A History of Management Accounting Trevor Boyns,J. R. Edwards,2013 There is growing interest in the history of accounting amongst both accounting practitioners and accounting academics This interest developed steadily from about 1970 and really took off in the 1990s However there is a lack of texts dealing with major aspects of accounting history that can be used in classrooms to inform new researchers and to provide a source of reference for established researchers The great deal of research into cost and management accounting in Britain published in academic journals over the last twenty years including the authors own contributions makes The History of Cost and Management Accounting an essential contribution to the field

Accounting by the First Public Company Warwick Funnell,Jeffrey Robertson,2013-11-12 The United Dutch East India Company was the first public company preceding the

formation of the English East India Company by over 40 years. Its fame as the first public company which heralded the transition from feudalism to modern capitalism and its remarkable financial success for nearly two centuries ensure its importance in the history of capitalism. Although a publicly owned highly complex and diversified business and commonly agreed to be the largest and most profitable business in the 17th century throughout its existence, the Dutch East India Company never produced public accounts of its financial affairs which would have allowed investors to judge the performance of the Company. Its financial accounting which changed little during its lifetime was not designed as an aid to rational investment decision making by communicating the Company's financial performance but to be a means of promoting sound stewardship by senior management. This study examines the contributions of accounting to the remarkable success of the Dutch East India Company and the influences on these accounting practices. From the time that the German economic historian Werner Sombart proposed that accounting techniques most especially double entry bookkeeping were critical to the development of modern capitalism and the public company, historians and accounting scholars have debated the extent and importance of these contributions. The Dutch East India Company was a capitalistic enterprise that had a public permanent capital and its principal objective was to continually increase profit by reinvesting its returns in the business. Rather than the organisation and management of the Dutch East India Company reflecting the perceived benefits of a particular bookkeeping method, the supremacy that it achieved and maintained in a very hazardous business at a time of recurring conflict between European states was a consequence of the practicalities of 17th century business and The Netherlands' unique threatening natural environment which shaped its social and political institutions.

Critical Histories of Accounting Richard K. Fleischman, Warwick Funnell, Stephen P. Walker, 2013. The critical tradition in accounting historiography has come to occupy a prominent place in the discipline's academic scholarship. Some critical literature has confronted the responsibility of accounting and accountants in precipitating contemporary crises such as the audit failures that spawned Sarbanes Oxley and the world wide recession. Certain contemporary issues have long histories such as the difficulties encountered by women to break the glass ceiling in public accounting and the suffering of indigenous peoples under the imperialistic yoke. Other episodes in accounting's long history are seemingly more divorced from the present but in reality they all have contemporary significance. Slavery in the New World for example although abolished more than a century ago is still rampant in parts of the world albeit less formally. Critical accounting historians feel it a duty to harken to the suppressed voices of the past those groups of people who had no access to an accounting record women persons of color indigenous populations alienated proletarians victims of governmental incompetence and graft and many voiceless others. **Critical Histories of Accounting: Sinister Inscriptions in the Modern Era** draws on the foremost work in this developing literature both that authored by the co editors of this volume and that written by others. Editors Richard K Fleischman Warwick N Funnell and Steve Walker have written extensively about the dark side of accounting gauging the complicity of

those performing accounting functions in episodes in human history that are at worst evil and at best reprehensible The editors have also hand selected a series of historical and contemporary episodes that have been critically investigated by the wider accounting history community preceded by a thorough introduction Reality and Accounting Richard Mattessich,2013-07-31 This book discusses and summarizes the revived interest in reality issues ontology within accounting economics and the information sciences with a view to informing scholars from these different disciplines about each other s endeavours in ontological research Even more importantly the book aims at familiarizing scholars from various disciplines with an evolutionary approach for examining questions about reality in the social sciences The book is based on a partly pluralistic approach that assures unity in diversity Unity because all existence arises from physical reality diversity because emergent properties create biological and social realities that cannot be reduced to physical phenomena Hence the book recognizes not only concrete but also abstract entities It shows however that the actualization of these abstract entities requires objectification and concrete manifestation This pluralistic approach is central to this book It also is a challenge to those who reject abstract entities as socially real as well as to those who defend a non realist position The major task of this book is to explore proposals towards a uniform ontological basis This uniform and universal presentation extends beyond traditional ontology asking what is real to such questions as on which reality level is something real and in which temporal and modal way is it real Such an extended analysis is relevant to accountants economists information scientists other social scientists as well as philosophers *Double Accounting for Goodwill* Martin Bloom,2013-05-13 Goodwill sometimes purchased but often more significantly internally generated is the major constituent of the value of many listed companies Accounting aims to provide users of financial statements with useful information and more than fifty current International Financial Reporting Standards prescribe accounting disclosure requirements in minute detail However these Standards dismiss internally generated goodwill with a single brief provision that it is not to be brought to account at all The impairment regime now laid down for dealing with purchased goodwill contains severe flaws while previous methods have also been found to be unsatisfactory This book traces the history of the goodwill accounting controversy in detail and demonstrates that it has been a prime example of an issue conceived in a way that it is in principle unsolvable It explores the problem of recognising the importance of goodwill as a whole and finding a way of presenting meaningful information regarding it in the context of the financial statements The author s proposed solution builds upon research undertaken and uses a Market Capitalization Statement based on a modification of nineteenth century double accounting in a modern context Examples show that the proposed Market Capitalization Statement has the potential to provide significant information not currently available from conventional financial statements which in turn are freed to present clearer information *Two Hundred Years of Accounting Research* Richard Mattessich,2007-11-15 This is the first and only book to offer a comprehensive survey of accounting research on a broad international scale for the last two centuries Its main emphasis is
