Drug Metabolism Katherine Dunnington, 2021-12-22 Drug metabolism comprises the identification characterization and quantification of the chemicals or compounds produced in an animal or human upon administration of a drug Research practices not only require the chemical structure but also aim to determine the pharmacological activities and or toxicity of these compounds This is first performed in animals as studies attempt to identify and quantify metabolites and later in humans with care to further characterize metabolites that are either unique to or produced disproportionately in humans compared to animals Characterization includes the determination of enzyme systems or other biological mechanisms that produce each identified metabolite this information is used to predict potential drug drug interactions with other compounds that increase or decrease metabolite formation and sources of biological variability in response or toxicity with varying patient genetics which affect CYP isoform expression This book s purpose is to provide some understanding of the biology and current technology applied in the field of drug metabolism

Human Drug Metabolism Michael D. Coleman, 2010-03-30 Human Drug Metabolism An Introduction Second Edition provides an accessible introduction to the subject and will be particularly invaluable to those who already have some understanding of the life sciences Completely

revised and updated throughout the new edition focuses only on essential chemical detail and includes patient case histories to illustrate the clinical consequences of changes in drug metabolism and its impact on patient welfare After underlining the relationship between efficacy toxicity and drug concentration the book then considers how metabolizing systems operate and how they impact upon drug concentration both under drug pressure and during inhibition Factors affecting drug metabolism such as genetic polymorphisms age and diet are discussed and how metabolism can lead to toxicity is explained The book concludes with the role of drug metabolism in the commercial development of therapeutic agents as well as the pharmacology of some illicit drugs

**Drug Metabolism, Pharmacokinetics and Bioanalysis** Hye Suk Lee, Kwang-Hyeon Liu, 2019-06-12. Drug metabolism, pharmacokinetics and drug interaction studies have been extensively carried out in order to secure the druggability and safety of new chemical entities throughout the development of new drugs. Recently drug metabolism and transport by phase II drug metabolizing enzymes and drug transporters respectively as well as phase I drug metabolizing enzymes have been studied. A combination of biochemical advances in the function and regulation of drug metabolizing enzymes and automated analytical technologies are revolutionizing drug metabolism research. There are also potential drug-drug interactions with co-administered drugs due to inhibition and/or induction of drug metabolic enzymes and drug transporters. In addition drug interaction studies have been actively performed to develop substrate cocktails that do not interfere with each other and a simultaneous analytical method of substrate drugs and their metabolites using a tandem mass spectrometer. This Special Issue has the aim of highlighting current progress in drug metabolism, pharmacokinetics, drug interactions and bioanalysis.
