Driving Emissions To Zero:

Racing Toward Zero Kelly Senecal, Felix Leach, 2021-06-01 In *Racing Toward Zero* the authors explore the issues inherent in developing sustainable transportation. They review the types of propulsion systems and vehicle options, discuss low carbon fuels and alternative energy sources, and examine the role of regulation in curbing emissions. All technologies have an impact on the environment, from internal combustion engine vehicles to battery electric vehicles, fuel cell electric vehicles, and hybrids. There is no silver bullet. The battery electric vehicle may seem the obvious path to a sustainable carbon free transportation future, but it is not the only nor necessarily the best path forward. The vast majority of vehicles today use the internal combustion engine (ICE) and this is unlikely to change anytime soon. Improving the ICE and its fuels, entering a new ICE age, must be a main route on the road to zero emissions. How do we go green? The future requires a balanced approach to transportation. It is not a matter of choosing between combustion or electrification; it is combustion and electrification. As the authors say, "The future is eclectic. By harnessing the best qualities of both technologies, we will be in the best position to address our transportation future as quickly as possible." ISBN 9781468601466 ISBN 9781468601473 ISBN 9781468602005 DOI 10.4271/9781468601473 [The Global Rise of the Modern Plug-In Electric Vehicle](#) John D. Graham, 2021-04-30 We may be standing on the precipice of a revolution in propulsion not seen since the internal combustion engine replaced the horse and buggy. The anticipated proliferation of electric cars will influence the daily lives of motorists, the economies of different countries and regions, urban air quality, and global climate change. If you want to understand how quickly the transition is likely to occur and the factors that will influence the predictions of the pace of the transition, this book will be an illuminating read. **US Economic Policy in the 21st Century** Alexandros Mourmouras, Peter Rangazas, 2023-08-02 This book addresses major economic problems affecting the United States and proposes policy reforms to target them. The authors use a broad survey of economic research to conduct an evidence based assessment of four economic issues affecting the US and other developed nations: slowing economic growth, unsustainable public debt, increases in widening wage inequality, and climate change. Finding that the problems are interconnected and should be dealt with in a comprehensive manner, the authors explain how current policies have contributed to the issues and make recommendations on policy reforms. All four issues are examined in one place and the resulting policy recommendations form a consistent plan to mediate the problems simultaneously. Providing a comprehensive approach to some of economic policy's most difficult problems, this book will be an excellent resource for students and researchers interested in macroeconomic theory, public sector economics, international economics, labor economics, and environmental economics. **Decarbonization Strategies and Drivers to Achieve Carbon Neutrality for Sustainability** Majeti Narasimha Vara Prasad, Larry Erickson, Fabio Carvalho Nunes, Bimastyaji Surya Ramadan, 2024-03-07 *Decarbonization Strategies and Drivers to Achieve Carbon Neutrality for Sustainability* emphasizes the significance of various decarbonization strategies. It is expected to solve some of the

problems centered around decarbonization and available technologies and to diversify renewable energy supply in different sectors contributing to energy security The book covers contribution of bioenergy to decarbonization non fossil energy targets role of wind energy hydrogen energy potential of geothermal energy nuclear energy wind to energy role of electrification and carbon capture utilization and storage CCUS technologies are covered in this work Decarbonization Strategies and Drivers to Achieve Carbon Neutrality for Sustainability aims to explain how reducing petroleum consumption and supplementing alternate sources of renewable fuels is vital and would strengthen decarbonization Provides strategies for the implementation of decarbonization Explores the possibilities for reducing the emission of greenhouse gases Suggests actions and possible solutions to counteract climate change and its consequences **Green Energy** Dustin

Why Are We Waiting? Nicholas Stern,2016-07-29 An urgent case for climate change action that forcefully sets out in economic ethical and political terms the dangers of delay and the benefits of action The risks of climate change are potentially immense The benefits of taking action are also clear we can see that economic development reduced emissions and creative adaptation go hand in hand A committed and strong low carbon transition could trigger a new wave of economic and technological transformation and investment a new era of global and sustainable prosperity Why then are we waiting In this book Nicholas Stern explains why notwithstanding the great attractions of a new path it has been so difficult to tackle climate change effectively He makes a compelling case for climate action now and sets out the forms that action should take Stern argues that the risks and costs of climate change are worse than estimated in the landmark Stern Review in 2006 and far worse than implied by standard economic models He reminds us that we have a choice We can rely on past technologies methods and institutions or we can embrace change innovation

and international collaboration The first might bring us some short term growth but would lead eventually to chaos conflict and destruction The second could bring about better lives for all and growth that is sustainable over the long term and help win the battle against worldwide poverty The science warns of the dangers of neglect the economics and technology show what we can do and the great benefits that will follow an examination of the ethics points strongly to a moral imperative for action Why are we waiting

Hydrogen and e-Mobility J. Jay Liu, Mohammad Reza Salehizadeh, Mustafa İnci, 2025-10-01 Hydrogen and e-Mobility Technologies Integration and Optimal Management demystifies hydrogen fueled transport from foundational principles to real world implementation and problem solving The book presents conceptual methodologies and techno economic solutions for the applications of hydrogen in e-mobility including system aspects of hydrogen based mobility This holistic approach covers essential technologies from the fundamental economic and technical assessment of hydrogen capable vehicles to charging infrastructure energy storage solutions and urban public transport Presenting a coherent program from global experts this book supports readers taking their first steps in hydrogen vehicles and offers new insights to researchers and engineers looking for more advanced applications Provides a well rounded overview of the essential principles challenges and advances at the cutting edge of hydrogen powered mobility Includes learning objectives and practice questions for each chapter to support understanding and application Builds practical skills including MATLAB code on a companion website allowing for the design of reliable resilient hydrogen based transport systems

