

A study reported in *The Accounting Review* examined the separate and joint effects of two levels of time pressure (low and moderate) and three levels of knowledge (naïve, declarative, and procedural) on key word selection behavior in tax research. Subjects were given a tax case containing a set of facts, a tax issue, and a key word index consisting of 1336 key words. They were asked to select the key words they believed would refer them to a tax authority relevant to resolving the tax case. Prior to the experiment, a group of tax experts determined that the text contained 19 relevant key words. Subjects in the naïve group had little or no declarative or procedural knowledge, subjects in the declarative group had significant declarative knowledge but little or no procedural knowledge, and subjects in the procedural group had significant declarative knowledge and procedural knowledge. Declarative knowledge consists of knowledge of both the applicable tax rules and the technical terms used to describe such rules. Procedural knowledge is knowledge of the rules that guide the tax researcher's search for relevant key words. Subjects in the low time pressure situation were told they had 25 minutes to complete the problem, an amount of time which should be "more than adequate" to complete the case; subjects in the moderate time pressure situation were told they would have "only" 11 minutes to complete the case. Suppose 25 subjects were selected for each of the six treatment combinations and the sample means for each treatment combination are as follows (standard deviations are in parentheses).

Excel File: [data13-33.xlsx](#)

		Knowledge		
		Naïve	Declarative	Procedural
Time Pressure	Low	1.13 (1.12)	1.56 (1.33)	2.00 (1.54)
	Moderate	0.48 (0.80)	1.68 (1.36)	2.86 (1.80)

Use the ANOVA procedure to test for any significant differences due to time pressure, knowledge, and interaction. Use a 0.05 level of significance. Assume that the total sum of squares for this experiment is 327.50.

Letting Time Pressure be Factor A and Knowledge be Factor B, show the entries in the ANOVA table (to 2 decimals, if necessary). Do not round

the occupation's early termination in a peace treaty. Although these expectations have been proven to be too high for most occupants, they nevertheless serve as yardsticks that measure the level of compliance of the occupants with international law. This thoroughly revised edition of the 1993 book traces the evolution of the law of occupation from its inception during the 18th century until today. It offers an assessment of the law by focusing on state practice of the various occupants and reactions thereto and on the governing legal texts and judicial decisions. The underlying thought that informs and structures the book suggests that this body of laws has been shaped by changing conceptions about war and sovereignty by the growing attention to human rights and the right to self-determination as well as by changes in the balance of power among states. Because the law of occupation indirectly protects the sovereign, occupation law can be seen as the mirror image of the law on sovereignty. Shifting perceptions on sovereign authority are therefore bound to be reflected also in the law of occupation and vice versa.

**Advances in Electromagnetics of Complex Media and Metamaterials** Saïd Zouhdi, Ari Sihvola, Mohamed Arsalane, 2002. The electromagnetics of complex media and metamaterials is a field that is making very rapid progress so that books that are only a couple of years old become soon outdated. This book treats very many aspects of new materials from their electromagnetic response point of view: chiral, anisotropic, magnetic, photonic band gap media and especially the new type of metamaterial Veselago medium material with simultaneously negative permittivity and permeability. Analytical, numerical, model-based and experimental aspects are all considered. The book is intended for researchers and specialists in the fields of electromagnetics of new materials but people who wish to enter the field will also find it a great help in getting acquainted with the problems in this area since the articles are mostly reviews that also include the most up-to-date information about electromagnetics and complex materials.
