Stewart, 1988 Ultrasound in Liquid and Solid Metals focuses on the effect of intensive ultrasound on metals including the analysis of the development of cavitation and acoustic flows in melts mechanism of metals spraying and crystallization the formation of dislocation structure in crystals diffusion phase transformation and plastic deformation Physical fundamentals of intensive ultrasound effects are covered and detailed discussions are presented on the engineering principles of equipment and material design for the practical use of ultrasound in the refining of melts crystallization of ingots and molds pulverization plating pressure working of metals surface strengthening and other processes *Cranial Nerves*, 1988 *Neuroanatomical Basis of Clinical Neurology* Orhan E. Arslan, 2001-08-15 Superbly illustrated and clearly written Neuroanatomical Basis of Clinical Neurology bridges the gap between the twin disciplines of neuroanatomy and neurology aiding the understanding of neurologic disorders by investigating their anatomic basis The extensive coverage of the peripheral and central nervous systems in the context of neurological disorders and conditions sets it apart from other neuroanatomy texts The book covers both morphological and functional aspects of neuroanatomy It describes the anatomy of each component of the central peripheral and somatic nervous systems in detail and then demonstrates the relationship between neuroanatomy and the function of the sensory and motor systems The author has skilfully integrated text and diagrams highlighting and clarifying the numerous functionally important pathways in the central and peripheral nervous systems In addition he includes descriptions of molecular pathways within cells and the ways in which their perturbation can give rise to disease mechanisms The extensive illustrations and comprehensive coverage combine to make Neuroanatomical Basis of Clinical Neurology an extraordinarily complete resource to the human nervous system and the principles of neuroscience *Integrated Neuroscience and Neurology* Elliott M. Marcus, Stanley Jacobson, Thomas D. Sabin, 2014 This online resource addresses the basic questions of clinical neurology It reviews the makeup of the cells within the central nervous system and the development of the regions within the central nervous system followed by a detailed anatomical overview of the nervous system starting at the spinal cord proceeding to the brain stem diencephalon and cerebrum It focuses not only on localized diseases caused by infectious diseases trauma tumours and vascular lesions within the central nervous system but also these diseases within the systems of the brain and spinal cord **Functional Neurology for Practitioners of Manual Medicine** Randy W.
