## **Abstract Sex Philosophy Biotechnology And The Mutations Of Desire:**

**Abstract Sex** Luciana Parisi, 2004 *Abstract Sex* investigates the impact of advances in contemporary science and information technology on conceptions of sex. Evolutionary theory and the technologies of viral information transfer, cloning, and genetic engineering are changing the way we think about human sex, reproduction, and the communication of genetic information. *Abstract Sex* presents a philosophical exploration of this new world of sexual informatic and capitalist multiplicity of the accelerated mutation of nature and culture.

*Ontohackers: Radical Movement Philosophy in the Age of Extinctions and Algorithms, Part I* Jaime Del Val, 2024-05-15 *Ontohackers* redefines what movement worlds and bodies are through the sense of proprioception reconceptualized as formless fluctuation field, a movement matrix that is itself also thought and which underlies all life forms and fields, including the inorganic. Our worlds are made of endless such entangled fields, folding in never-ending variation or enframement. The current planetary crisis has emerged due to an accidental evolutionary alignment, narrowing and impoverishment of that matrix's indeterminacy that appeared gradually and eventually with bipedalism and which created an imbalance between the larger proprioceptive field and its brain and made the atrophied body extend itself technically in geometric fields, gradually covering the planet along with its fears, with disastrous consequences that are unleashing an unprecedented type of mass extinction and species suicide. The reply to this crisis, which is urgently due if we are to reduce even slightly the collapse coming up over the next decades, is in recovering a lost sensorimotor plasticity, which is also cognitive, affective, and relational plasticity through developing movement techniques for cultivating Body Intelligence (BI), reversing and taking elsewhere the failed evolution culminating in AI stepping down from humanist supremacist pedestals, undoing our dependency from unsustainable killing machines of sedentary consumerism that impoverish experience, stopping the reproduction of a species that has become plague by reversing heteronormative reproductive dogmas till we reach preagricultural population levels and recovering the joys of moving with the world in symbiotic mutation towards unprecedented evolutionary variations; this is our cosmic responsibility for all life on Earth. The book's structure expresses Enframement Theory with regard to how processes of becoming have a triple movement: an incipience, unfolding the field; Part I, a condensation/expansion where the field acquires full consistency; Part II, and a resonance or memory of the field relating to other fields; Part III. Part I includes Books 1 to 3 out of 7. The preface sets the context of the book, the extinction crisis. Book 1 provides an introduction to the entire field of the book and metareflects on the book's structure and process. Book 2 is a full treatise on proprioception, developing the theory of Body Intelligence and addressing core issues of cognition, perception, communication, and an ontological redefinition of the body as proprioceptive swarm. Book 3 develops all core concepts of Radical Movement Philosophy, unfolding into several sections: first introducing the fluctuation field and swarm theory; secondly, the core concepts of *clinaos*, indeterminacy, metabody consistency, and intraduction/variation coming together in the concept of enframement. Finally, another triad further unfolds the previous as

rhythm affect orientation desire and contact sex closing with an orgiastic cosmo ontology that opens the way to Part II

Silva, 2021-09-24 Contemporary philosophical research interconnects classical domains of philosophy the arts literature and social sciences This collection of essays explores the operational role of experimentation dissidence and heterogeneity in this process It offers fundaments for the criticism of monolithical tendencies often put forward under the banner of the Speculative Turn or New Realism by means of exploring the contribution and influence of authors such as J G Hamann Kierkegaard Nietzsche and Guy Debord These philosophers historically placed within the margins of the philosophical mainstream were decisive in the emergence of the philosophical thought and practices of Deleuze Wittgenstein and Bataille as shown here The reader will also find re evaluations of the contributions of Vico Spinoza or Kant to posterity next to new readings of authors like Foucault Hadot Benjamin and Adorno with regards to their significant experimental and dissident positions

**Queer Environmentality** Robert Azzarello, 2016-04-15 Offering a model for meaningful dialogue between queer studies and environmental studies Robert Azzarello s book traces a queer environmental lineage in American Romantic and post Romantic literature Azzarello challenges the notion that reading environmental literature is unsatisfying in terms of aesthetics and proposes an understanding of literary environmentalism that is rich in poetic complexity With the term queer environmentality Azzarello points towards a queer sensibility in the history of environmental literature to balance the dominant narrative that reading environmental literature is tantamount to witnessing a spectacular dramatization of heterosexual teleology Azzarello s study treats four key figures in the American literary tradition Henry David Thoreau Herman Melville Willa Cather and Djuna Barnes Each of these writers problematizes conventional notions of the strange matrix between the human the natural and the sexual They brilliantly demonstrate the ways in which the queer project and the environmental project are always connected or put another way show that questions and politics of human sexuality are always entwined with those associated with the other than human world

sexuality a shift away from discourse identity and signification to a radical new conception of bodily materialism Moving away from the established path known as queer theory it suggests an alternative to Butler's matter representation binary It thus dares to ask how to think sexuality and sex outside the discursive and linguistic context that has come to dominate contemporary research in social sciences and humanities Deleuze and Queer Theory is a provocative and often militant collection that explores a diverse range of themes including the revisiting of the term queer a rethinking of the sex gender distinction as being implied in Queer Theory an exploration of queer temporalities the non-re-reading of the homosexual body desire and the becoming queer of the Deleuze Guattari philosophy It will be essential reading for anyone interested not just in Deleuze's and Guattari's philosophy but also in the fields of sexuality gender and feminist theory
