Bock, Jamie A. Goode, 2006-06-14 Cigarette smoking is estimated to lead to 4 9 million premature deaths per year worldwide This is predicted to rise to 10 million by 2020 In western countries it kills half of all smokers who fail to stop The prevailing model for tobacco addiction is that nicotine from cigarettes rewards smoking and punishes abstinence tapping into a motivational system of operant conditioning that requires no conscious awareness However there are also accounts which involve cognitive biases and the effect of nicotine on impulse control The brain pathways involved have been studied extensively but

the role of different nicotine receptor subtypes and other neurotransmitter systems is still subject to debate. In western countries cigarette smoking as an adult has a heritability of 30-50% and candidate genes have been identified that may contribute in part to addiction susceptibility. Many socio-cultural correlates of cigarette smoking have been established but a comprehensive model that accounts for these and links them with the psychobiological aspects of nicotine addiction has not been forthcoming. Structured behavioural support programmes aid cessation attempts as do a number of pharmacotherapies most notably nicotine replacement treatments and bupropion but the underlying mechanisms are unclear. This book deals with the problems involved in understanding and treating nicotine and tobacco addiction. Topics covered include the nature of the worldwide health problem posed by cigarette smoking, the psychodynamics of cigarette addiction and the basic pharmacology and biochemistry of nicotine and its effect on the brain. Further chapters analyse the genetic basis of susceptibility to nicotine addiction. Finally the contributors address approaches to therapy. A continuing theme in the discussions throughout the book is how best to treat nicotine addiction given that many smokers would like to stop smoking but are unable to do so because of their addiction. This book will be of great value to all psychologists and psychiatrists working on addiction specifically to nicotine but also to other compounds and behaviours. It will also be of interest to neuroscientists and pharmacologists working on nicotine receptors and the brain pathways involved in dependence as well as to biochemists, molecular biologists and to public health officials.

Drugs of Abuse John Q. Wang, 2008-02-01

Drugs of Abuse: Neurological Reviews and Protocols is intended to provide insightful reviews of key current topics and particularly state the art methods for examining drug actions in their various neuroanatomical, neurochemical, neurophysiological, neuropharmacological and molecular perspectives. The book should prove particularly useful to newcomers, graduate students and technicians in this field as well as to those established scientists, neuroscientists, biochemists and molecular biologists intending to pursue new careers or directions in the study of drugs. The book's protocols cover a wide variety of coherent methods for gathering information on quantitative changes in proteins and mRNAs at both tissue and cellular levels. Inducible gene expression in striatal neurons has been a hot topic over the last decade. Alterations in gene expression for a wide range of proteins in the striatum have been investigated in response to drug administration. Altered expression of given mRNAs and their product proteins constitutes essential molecular steps in the development of neuroplasticity related to long-term addictive properties of drugs of abuse. With the multiple labeling methods that are also described in the book, gene expression can be detected in a chemically identified cell phenotype; the expression of multiple genes of interest can be detected in a single cell simultaneously. Hundreds or thousands of gene expression products can today be detected in one experimental setup using the powerful systematic cDNA macroarray or microarray screening technology. Moreover, protocols useful in analyzing the functional roles of genes and proteins are given.
