Book Production Procedures for Today's Technology , **Application of Solar Technology to Today's Energy Needs** United States. Congress. Office of Technology Assessment, 1978 **The Ethics of Today's Science and Technology** Wenchao Li, Hans Poser, 2008 Beneath the discussion and clarification of problems of which both sides agreed to have them in common and which are documented in this volume one of the important insights on both sides had been disagreements depending on a different way in seeing articulating and reflecting on these problems So the English term science in differing from the German Wissenschaft which includes not only sciences of nature but also humanities is meant in the Western tradition as the uninterested research for truth especially for most general laws but the Chinese understanding seems to be characterized by an immediate connection of science and its practical use *Biohydrogen Production: Sustainability of Current Technology and Future Perspective* Anoop Singh, Dheeraj Rathore, 2016-08-22 Increase in green renewable and sustainable energy demand due to higher environmental impacts e.g. Greenhouse gases emissions climate change etc on consumption of fossil fuel resource put down an extra pressure on government researchers and industrialists Among several available biofuel options biohydrogen is considered as one of the best environmentally clean fuel and a strong candidate to fulfil the future demand of sustainable energy resource Although biohydrogen production technology and its use as a fuel is still in infancy stage Selection of most sustainable production pathway increase in production upto industrial scale and cost efficiency are some issues still persist with the biohydrogen research Biohydrogen Production Sustainability of Current Technology and Future Perspective is giving an insight for the sustainable production of biohydrogen at industrial scale The process of biohydrogen production is complex and to opt the best suited production system for industrial scale is a frantic task This book will provide an in depth information on all available technologies for biohydrogen production and feedstock options to choose upon This book is also providing information on present status of the research in the field and possibility to change future fuel economy in to biohydrogen economy Experts views provided in the chapters by renowned researchers from all over the globe in the field of biohydrogen research made this book a cornucopia of present research and future perspective of biohydrogen This book is targeted at the researchers working on biohydrogen as well as the bioenergy scientist planning to move towards biohydrogen research This book will provide a platform for motivation of researchers and industrialists for innovative ideas and thoughts to bring biohydrogen production at industrial scale **Current Research in Pharmaceutical Technology** Sabine Globig, William Hunter Jr., 2011-12-15 This title includes a number of Open Access chapters Pharmaceutical technology deals with the discovery production processing and safe and effective delivery of medications to patients Technologies involved include computer modeling for research bioengineering for research instrumentation processes and methods for increasing production and c **Current State of Manufacturing in the United States** United States. Biojet Fuel: Current Technology and Future Prospect Arindam

Kuila,2024-02-20 This book covers the basic knowledge of biojet fuel explores the current technological status and presents future prospects for commercial biojet fuel production The focus of this book is on biojet fuel production from different types of potential substrates It also includes technoeconomic analysis and life cycle assessment of biojet fuel Biojet fuel is currently recognized as the best alternative to petroleum based jet fuel due to its renewability and sustainable features However there is a scarcity of reports on biojet fuel production from various types of substrates The aviation industry globally consumes approximately 200 million tonnes of jet fuels each year with a projected continuous growth rate of 5% per year until 2050 Seymour et al 2020 Currently the global demand for jet fuel is predominantly met by petroleum based fuels However the limited availability of fossil fuels and increasing concerns about climate change have placed significant pressure on commercial airlines to reduce greenhouse gas emissions and embrace cleaner and more sustainable practices Biojet fuel has emerged as the most favorable alternative to petroleum based jet fuel due to its renewable nature and sustainable characteristics Despite its potential there is a limited number of reports available on the production of biojet fuel from different types of substrates The present scenario of biojet fuel necessitates the development of improved and cost effective technologies that can yield long term benefits The book is useful for students and researchers in various branches of life sciences including environmental biotechnology bioprocess engineering renewable energy chemical engineering nanotechnology biotechnology microbiology and more *Current Status and Future Technical and Economic Potential of Light Water Reactors* U.S. Atomic Energy Commission.
