Narlikar, 2013-04-18 This volume contains papers presented at an international conference to celebrate Fred Hoyle's monumental contributions to astronomy, astrophysics and astrobiology and more generally to humanity and culture. The contributed articles highlight the important aspects of his scientific life and show how much of an example and inspiration he has been for over three generations in the 20th century.

The Great Melbourne Telescope Richard Gillespie, 2011-11-01 Erected at Melbourne Observatory in 1869, the telescope was the second largest in the world designed to explore the nature of the nebulae in the southern skies. Richard Gillespie, head of the History and Technology department at the Melbourne Museum, has written an entertaining account of the telescope's extraordinary history and tells the story through an amazing cast of characters whose lives intersected with the telescope.

Encyclopedia of Astronomy & Astrophysics P. Murdin, 2001-01-01 In a unique collaboration, Nature Publishing Group and Institute of Physics Publishing have published the most extensive and comprehensive reference work in astronomy and astrophysics. This unique resource covers the entire field of astronomy and astrophysics, and this online version includes the full text of over 2,750 articles plus sophisticated search and retrieval functionality and links to the primary literature. The Encyclopaedia's authority is assured by editorial and advisory boards drawn from the world's foremost astronomers and astrophysicists. This first-class resource is an essential source of information for undergraduates, graduate students, researchers and seasoned professionals as well as for committed amateurs, librarians and lay people wishing to consult the definitive astronomy and astrophysics reference work.

A History of Astronomy David Leverington, 2012-12-06 The history of astronomy is like most history, a multidimensional story, and when writing about a specific period, the author has to decide how to handle all the developments of earlier times in order to set the scene. I have done this by starting most chapters of the book with a summary of astronomical knowledge at the beginning of our chosen period, together with a brief review of how such knowledge had been gained. This story is not only interesting in itself, but it will also assist those readers that would appreciate a brief reminder of some of the basic elements of astronomy. It is also necessary to decide when to start our history. Should it be the year 1900 or 1890, or should it be linked to some key development or investigation, e.g. the discovery of the electron by J.J. Thomson in 1897, or the discovery of spectroscopic binary stars by Pickering and Vogel independently in 1889, or maybe the year 1890 in which Thomas Edison tried unsuccessfully to detect radio waves from the Sun, and Johannes Rydberg published his formula for atomic spectra? I have in fact decided to start this history at about 1890, as it was the year of publication of the Draper Memorial Catalogue of stellar spectra, which together with its updates provided essential data for the understanding of stellar spectra until well into the twentieth century. This date also gives a clear hundred years up to the present.

Astronomical Spectrographs and Their History John Hearnshaw, 2009-02-12 Astronomical spectrographs analyse light emitted by the Sun, stars, galaxies and other objects in the Universe and have been used in astronomy since the early nineteenth century. This book provides a

comprehensive account of spectrographs from an historical perspective from their theory and development over the last two hundred years to the recent advances of the early twenty first century The author combines the theoretical principles behind astronomical spectrograph design with their historical development Spectrographs of all types are considered with prism grating or grism dispersing elements Included are Cassegrain coud prime focus chelle fibre fed ultraviolet nebular objective prism multi object instruments and those which are ground based on rockets and balloons or in space The book contains several tables listing the most significant instruments around 900 references and over 150 images making it an indispensable reference for professional astronomers graduate students advanced amateur astronomers and historians of science **The**

Origin and Evolution of the Universe Ben Zuckerman,Matthew Arnold Malkan,1996 The study of the origin and evolution of the universe encompasses many of the most fascinating questions in science What is our place in the universe How did everything in it get started from galaxies and stars to planets and people And what does the future hold for our star and our universe Recently scientists have made remarkable advances in providing concrete answers to these profound questions The new technologies of observational astronomy with its ground and space based gamma ray X ray ultraviolet infrared and radio telescopes is truly producing a new golden age of discovery This book presents the excitement of these new discoveries in the larger context of cosmic evolution The distinguished contributors are leading researchers at the cutting edge of these fields and they also excel in explaining these subjects to the broader public They offer the latest insights into these rapidly advancing fields covering the origin and evolution of the universe the chemical elements galaxies the evolution of stars planets and biological life Essential physical concepts are clearly and carefully explained at the introductory college level Related concepts from chemistry geology and biology are organized and integrated into the discussions An extensive glossary is provided and mathematical detail has been deliberately kept simple to make the chapters accessible to anyone with an appreciation of science The result is stimulating exploration of the frontiers of modern science that will intrigue both amateurs and professionals **AGN Feedback in Galaxy Formation** Vincenzo Antonuccio-Delogu,Joseph Silk,2010-10-28

During the past decade convincing evidence has been accumulated concerning the effect of active galactic nuclei AGN activity on the internal and external environment of their host galaxies Featuring contributions from well respected researchers in the field and bringing together work by specialists in both galaxy formation and AGN this volume addresses a number of key questions about AGN feedback in the context of galaxy formation The topics covered include downsizing and star formation time scales in massive elliptical galaxies the connection between the epochs of supermassive black hole growth and galaxy formation and the question of whether AGN and star formation coexist Authors also discuss key challenging computational problems including jet interstellar intergalactic medium interactions and both jet and merging induced star formation Suitable for researchers and graduate students in astrophysics this volume reflects the engaging and lively discussions taking place in this emerging field of research **Magnificent Universe** Ken Croswell,1999-10-12

Twenty years after Isaac Asimov praised Timothy Ferris's *GALAXIES* as the most beautiful book ever published *MAGNIFICENT UNIVERSE* establishes a new standard of excellence in depicting space No other book even comes close Ken Croswell takes us across the known universe from the planets of the Sun to the stars of the Galaxy to the galaxies of the Cosmos This is simply the most beautiful astronomy book in existence The exploration of space by telescope and space probe continues at an exhilarating pace While many think that only the Hubble telescope has new photographs of the heavens to offer *MAGNIFICENT UNIVERSE* draws not only on Hubble but on fifty different sources With the latest stunning astronomical vistas this lavish book allows us to experience the universe as never before **Journal for the History of**

Symposium, 2008-07-10 In the 12 years since the first discovery of an exoplanet around a main sequence star 51 Peg more than 270 exoplanets have been detected The proceedings of IAU Symposium 249 present the latest theoretical and observational advances in the field of exoplanet research including the ongoing and future projects such as CoRoT and Kepler The volume opens with a review of exoplanet detection and orbital determination techniques before looking at the physics of gas giant atmospheres and close in stars The topics of planet formation migration and the dynamical evolution of protoplanetary disks and multi planet systems are also covered in detail IAU S249 is a useful reference for the graduate students and researchers working in the exciting field of exoplanet study **A Piece of the Action** Barry Giles, 2024-11-08

What is it like to spend a lifetime doing research in a wide variety of fields in the physical sciences Studying distant planets binary stars neutron stars stellar mass black holes and active galaxies using optical and near infrared ground based telescopes Designing and constructing equipment as a member of international teams studying the high energy X ray emissions from many of these objects Flying these detectors on short duration sounding rocket flights utilising huge balloons to carry experiments to high altitude or installing them on long duration satellite missions Being a scientist engaged in fieldwork studying the physical properties of the world's oceans or the sea ice and glaciers around the coastline of Antarctica This lifetime involved living in the UK and Australia for many years with a four year interlude in the USA as well as working in or visiting many other countries How lucky can you get This book describes numerous projects in an unusually diverse range of research areas the fun and adventure of STEM activities without getting into excessive technical or specialist detail
