Low Back Pain Pathogenesis and Treatment Yoshihito Sakai, 2012-03-14 Low back pain is a common disorder which affects the lumbar spine and is associated with substantial morbidity for about 80% of the general population at some stages during their lives. Although low back pain usually is a self-limiting disorder that improves spontaneously over time, the etiology of low back pain is generally unknown and the diagnostic label non-specific low back pain is frequently given. This book contains reviews and original articles with emphasis on pathogenesis and treatment of low back pain except for the rehabilitative aspect. Consisting of three sections, the first section of the book has a focus on pathogenesis of low back pain while the second and third sections are on the treatment including conservative and surgical procedure respectively.
