Crab Nebula:

The Crab Nebula Simon Mitton, 1979 The Crab Nebula R.D. Davies, F.G. Smith, 2012-12-06 The Symposium on the Crab Nebula was held in the University of Manchester from 5 to 7 August 1970 The meetings on the first day were held in the Physics Department on the University campus and on the second and third days at the Nuffield Radio Astronomy Laboratories Jodrell Bank The 4th Symposium of the International Astronomical Union convened in the University and at Jodrell Bank fifteen years earlier 25-27 August 1955 dealt with the entire subject of radio and radar astronomy Now the subject matter of this 46th Symposium of the International Astronomical Union was confined to one single object It is interesting to recall that even at the 1955 symposium the Crab Nebula figured prominently In particular J H Oort described the new measurements of the polarization of the light from the nebula and I S Shklovsky explained the light and radio emission in terms of the motion of relativistic electrons in the magnetic field of the nebula No one could have foreseen the exciting discoveries of a decade later which stimulated the assembly of 172 participants to this 1970 Symposium In addition to the lectures and discussions the visitors were able to tour the laboratories and telescopes at Jodrell Bank to see the various researches in progress The demonstrations included a real time display on a cathode ray tube of the pulses from pulsar CP 0328 received in the 250 ft steerable telescope **Supernovae** Paul Murdin, Lesley Murdin, 1985-11-07 This revised 1985 edition tells the story of supernovae capturing the flavour of ancient astronomy **The Physical Universe** Frank Shu, 1982 THE PHYSICAL UNIVERSE An Introduction to Astronomy by Frank Shu is a classic text that despite its age still offers up concise and exact explanations of concepts in physics from basic thermodynamics and quantum up to solar and galactic physics and on to cosmology The philosophical ruminations on life not only add to this book's depth but also to its basic sense of humanity Nuclear Science Abstracts, 1976 Exploring the X-Ray Universe Philip A. Charles, Frederick D. Seward, 1995-10-12 The one stop general book on the whole of X ray astronomy **The Supernova Story** Laurence A. Marschall, 1994-07-03 Astronomers believe that a supernova is a massive explosion signaling the death of a star causing a cosmic recycling of the chemical elements and leaving behind a pulsar black hole or nothing at all In an engaging story of the life cycles of stars Laurence Marschall tells how early astronomers identified supernovae and how later scientists came to their current understanding piecing together observations and historical accounts to form a theory which was tested by intensive study of SN 1987A the brightest supernova since 1006 He has revised and updated The Supernova Story to include all the latest developments concerning SN 1987A which astronomers still watch for possible aftershocks as well as SN 1993J the spectacular new event in the cosmic laboratory Planets, Stars and Nebulae Tom Gehrels, 1974-03 The polarization study of celestial objects is a valuable part of optical astronomy and the author has done exceptionally well in bringing together contributions treating all aspects of the polarimetry field The first section contains a fine introduction and an excellent and definitive history of the subject The volume is well illustrated Highly recommended Choice The high quality of this book

is clearly due to strict editorial attention to each paper and the discussions Gehrels book will surely stand for many years as the fundamental reference source for polarization studies in astronomy as well as in atmospheric physics

Revealing the Most Energetic Light from Pulsars and Their Nebulae David Carreto Fidalgo, 2019-07-17

This book reports on the extraordinary observation of TeV gamma rays from the Crab Pulsar the most energetic light ever detected from this type of object It presents detailed information on the painstaking analysis of the unprecedentedly large dataset from the MAGIC telescopes and comprehensively discusses the implications of pulsed TeV gamma rays for state of the art pulsar emission models Using these results the book subsequently explores new testing methodologies for Lorentz Invariance Violation in terms of a wavelength dependent speed of light The book also covers an updated search for Very High Energy VHE 100 GeV emissions from millisecond pulsars using the Large Area Telescope on board the Fermi satellite as well as a study on the promising Pulsar Wind Nebula candidate PSR J0631 The observation of VHE gamma rays is essential to studying the non thermal sources of radiation in our Universe Rotating neutron stars also known as pulsars are an extreme source class known to emit VHE gamma rays However to date only two pulsars have been detected with emissions above 100 GeV and our understanding of their emission mechanism is still lacking

High Energy Astrophysics James Matthews, 1994 This book is a collection of comprehensive reviews on astrophysics at the highest energies It puts together for the first time discussions of astrophysics from MeV to EeV energies and beyond Observations at these energies reveal nuclear and particle physics throughout our galaxy as well as in the most extreme environments in the entire cosmos These reports range from the recent spectacular results from the Compton Gamma Ray Observatory including the latest information on enigmatic gamma ray bursts to cosmic rays at the highest energies ever observed by man

