Ambrósio, Manuel F.O. Seabra Pereira, F. Pina da Silva, 2012-12-06 A systematic treatment of current crashworthiness practice in the automotive railroad and aircraft industries Structural exterior and interior design occupant biomechanics seat and restraint systems are dealt with taking account of statistical data current regulations and state of the art design tool capabilities Occupant kinematics and biomechanics are reviewed leading to a basic understanding of human tolerance to impact and of the use of anthropometric test dummies and mathematical modelling techniques Different types of restraining systems are described in terms of impact biomechanics The material and structural behaviour of vehicle components is discussed in relation to crash testing A variety of commonly used techniques for simulating occupants and structures are presented in particular the use of multibody dynamics finite element methods and simplified macro elements in the context of design tools of increasing complexity which can be used to model both vehicles and occupants Audience An excellent reference for researchers engineers students and all other professionals involved in crashworthiness work
