Wilhite,2012-12-06 Drought is an insidious hazard of nature It originates from a deficiency of precipitation that results in a water shortage for some activity or some group Africa has suffered the most dramatic impacts from drought during the past several decades the recent droughts in the southern and eastern portions of the continent are testimony to that fact However the vulnerability of all nations to extended periods of water shortage has been underscored again and again during this same time period In the past decade alone droughts have occurred with considerable frequency and severity in most of the developed and developing world Significant parts of North and South America Australia Europe and Asia have been plagued recently by extended periods of severe drought often resulting in far reaching economic social and environmental consequences In the western United States for example vast areas are facing the prospects of a sixth or seventh consecutive year of drought in 1993 Concern by members of the scientific and policy communities about the inability of governments to respond in an effective and timely manner to drought and its associated impacts exists worldwide Numerous calls for action for improved drought planning and management have been issued by national governments professional organizations intergovernmental organizations nongovernmental organizations and others The United Nations International Decade for Natural Disaster Reduction IDNDR is yet another example of an international call for action to reduce the impacts that result from drought and other natural hazards Methods and Tools for Drought Analysis and Management Giuseppe Rossi,Teodoro Vega,Brunella Bonaccorso,2007-07-26 Implementation of effective drought management policies requires both advanced technologies and appropriate methods Monitoring and forecasting systems practical tools for risk assessment as well as simple and objective criteria to select and implement appropriate drought mitigation measures are key elements for a successful drought management strategy These key issues have been tackled by universities and public agencies involved in the EU projects Sedemed and Sedemed II Programme Interreg IIIB MEDOCC aimed at the definition of an integrated network for real time monitoring of drought the development of common methodologies for drought analysis and forecasting as well as the definition of proper mitigation strategies for the Mediterranean countries The book presents the main outcomes of such projects with a special focus on drought monitoring and forecasting techniques at different spatial scales new or modified agrometeorological indices and remote sensing technique for drought identification and characterization tools to improve surface water resources management under drought conditions methods and tools for groundwater resources monitoring and management based on hydrogeological and hydrodynamics characteristics of aquifers general criteria to select and implement mitigation strategies to prevent or minimize drought impacts *The Arid Frontier* Hendrik J. Bruins,Harvey Lithwick,2012-12-06 The arid frontier has been a challenge for humanity from time immemorial Drylands cover more than one third of the global land surface distributed over

DeChano, 2007-03-01 Reports of natural disasters fill the media with regularity Places in the world are affected by natural disaster events every day Such events include earthquakes cyclones tsunamis wildfires the list could go on for considerable length In the 1990s there was a concentrated focus on natural disaster information and mitigation during the International Decade for Natural Disasters Reduction IDNDR The information was technical and provided the basis for major initiatives in building structures designed

for seismic safety slope stability severe storm warning systems and global monitoring and reporting Mitigation or planning in the event that natural hazards prevalent in a region would suddenly become natural disasters was a major goal of the decade long program During the IDNDR this book was conceptualized and planning for its completion began The editors saw the need for a book that would reach a broad range of readers who were not actively or directly engaged in natural disasters relief or mitigation planning but who were in decision making positions that provided an open window for addressing natural disaster issues Those people were largely elected public officials teachers non governmental organization staff and staff of faith based organizations Those people for the most part come to know very well the human and physical characteristics of the place in which they are based With that local outreach in mind the editors intended the book to encourage readers to 1
