Participation in EU Rule-making Joana Mendes, 2011-04-07

The limited scope of participation in the making of EU law remains a continued source of controversy featuring prominently in recent institutional and political developments that have been shaping the EU's constitutional framework most intensely in the follow up of the Commission's White Paper on Governance. Yet little attention has been paid to participation rights as a means of ensuring the procedural protection of persons affected by EU regulation in its diverse forms. This is a dimension of the rule of law that has been largely ignored by EU legislative and judicial bodies. Not only the legislator but also the Court of Justice and the Court of First Instance tend to adhere to excessively formal conceptions of participation rights that are premised on the right to be heard in individual procedures as well as to a restrictive view regarding the relationships between the citizens and the administration. This book shows why in the face of new regulatory developments these conceptions are currently inadequate to ensure the legal protection of rights and interests affected by EU regulation. Combining a conceptual analysis with thorough empirical scrutiny, this book assesses the scope of participation rights in EU law against their rationales and underlying legal values. It makes a case for the extension of participation rights to new situations and new types of procedures, in particular those that would generally fall within the category of rulemaking. It brings distinct normative insights into a crucial theme of EU administrative law and makes a topical and timely contribution to the increasingly notable theme of public participation in EU regulation. Joanna Mendes 2009 thesis upon which *Participation in EU Rule Making* is based was awarded the the European University Institute Florence Mauro Cappelletti Prize for the best doctoral thesis using a methodology of comparative law. *Deference in International Courts and Tribunals* Lukasz Gruszczynski, Wouter G. Werner, 2014. International courts use two key methodologies to determine the degree of deference granted to states in their implementation of international obligations: the standard of review and margin of appreciation. This book investigates how these doctrines are applied in international courts, analysing where their approaches converge and diverge. **Efficiency of heat and work in a regional energy system** Tommy

Rosén, 2019-12-11. One of the largest flows of energy in Swedish municipalities is the fuel energy flow through the regional combined heat and power (CHP) plant. The customer products from this flow are mainly electricity to the electricity grid and heat to the building sector. There are many ways to describe and examine this fuel energy flow and there are many perspectives. This thesis presents one perspective. It is a top-down analytical and numerical perspective on the efficiency of heat and work in a regional energy system. The analysis focuses on the present situation in Linköping municipality and aims at describing the energy efficiency improvement potential. Three subsystems are considered: the regional production of electricity, the regional production of heat, and the regional public transport by bus. These three systems are physically all heat engines, i.e. engines that derive work and/or heat from fuel combustion processes. It is important to notice that the analysis in this thesis does not describe the theoretical improvement potential; that potential is considerably higher than the

implementable potential but of no practical use. Instead the analysis is as far as possible based on real world measured efficiencies and efficiency values of best practice. Best available technology. The analysis shows that hardware investments at the CHP plant can improve the electricity generation efficiency and thereby reduce CO₂ emissions. The investments are in high pressure turbines, medium pressure turbines and preheaters. The size of the improvement is hard to quantify because it depends partly on unknown factors in the surrounding electricity market. In the studied system CO₂ reduction could be as high as 40-60 %. The regionally produced biogas would be used more efficiently if it were used in the local combined cycle gas turbine instead of being used in internal combustion engines in buses. The buses would instead be electrically driven. This use of biogas would create a better integrated fuel energy flow and reduce heat losses. Another improvement is to reduce the system temperatures in the district heating system. The study shows that the efficiency gains because of lower system temperatures would increase electricity production by about 1-3% and that greenhouse gas emissions would be reduced by 4-20%. However these improvements are dependent on demand side investments in the district heating system and are therefore slow to implement.

