Evolution and the Human-Animal Drive to Conflict Jorge A. Colombo, 2023-07-31 *Evolution and the Human Animal Drive to Conflict* examines how fundamental universal animal drives such as dominance prevalence survival kinship and profit greed advantage whether of material or social nature provide the basis for the evolutionary trap that promotes the unstable conflictive dominant prone individual and group human behaviours Examining this behavioural tension this book argues that while these innate features set up behaviours that lean towards aggression influenced by social inequalities the means implemented to defuse them resort to emotional and intellectual strategies that sponsor fanaticism and often reproduce the very same behaviours they intend to defuse In addressing these concerns the book argues that we should enhance our resources to promote solidarity accept cultural differences deter expansionist and uncontrolled profit drives and achieve collective access towards knowledge and progress in living conditions This entails promoting the redistribution of resources and creative labour access and avoiding policies that generate a fragmented world with collective and individual

development disparities that invite and encourage dominance behaviours This resource redistribution asserts that it is necessary to reformulate the global set of human priorities towards increased access to better living conditions cognitive enhancement a more amiable interaction with the ecosystem and non aggressive cultural differences promote universal access to knowledge and enhance creativity and cultural convivence These behavioural changes entail partial derangement of our ancestral animal drives camouflaged under different cultural profiles until the species succeeds in replacing the dominance of basic animal drives with prosocial collective ones Though it entails a formidable task of confronting financial military and religious powers and cultural inertias human history is also a challenging continuous experience in these domains for the sake of our own self identity and self evaluation we should reject any suggestion of not continuing embracing slowly constructing collective utopias channelled towards improving individual and collective freedom and creativeness This book will interest academics and students in social cognitive and evolutionary psychology the neurosciences palaeoanthropology philosophy and anthropology Catalog of Audiovisual Productions: Air Force and miscellaneous DoD productions United States. Madness Cracked Michael J. Power, 2015 The recent publication of a new edition of the American Diagnostic and Statistical manual DSM 5 highlighted the two contrary viewpoints that exist within the field of mental health There are those who value such classification systems seeing each revision of the DSM as a fine tuning exercise and there are those who are strongly opposed seeing such exercises as fundamentally flawed Madness Cracked provides a fascinating introduction to the history of psychiatry and clinical psychology looking at how these areas have attempted to classify the various problems and disorders that their practitioners have faced in everyday use Within the book Power argues that like in

other areas of science progress can only be made if the classification systems that are used have a sound theoretical basis In addition he outlines a model derived from work on cognition and emotion showing how with appropriate modifications it could provide a theoretical basis for classification and diagnosis Using extraordinary examples from the history of psychiatry and clinical psychology along with fascinating case material he shows how our current knowledge in psychology can be developed to provide the theoretical basis that the field needs For anyone in the field of mental health *Madness Cracked* is a thought provoking and controversial new book
