Collecting by Region

In the north, tamarack or larch, *Larix laricina*, is a handsome species for bonsai. It spans the North American continent from Alaska through Canada and Nova Scotia to the northeastern United States.

Along the Keys and the southernmost part of Florida, buttonwoods, *Coccoloba erectus*, with their naturally weathered old trunks and compact branching provide outstanding bonsai material for warm climates.

As collected material, the California juniper, *Juniperus californica*, from Sierra Nevada and other high elevations, rivals the famous shimpaku juniper of Japan. Two examples may be seen in Figs. 2-5 and 12-3.

Farther west, in Hawaii, one of the loveliest collected species is *Metrosideros collinus*, with beautiful crimson flowers (Fig. 2-9). It is hard to find on the desolate lava formations on the island of Hawaii.

The Rocky Mountains are an excellent collecting area for many species, including such species as limber pine (Fig. 17-14), ponderosa pine (Fig. 17-12),

and Rocky Mountain juniper (Fig. 17-13). medium to large in size, it is possible to obtain the sagebrush in Fig. 17-15, collected in Utah.

For other species of trees and shrubs to collect in the wild, consult the lists of native American regions in Chapter 2.
