Trevelyan, 2013-09-03 This volume aims to provide the reader with a broad cross section of empirical research being carried out into engineers at work The chapters provide pointers to other relevant studies over recent decades an important aspect we believe because this area has only recently begun to coalesce as a field of study and up to now relevant empirical research has tended to be published across a range of academic disciplines This lack of readily available literature might explain why contemporary notions of engineering have drifted far from the realities of practice and are in urgent need of revision The principal focus is on what empirical studies tell us about the social and technical aspects of engineering practice and the mutual interaction between the two After a foreword by Gary Lee Downey the research presented by the various chapter authors is based on empirical data from studies of engineers working in a variety of global settings that include Australia Ireland Portugal South Asia Switzerland the UK and the US The following groups of readers are addressed

researchers and students with an interest in engineering practice professional engineers particularly those interested in research on engineering practice engineering educators people who employ recruit or work with engineers Providing a much clearer picture of engineering practice and its variations than has been available until now the book is of interest to engineers and those who work with them At the same time it provides invaluable resource material for educators who are aiming for more authentic learning experiences in their classrooms Further information visit the website Engineering Practice in a Global Context Online <http://epr.ist.utl.pt/EPGC>

Digital Fabrication in Architecture, Engineering and Construction Luca Caneparo, 2013-10-02 Digital technologies are changing the

relationship between design and construction with computer models CAD CAM and prototyping designers can gain direct control of building and construction processes The ability to digitally model designs and thus to use those models directly in the context of production creates a synthesis between design and construction in keeping with the tradition of the close relationship between design and craftsmanship between the quality of the design and the rules of the craft The evolution of the culture of design and construction is the underlying theme of this book The aim is to discuss the direction that innovation is now taking with a particular focus on today's cutting edge architectures The method addresses the ways in which different societies have dealt with the issues of their age regarding design and construction the different contributions provided by various techniques and with them the meanings expressed by the architecture As building design using digital tools requires specific skills in the fabrication processes and in the languages used by information technology the book also offers a practical guide to new methods and techniques of managing and controlling fabrication for AEC A systematic analysis of new skills used in the design process presents an overview of opportunities for architects and engineers By collecting information on significant projects and analyzing them the book explores the technical and artistic potential of digital technology The cases studied are the outcomes of groundbreaking projects which were able to give form and significance to technological research They show that digital tools are not the exclusive prerogative of large firms but can also be adopted by teams working across small and medium sized firms firms which have been able to use informed research to link innovative design with the possibilities offered by digital fabrication in architecture