Driving Emissions to Zero Lloyd S. Dixon, Isaac Porche, Jonathan Kulick, 2002 California's Zero Emission Vehicle ZEV program requires that starting in 2003 a portion of the new vehicles delivered for sale in the state must produce no emissions This study examines the costs and emission benefits of battery powered electric vehicles direct hydrogen fuel cell vehicles and other advanced technology vehicles such as gasoline hybrid electric vehicles that manufacturers may use to satisfy program requirements The authors find that the cost of battery powered electric vehicles per ton of emissions reduced is very high and not likely to fall to reasonable levels any time soon and that it is too early to tell whether direct hydrogen fuel cell vehicles which show much promise are an economical way to

improve California's air quality The study also evaluates California's goal of reducing the emissions of the state's light duty vehicle fleet to zero It finds that federal air quality standards can be met without a zero emission fleet and that lower cost alternatives for improving air quality appear available The authors conclude that instead of requiring manufacturers to meet emission reduction targets with particular vehicle technologies California should eliminate the requirement for zero emission vehicles tighten emission standards on light duty vehicles and focus on setting emission performance standards

Carbon dioxide removal: Perspectives from the social sciences and humanities Anders Hansson, Mathias Fridahl, Miranda Boettcher, Shinichiro Asayama, 2024-07-09 Carbon dioxide removal CDR approaches are becoming increasingly central to visions of decarbonizing national economies The past few years have seen an increasing number of countries committed to net zero targets preceded by a surge of modelled 1.5 C scenarios envisioning large scale future CDR deployment The prospect of CDR deployment raises new complex socio ecological challenges and presents new deep uncertainties These complexities challenges and uncertainties cannot be investigated using solely the techno economic modelling and environmental risk assessment methods that currently dominate the construction of policy relevant knowledge on CDR Social sciences and the humanities perspectives on CDR are often restricted to instrumental tasks such as investigating public acceptance overcoming social resistance or supporting the development of integrated assessment models There is a need for more diverse investigations of CDR which include not only environmental and techno economic dimensions but also explore key societal complexities challenges and uncertainties Against this backdrop we call for submissions on CDR stemming from perspectives within the social sciences and humanities We encourage novel empirical and theoretical contributions on CDR related policy design or analyses of recent policy developments at sub national national and international levels of governance e.g. in context of climate targets and strategies climate tipping points mitigation deterrence or societal transformations

Climate Policies and External Adjustment Mr. Rudolfs Bems, Luciana Juvenal, Weifeng Liu, Warwick J. McKibbin, 2024-07-26 This paper assesses the economic effects of climate policies on different regions and countries with a focus on external adjustment The paper finds that various climate policies could have substantially different impacts on external balances over the next decade A credible and globally coordinated carbon tax would decrease current account balances in greener advanced economies and increase current accounts in more fossil fuel dependent regions reflecting a disproportionate decline in investment for the latter group Green supply side policies green subsidy and infrastructure

investment would increase investment and saving but would have a more muted external sector impact because of the constrained pace of expansion for renewables or the symmetry of the infrastructure boost Country characteristics such as initial carbon intensity and net fossil fuel exports ultimately determine the current account responses For the global economy a coordinated climate change mitigation policy package would shift capital towards advanced economies Following an initial rise the global interest rates would fall over time with increases in the carbon tax These external sector effects however depend crucially on the degree of international policy coordination and credibility

Elgar Encyclopedia of Climate Policy Daniel J. Fiorino, Todd A. Eisenstadt, Manjyot K. Ahluwalia, 2024-04-12 The Elgar Encyclopedia of Climate Policy provides a comprehensive and compelling account of the causes and potential solutions to one of the most pressing global challenges of the 21st century climate change With deep intellectual rigour this Encyclopedia adeptly surveys the nature and application of various international climate change policies

Two Billion Cars Daniel Sperling, Deborah Gordon, 2009-01-13 Today there are over a billion vehicles in the world and within twenty years the number will double largely a consequence of China's and India's explosive growth Given that greenhouse gases are already creating havoc with our climate and that violent conflict in unstable oil rich nations is on the rise will matters only get worse Or are there hopeful signs that effective realistic solutions can be found Blending a concise history of cars and their impact on the world leading transportation experts Daniel Sperling and Deborah Gordon explain how we arrived at this state and what we can do about it Sperling and Gordon assign blame squarely where it belongs on the auto industry short sighted government policies and consumers They explore such solutions as getting beyond the gas guzzler monoculture re-inventing cars searching for low carbon fuels and more Promising advances in both transportation technology and fuel efficiency together with shifts in traveler behavior they suggest offer us a way out of our predicament The authors conclude that the two places that have the most troublesome emissions problems California and China are the most likely to become world leaders on these issues Arnold Schwarzenegger's enlightened embrace of eco friendly fuel policies which he discusses in the foreword and China's forthright recognition that it needs far reaching environmental and energy policies suggest that if they can tackle the issue effectively and honestly then there really is reason for hope Updated with a new afterword that sheds light on the profound changes in the global economy in the last year Two Billion Cars makes the case for why and how we need to transform transportation now more than ever Authoritatively prescriptive Tom Vanderbilt Wilson Quarterly Provocative and pleasurable far seeing and refreshing fact based and yet a page turner global in scope but rooted in real places The authors make a convincing case that smart consumers driving smart electric drive cars can find the critical path to a safer planet Robert Socolow Princeton University In this insightful and persuasive book Sperling and Gordon highlight one of the biggest environmental challenges of this century two billion cars They rightly contend that we cannot avert the worst of global warming without making our cars cleaner and petroleum free Luckily the authors also offer a roadmap for navigating this
