The book covers in great detail the use of Outlook on a LAN as a client for Microsoft Exchange Server, Microsoft Mail and cc Mail, and it offers expert advice on a multitude of ways to customize Outlook for maximum personal productivity. Special Edition Using Microsoft Outlook 2000 also includes an entire section on developing Outlook-based applications with custom fields, custom forms, VBScript and other Office applications.

How to Give Your Users the LIS Services They Want Sheila Pantry, Peter Griffiths, 2009 In these turbulent times with the challenges of a constantly changing job market, shifting information seeking behaviour and a vast array of new resources continually being produced, library and information services need to constantly keep one step or more ahead of their users. The benefits of analysing user behaviour are self-evident: better strategic planning, cost benefits and better use of budgets, better marketing, satisfied customers, satisfied management and a library or information unit that is central to the needs of your parent organization. However, paradoxically, user needs and levels of expectation, including those of remote users, are often not fully explored. This accessible text goes back to the basics and investigates the following key issues: Why this book? Defining your users. Understanding users: the what, why, where, when, how and who. What is the current knowledge of user behaviour and needs? Is it really predictable? Great expectations: how LIS professionals can manage and train users. Using information about past user behaviour. Making the most of knowing your users. Keeping track of changes in what users want. Tracking the future: electronic and social networking. Future perfect Readership: This book will help any library or information professional anywhere to take a fresh look at this important area and to tackle it in their organization so as to ensure that their users will always obtain exactly what they want. Webmasters and knowledge managers will also find much to interest them.

Pandu Ranga, Wright, Elizabeth, Prasad, Shashidhara, Joshi, Meghana, 2017-02-01 Higher education institutions play a vital role in their surrounding communities Besides providing a space for enhanced learning opportunities universities can utilize their resources for social and economic interests The Handbook of Research on Science Education and University Outreach as a Tool for Regional Development is a comprehensive reference source for the latest scholarly material on the expanded role of universities for community engagement initiatives Providing in depth coverage across a range of topics such as resource sharing educational administration and technological applications this handbook is ideally designed for educators graduate students professionals academics and practitioners interested in the active involvement of education institutions in community outreach Principles of Artificial Intelligence Harry Katzan Jr., 2025-05-05 This book covers the Principles of Artificial Intelligence It is both a text book and a reference book It is one of many books on the subject of artificial intelligence There are more than 400 of them It is the only one that covers principles that is intended to reflect on how to go about doing AI for productive purposes It also covers about what AI is already but it is more than that It answers the question Can a machine think and most people are quite tired of that question In fact people are now more interested in how to do what we want to do In fact AI is an important subject in our lives and here are two outstanding books that atune to that assertion The Singularity is Nearer 2024 by Ray Kurzweil Artificial Intelligence A Modern Approach 1995 by Stuart Russell and Peter Norvig The writers are exceedingly intelligent and the books are useful but not that easy to read University research is equally noteworthy But what about the strategy of adopting AI for the modern operational environment How do you know what to do and how to do it Do you have to be a scientist or a mathematician to do the job Absolutely not Do you need to be a manager a major CEO or even the President of a country Probably yes But you need to have the information to do the job This book gives you what you should do to implement AI in the organization and precisely what you need to know in order to do it When doing the job of implementing should you be knowledgeable about precisely what has to be done Of course Do you personally have to do it Not at all Do you need information on related subjects of course again Do you have to read this book serially Of course not it is too detailed But when you finally get it done properly you do deserve to be a DAI that is a Doctor of Artificial Intelligence That is proposed to be the case in the future Will this be happy reading On some topics yes Other sections not so much There are a lot of pages because the environment of AI is large and complicated Many of the subjects covered in this book will be extremely useful in other areas of business and the organization Artificial Intelligence is an extremely volatile subject It is being adjusted daily and it is almost impossible to figure out what is actually going on The book will be revised and probably copied in content with an air of improvement That is the way the world operates Have a useful and interesting time reading the book It will be

worth the effort One more thing The book is for finding out about AI and associated subjects Who knows what the professional and everyday people want to know The book is for everyone Equally important is the fact that the book is specifically designed for an online college course on AI and supports that assertion by including a substantial choice of subjects for the online professor For example the last section on managing uncertainty is very strongly AI based on the Theory of Evidence through the information on Dempster Shafer Theory The author has been involved with AI since a university 3 week seminar in 1963 for a large corporation and taught one of the first graduate level university courses on AI in 1978 He has been the CEO of Artificial Intelligence Consulting AICON a university professor and an international AI consultant after working for Boeing Oak Ridge National Lab and IBM He has written a few books and a few more peer reviewed papers
