Drug Discovery and Evaluation: Methods in Clinical Pharmacology H. Gerhard Vogel, Jochen Maas, Alexander Gebauer, 2010-12-15 Drug Discovery and Evaluation has become a more and more difficult expensive and time consuming process. The effect of a new compound has to be detected by in vitro and in vivo methods of pharmacology. The activity spectrum and the potency compared to existing drugs have to be determined. As these processes can be divided up stepwise we have designed a book series Drug Discovery and Evaluation in the form of a recommendation document. The methods to detect drug targets are described in the first volume of this series Pharmacological Assays comprising classical methods as well as new technologies. Before going to man the most suitable compound has to be selected by pharmacokinetic studies and experiments in toxicology. These preclinical methods are described in the second volume Safety and Pharmacokinetic Assays. Only then are first studies in human beings allowed. Special rules are established for Phase I studies. Clinical pharmacokinetics are performed in parallel with human studies on tolerability and therapeutic effects. Special studies according to various populations and different therapeutic indications are necessary. These items are covered in the third volume Methods in Clinical Pharmacology

Advances in Peptic Ulcer Pathogenesis W.D. Rees, 2012-12-06 Over the past decade a great deal of research activity has occurred on either side of the gastroduodenal epithelial interface with the common goal of elucidating the mechanisms of mucosal protection and how these may be compromised in peptic ulcer disease A prime stimulus to such research has been the realization that abnormal acid secretion or its delivery into the duodenum in excessive amount cannot fully explain ulcer pathogenesis in the majority of patients One may envisage the stomach and proximal duodenum as being in a dynamic equilibrium with aggressive luminal factors such as acid and pepsin being counteracted by protective mucosal mechanisms Until recently the mechanisms involved in mucosal protection had been poorly defined while the physiology and pathophysiology of acid and pepsin secretion had been elucidated The impression that gastroduodenal mucosa was protected by a single mechanism has at last been replaced by a more realistic view suggesting a number of protective zones acting in series Some of these zones may act as first or second line defences against aggressive factors while certain zones may specifically protect against certain aggressors

Drug Benefits and Risks Christoffel Jos van Boxtel, Budiono Santoso, I.
