thaxter Bird universally and affectionately known to friends and associates as R T achieved a kind of Horatio Alger success in the scientific world of dinosaur studies Forced to drop out of school at a young age by ill health he was a cowboy who traveled from job to job by motorcycle until he met Barnum Brown Curator of Vertebrae Paleontology at the American Museum of Natural History in New York and a leader in the study of dinosaurs Beginning in 1934 Bird spent many years as an employee of the museum and as Brown s right hand man in the field His chart of the Howe Quarry in Wyoming a massive sauropod boneyard is one of the most complex paleontological charts ever produced and a work of art in its own right His crowning achievement was the discovery collection and interpretation of gigantic Cretaceous dinosaur trackways along the Paluxy River near Glen Rose and at Bandera Texas A trackway from Glen Rose is on exhibit at the American Museum and at the Texas Memorial Museum in Austin His interpretation of these trackways demonstrated that a large carnosaur had pursued and attacked a sauropod that sauropods migrated in herds and that contrary to then current belief sauropods were able to support their own weight out of deep water These behavioral interpretations anticipated later dinosaur studies by at least two decades From his first meeting with Barnum Brown to his discoveries at Glen Rose and Bandera this very human account tells the story of Bird s remarkable work on dinosaurs In a vibrantly descriptive style Bird recorded both the intensity and excitement of field work and the careful and painstaking detail of laboratory reconstruction His memoir presents a vivid picture of camp life with Brown and the inner workings of the famous American Museum of Natural History and it offers a new and humanizing account of Brown himself one of the giants of his field Bird s memoir has been supplemented with a clear and concise introduction to the field of dinosaur study and with generous illustrations which delineate the various types of dinosaurs **Bones for Barnum**

Lockley, 1989 This is the first book ever to be devoted to this subject **Noah's Ravens** James O. Farlow, 2018-10-08 How can the tracks of dinosaurs best be interpreted and used to reconstruct them In many Mesozoic sedimentary rock formations

fossilized footprints of bipedal three toed tridactyl dinosaurs are preserved in huge numbers often with few or no skeletons Such tracks sometimes provide the only clues to the former presence of dinosaurs but their interpretation can be challenging How different in size and shape can footprints be and yet have been made by the same kind of dinosaur How similar can they be and yet have been made by different kinds of dinosaurs To what extent can tridactyl dinosaur footprints serve as proxies for the biodiversity of their makers Profusely illustrated and meticulously researched Noah s Ravens quantitatively explores a variety of approaches to interpreting the tracks carefully examining within species and across species variability in foot and footprint shape in nonavian dinosaurs and their close living relatives The results help decipher one of the world s most important assemblages of fossil dinosaur tracks found in sedimentary rocks deposited in ancient rift valleys of eastern North America Those often beautifully preserved tracks were among the first studied by paleontologists and they were initially interpreted as having been made by big birds one of which was jokingly identified as Noah s legendary raven
