Absorption Of Gases:

Collision-induced Absorption in Gases Lothar Frommhold, 1993 This book reviews the present knowledge of collision induced absorption of infrared radiation in the dense common gases Following a brief introduction and review of essential background information such as dipole radiation molecular collisions and interactions numerous experimental results for the absorption spectra of dense gases are presented Other chapters review the causes and properties of dipole moments induced by molecular interactions the theory of collision induced absorption in monatomic gas mixtures and in molecular gases and mixtures The final chapter discusses related phenomena and the important applications in astrophysics Throughout the book the emphasis is on the absorption by binary molecular complexes but the onset of many body effects such as the ternary contributions and the intercollisional process are also considered The volume is meant to be a practical guide and sourcebook for the researcher interested in the spectroscopy of dense neutral fluids This edition includes a new appendix reviewing recent work

The absorption of gases by solids Sidney John Gregg,

Gas Treating Dag Eimer, 2014-08-25 Gas Treating Absorption Theory and Practice provides an introduction to the treatment of natural gas synthesis gas and flue gas addressing why it is necessary and the challenges involved The book concentrates in particular on the absorption desorption process and mass transfer coupled with chemical reaction Following a general introduction to gas treatment the chemistry of CO₂ H₂S and amine systems is described and selected topics from physical chemistry with relevance to gas treating are presented Thereafter the absorption process is discussed in detail column hardware is explained and the traditional mass transfer model mechanisms are presented together with mass transfer correlations This is followed by the central point of the text in which mass transfer is combined with chemical reaction highlighting the associated possibilities and problems Experimental techniques data analysis and modelling are covered and the book concludes with a discussion on various process elements which are important in the absorption

desorption process but are often neglected in its treatment These include heat exchange solution management process flowsheet variations choice of materials and degradation of absorbents The text is rounded off with an overview of the current state of research in this field and a discussion of real world applications This book is a practical introduction to gas treating for practicing process engineers and chemical engineers working on purification technologies and gas treatment in particular those working on CO₂ abatement processes as well as post graduate students in process engineering chemical engineering and chemistry
