Musarella, Ana Cano Ortiz, Ricardo Quinto Canas, 2020-01-29 Today it is not easy to talk about habitats and to think about the various threats facing them We are living in an age in which we are poised between having everything immediately and maintaining good living conditions on Earth Unfortunately this is almost impossible For this reason it is important that everyone understands the importance of the habitats of the world and the inhabitants including humans This book aims to describe some of the world's habitats their characteristics and their daily threats This is done in the hope that our children will see all of this tomorrow Enjoy reading **Climate Change Impacts in India** Chaitanya B. Pande, Kanak N. Moharir, Abdelazim Negm, 2023-10-24

This book focuses on the impact of climate change on India addressing environmental problems and conducting an analysis of the climate change impact on mitigation processes It examines crucial factors such as soil capability soil erosion soil salinity and watershed planning as well as the influence of climate change on water resources including groundwater The book explores the interconnections between climate change soil erosion natural resources and agricultural practices emphasizing their direct or indirect effects on water vegetation irrigation planning and the environment Furthermore it delves into various aspects of soil erosion soil compaction soil nutrients aquifers and the impact of climate change on vegetation crops pests moisture and sustainable yield These factors contribute to the development of climate change related factors within the agricultural sector ultimately fostering sustainable development and management practices for the future The book also highlights the significance of parameters such as land use change analysis rainfall water resources crop yield sustainable agricultural development pest management and disease control in accurately assessing the impact of climate change The insights gained from these analyses can inform future development and planning strategies Therefore this book serves as a valuable resource for researchers scientists NGOs and academics interested in understanding the impact of climate change on natural resources and ecological systems *Insuring against*

*droughts: Evidence on agricultural intensification and index insurance demand from a randomized evaluation in rural Bangladesh* Hill, Ruth Vargas, Kumar, Neha, Magnan, Nicholas, Makhija, Simrin, de Nicola, Francesca, Spielman, David J., Ward, Patrick S., 2017-04-07 It is widely acknowledged that unmitigated risks provide a disincentive for otherwise optimal investments in modern farm inputs Index insurance provides a means for managing risk without the burdens of asymmetric information and high transaction costs that plague traditional indemnity based crop insurance programs Yet many index insurance programs that have been piloted around the world have met with rather limited success so the potential for insurance to foster more intensive agricultural production has yet to be realized This study assesses both the demand for and the effectiveness of an innovative index insurance product designed to help smallholder farmers in Bangladesh manage risk to crop yields and the increased production costs associated with drought Villages were randomized into either an insurance treatment or a comparison group and discounts and rebates were randomly allocated across treatment villages to encourage insurance take up and to allow for the estimation of the price elasticity of insurance demand Among those offered insurance

we find insurance demand to be moderately price elastic with discounts significantly more successful in stimulating demand than rebates Farmers who are highly risk averse or sensitive to basis risk prefer a rebate to a discount suggesting that the rebate may partially offset some of the implicit costs associated with insurance contract nonperformance Having insurance yields both ex ante risk management effects and ex post income effects on agricultural input use The risk management effects lead to increased expenditures on inputs during the aman rice growing season including expenditures for risky inputs such as fertilizers as well as those for irrigation and pesticides The income effects lead to increased seed expenditures during the boro rice growing season which may signal insured farmers higher rates of seed replacement which broadens their access to technological improvements embodied in newer seeds as well as enhancing the genetic purity of cultivated seeds

*Crop Production Technologies* Peeyush Sharma,Vikas Abrol,2012-01-05 Crop production depends on the successful implementation of the soil water and nutrient management technologies Food production by the year 2020 needs to be increased by 50 percent more than the present levels to satisfy the needs of around 8 billion people Much of the increase would have to come from intensification of agricultural production Importance of wise usage of water nutrient management and tillage in the agricultural sector for sustaining agricultural growth and slowing down environmental degradation calls for urgent attention of researchers planners and policy makers Crop models enable researchers to promptly speculate on the long term consequences of changes in agricultural practices In addition cropping systems under different conditions are making it possible to identify the adaptations required to respond to changes This book adopts an interdisciplinary approach and contributes to this new vision Leading authors analyze topics related to crop production technologies The efforts have been made to keep the language as simple as possible keeping in mind the readers of different language origins The emphasis has been on general descriptions and principles of each topic technical details original research work and modeling aspects However the comprehensive journal references in each area should enable the reader to pursue further studies of special interest The subject has been presented through fifteen chapters to clearly specify different topics for convenience of the readers **Monitoring and Predicting Agricultural Drought** Vijendra K. Boken,Arthur P. Cracknell,Ronald L.

Heathcote,2005-04-14 Agricultural droughts affect whole societies leading to higher food costs threatened economies and even famine In order to mitigate such effects researchers must first be able to monitor them and then predict them however no book currently focuses on accurate monitoring or prediction of these devastating kinds of droughts To fill this void the editors of *Monitoring and Predicting Agricultural Drought* have assembled a team of expert contributors from all continents to make a global study describing biometeorological models and monitoring methods for agricultural droughts These models and methods note the relationships between precipitation soil moisture and crop yields using data gathered from conventional and remote sensing techniques The coverage of the book includes probabilistic models and techniques used in America Europe and the former USSR Africa Asia and Australia and it concludes with coverage of climate change and

resultant shifts in agricultural productivity drought early warning systems and famine mitigation This will be an essential collection for those who must advise governments or international organizations on the current scope likelihood and impact of agricultural droughts Sponsored by the World Meteorological Organization

**Modelling Interception and Transpiration at Monthly Time Steps** Maria Margaretha de Groen,2002-06-01 The book presents improved equations for monthly water resources models in particular for interception and transpiration Most of the existing monthly models do not make a distinction between interception and transpiration while this distinction is very important for management purposes Interception is direct feedback to the atmosphere important to sustain rainfall Transpiration is a good indicator for plant growth and biomass production This distinction also contributes to the estimation of recharge and therewith of runoff The derivations are based on the Markov theory for the occurrence of rain days The methodology can be used on the basis of an analysis of a few time series of daily data at a spatial scale of 300km and not necessarily of the same period as the monthly data Zimbabwe served as the case study but derived equations can be used worldwide as long as the relationship between the monthly rainfall and the mean number of rain days can be established
