Computational Approaches for Identifying Drugs Against Alzheimer's Disease Radha Mahendran, Suganya Jeyabaskar, Astral Gabriella Francis, 2017-05 Alzheimer s disease is the most common form of dementia which is incurable Although some kinds of memory loss are normal during aging these are not severe enough to interfere with the level of function Secretase is an important protease in the pathogenesis of Alzheimer s disease Some statine based peptidomimetics show inhibitory activities to the secretase To explore the inhibitory mechanism molecular docking and three dimensional quantitative structure activity relationship 3D QSAR studies on these analogues were performed Quantitative structure activity relationship QSAR modeling pertains to the construction of predictive models of biological activities as a function of structural and molecular information of a compound library The concept of QSAR has typically been used for drug discovery and development and has gained wide applicability for correlating molecular information with not only biological activities but also with other physicochemical properties which has therefore been termed quantitative structure property relationship QSPR In this study 3D QSAR and pharmacophore mapping studies were carried out using Accelrys Discovery Studio 2 1 The best nine drugs were selected from the 16 ligands and pharmacophore features were generated **Drug Repurposing**

Against SARS-CoV-2 Tabish Qidwai, 2023-04-14 Drug repurposing is a cost effective method of discovering new treatments for diseases than traditional drug development methods It involves virtual screening of chemical candidates with the aid of computational methods like molecular docking Drug Repurposing against SARS CoV2 focuses on current trends in drug repurposing against the novel coronavirus strains The book aims to give readers an overview of drug repurposing against COVID 19 and various techniques involved in the process The book consolidates available information on the pathophysiology drug targets and drug repurposing against COVID 19 into a single convenient resource Key features An up to date compilation of the evidence that supports the drug repurposing for COVID 19 How to use repurposing of available drugs for

disease therapy Provides an improved understanding of pathophysiology and SARS CoV2 viral entry pathways Provides references for further reading

Natural Product Based Drug Discovery Against Human Parasites Archana Singh, Brijesh Rathi, Anita K. Verma, Indrakant K. Singh, 2023-11-27 This book comprehensively reviews current and novel treatment strategies against human parasites including protozoans and helminths using natural products The initial chapters summarize the conventional treatment strategies and natural product based therapeutics against these parasites It discusses biochemical tools and techniques for the discovery of natural product based drugs against human parasites The book also covers the ingenious and innovative mechanisms to achieve drug resistance by the protozoan parasites and strategies to overcome the resistance It entails mechanistic insight into the modulation of host immune responses to delay or inhibit parasite clearance and explores host pathogen interactions that mediate immunity against subsequent parasite challenge In turn the volume helps in understanding the immunobiology of the parasites and tools to identify candidate vaccine antigens and novel delivery systems against the protozoan parasites Lastly it explores the role of advanced methods including nanotechnology marine bioprospecting and microorganisms derived biochemicals against the protozoan parasites This book is useful for students and researchers of pharmacology parasitology zoology and other allied fields

Molecular pharmacological approaches against lung diseases: targeted drug discovery Poonam Arora, Lalit Mohan Nainwal, Seyyed Shamsadin Athari, 2024-07-12 Molecular Pharmacological approaches against lung diseases targeted drug discovery The global burden of lung diseases is rising continuously and is a constant concern Lung diseases of concern including asthma infection pneumonia lung cancer abnormal build up of fluid swelling and inflammation both neoplastic and non neoplastic diseases are listed as the third leading cause of death by the World Health

Organization The most common disease in the lungs includes asthma cystic fibrosis chronic obstructive pulmonary disease etc The respiratory issues listed here among others are exacerbated by environmental toxicants which directly come in contact with the lung architecture thereby causing lung pathologies resulting in the exacerbated immune response in affected patients Biologically active molecules including small or large molecular weight compounds from natural or synthetic sources exhibit prominent pharmacological properties that impact health by modulating disease pathophysiology and influence the ligand receptor interactions depending upon the pathway and their bioavailability

Muhammad Ayaz,Tahir Ali,Abdul Sadiq,Farhat Ullah,Myeong Ok Kim,2020-01-27 New Drugs against Obesity Sarah Schmid,Johan-Mikael Borgen,2024-10-21 The treatment of obesity has advanced considerably in recent years with the introduction of novel medications such as Wegovy Saxenda Ozempic Monjaro Rybelsus Mysimba Contrave Belviq etc These medications usually affect receptors that regulate appetite and metabolism and have helped many patients to lose weight The next generation of anti obesity drugs such as tirzepatid a dual receptor agonist promises even greater success In clinical studies tirzepatid has shown impressive results in weight loss It enables better regulation of metabolism and appetite leading to even greater weight loss In addition to the development of new drugs the question of affordable generics for existing active ingredients also arises Generics help to make effective treatments available to a wider population One example is liraglutide the main component of Saxenda Now that this drug is available as a generic the cost of treatment could soon decrease significantly This is particularly important given that many weight loss drugs are expensive and many patients have limited access to them Future drug treatments may focus on novel targets such as the melanocortin 4 receptor which plays an important role in the regulation of energy expenditure and food intake Research suggests that targeting this receptor could lead to even more sustainable and effective weight loss therapies Another promising approach is personalized medicine in which treatments are tailored to an individual s unique genetic and metabolic profile This could significantly improve the efficacy of weight loss therapies by adapting treatments to the biological needs of the individual Patients who struggle to lose weight due to genetic predispositions could particularly benefit from such tailored approaches The combination of new active ingredients the availability of generics and personalized therapies suggests that in the coming years the medical treatment of obesity could become more and more individualized and accessible This will represent a significant advance in the fight against the global obesity epidemic Revision status October 2024 **Bioactive Natural Products** Steven M.