Ett av de största energiflödena i svenska kommuner är bränsleenergi från det regionala kraftverket. De konsumentprodukter som detta energiflöde producerar är främst uppvärmning av bostäder och elkraft. Det finns många sätt att beskriva och utvärdera detta bränsleenergi flöde och det finns många olika perspektiv. Det här arbetet analyserar energiflödet med en analytisk top-down metod. Analysen utgår ifrån den nuvarande situationen i Linköpings kommun och avser att belysa den förbränningspotential som finns med avseende på systemets verkningsgrad. Tre delsystem har studerats: det regionala systemet för värmeproduktion, det regionala systemet för elproduktion och det regionala kollektivtrafiksystemet för innerstadstrafik med buss. Dessa tre system är fysikaliskt värmemotorer i de system som nyttjar termisk energi från förbränningsprocesser för att utföra ett arbete och/eller generera värme. Det är viktigt att notera att analyserna i detta arbete inte avser att beskriva en teoretisk förbränningspotential. Analyserna avser istället att belysa den praktiska implementerbara förbränningspotentialen. Därför har arbetet så långt som möjligt utgått ifrån uppmätta data och numeriska värden på verkningsgrader ifrån redan existerande anläggningar eller tekniska komponenter. Analyserna visar att hushållsinvesteringskostnader i det lokala kraftverket skulle öka elproduktionen och därigenom sänka koldioxidutsläppen. De investeringar som skulle behövas för gas- och ångturbiner mellan ångturbiner och förvärmare skulle sänka koldioxidutsläppen och svåra att kvantifiera eftersom de delvis beror på olika faktorer på den omgivande elmarknaden. Reduktionen av koldioxidutsläppen skulle kunna vara så stor som 40-60 %. Den lokalt producerade biogasen skulle användas mer effektivt om den användes i den lokala gaskombi anläggningen istället för att användas som bussbränsle som är det nuvarande användningsområdet för detta bränsle. Bussarna skulle istället kunna ersättas med elbussar. En sådan förändring av biogas användningen skulle innebära ett bättre integrerat energisystem med lågre värmefluster. En annan möjlig förbättring av kraftverksystemet är att sänka returtemperaturerna i fjärrvärmesystemet. Analyserna visar att elverkningsgraden skulle förbättras 1-3 % och att koldioxidutslä

ppen skulle kunna minska med 4 20 % Dessa f rb ttringar skulle d remot kr va investeringar p kraftv rmesystemets kundsida och bed ms d rf r vara l ngsamma att implementera *Export-Import Theory, Practices, and Procedures* Belay Seyoum,2008-10-15 *Export Import Theory Practices and Procedures* is the first book on the market to truly serve the needs of the academic professional audience going beyond the usual soft coverage of international trade operations Discussing theoretical issues in depth such as the role of exports imports in the global economy and pertinent regulatory and policy issues this innovative text offers comprehensive explorations of import processes as well as export activities and incorporates the most relevant and current research information in these areas New to this edition are important discussions of trends in regional integration agreements international transfer pricing terms of sale US export regulations export financing programs and more Expanded coverage in this edition of topics such as taxation of international trade operations export counseling export channels of distribution export sales contracts transportation import procedures and techniques and more Other topics include Exploration of trade agreements such as the GATT WTO NAFTA and the European Economic Community EEC and how they affect trade In depth treatment of investment and intellectual property policies rules on government procurements safeguard and services of NAFTA Documentation risks and different forms of insurance as well as assessing the risks of foreign trade Price setting in international trade export sales contracts exchange rates methods of payment for exporting and importing goods the benefits and theories of countertrade the entry process for imports and import relief to domestic industry *Export Import Theory Practices and Procedures Second Edition* combines an innovative conceptual and theoretical approach a deep and broad analytical treatment and an engaging and accessible presentation style to offer one of the most useful textbooks on the market for students and practitioners alike Further instructors materials can be accessed via www.nova.edu/seyoum *Controversies in Innocence Cases in America* Ms Sarah Lucy Cooper,2014-05-28 This volume brings together leading experts on the investigation litigation and scholarly analysis of innocence cases in America from legal political and ethical perspectives The contributors consider the challenges faced by the exoneration movement causes of wrongful convictions problems associated with investigating proving and defining innocence and theories of reform These issues are investigated from a multi disciplinary perspective and with the aim of improving the American criminal justice system when it is faced with its most harrowing sight an innocent defendant **Intelligent Data Analytics for Power and Energy Systems** Hasmat Malik,Md.