Radio Astronomy H. C. Van De Hulst, 2016-06-02 Originally published in 1957 this book presents symposium number 4 organised by the International Astronomical Union held on 25th 27th August 1955 at the Jodrell Bank Experimental Station of the University of Manchester This volume contains all but two of the papers presented and one contribution paper 16 has been added at the editor's request Furthermore many papers have been improved as a result of discussion at the symposium or by the inclusion of data not available in August 1955 The papers are broad in scope and detailed chapter titles include Spectral line investigations Galactic structure and statistical studies of point sources and Meteors and planets Diagrams are included for reference throughout This book will be of significant value to astronomy scholars as well as to anyone with an interest in physics cosmology and the history of science

Edwin Hubble, The Discoverer of the Big Bang Universe Alexander S. Sharov, Igor' Dmitrievich Novikov, 1993-10-14 This book is the first complete account of the scientific life and work of Edwin Hubble whose discoveries firmly established the United States as the leading nation in observational astronomy One of the outstanding astronomers of the twentieth century Hubble discovered the expansion of the Universe He opened the world of galaxies for science when he showed that spiral

nebulae beyond the Milky Way are galaxies extending to the limits of the Universe and participating in a general expansion of the cosmos The exploding Universe of Hubble now termed the Big Bang determined the origin of the elements of galaxies and of the stars The second part of the book describes the fundamental discoveries on the nature of the Universe made subsequently and thus sets his achievements in context Written by two prominent astronomers who have built on Hubble's work this book is a classic of science setting out the thrilling story of the exploding Universe **Clocks in the Sky** Geoff McNamara, 2009-04-24 Pulsars are rapidly spinning neutron stars the collapsed cores of once massive stars that ended their lives as supernova explosions In this book Geoff McNamara explores the history subsequent discovery and contemporary research into pulsar astronomy The story of pulsars is brought right up to date with the announcement in 2006 of a new breed of pulsar Rotating Radio Transients RRATs which emit short bursts of radio signals separated by long pauses These may outnumber conventional radio pulsars by a ratio of four to one Geoff McNamara ends by pointing out that despite the enormous success of pulsar research in the second half of the twentieth century the real discoveries are yet to be made including perhaps the detection of the hypothetical pulsar black hole binary system by the proposed Square Kilometre Array the largest single radio telescope in the world **Literature 1969, Part 2** Siegfried Böhme, Walter Fricke, Ulrich Güntzel-Lingner, Frieda Henn, Dietlinde Krahn, Gert Zech, 2012-12-06 Astronomy and Astrophysics Abstracts which appears in semi annual volumes is devoted to the recording summarizing and indexing of astronomical publications throughout the world It aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly issued abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 2 contains literature published in 1969 and received before March 15 1970 some older literature which was received late and which is not recorded in Volume 1 is also included The authors of papers who have sent us abstracts on request have effectively contributed to the success of our service We should like to express our gratitude to them We acknowledge with thanks contributions to this volume by Dr J Boua who surveyed journals and publications in Czech language and supplied us with abstracts in English by Dr B Onderlicka Brno for providing English abstracts of Russian papers and by the Commonwealth Scientific and Industrial Research Organization CSIRO Sydney for providing titles and abstracts of papers on radio astronomy **Chandra's Cosmos** Wallace H. Tucker, 2017-03-28 On July 23 1999 the Chandra X Ray Observatory the most powerful X ray telescope ever built was launched aboard the space shuttle Columbia Since then Chandra has given us a view of the universe that is largely hidden from telescopes sensitive only to visible light In Chandra's Cosmos the Smithsonian Astrophysical Observatory's Chandra science spokesperson Wallace H Tucker uses a series of short connected stories to describe the telescope's exploration of the hot high energy face of the universe The book is organized in

three parts The Big covering the cosmic web dark energy dark matter and massive clusters of galaxies The Bad exploring neutron stars stellar black holes and supermassive black holes and The Beautiful discussing stars exoplanets and life Chandra has imaged the spectacular glowing remains of exploded stars and taken spectra showing the dispersal of their elements Chandra has observed the region around the supermassive black hole in the center of our Milky Way and traced the separation of dark matter from normal matter in the collision of galaxies contributing to both dark matter and dark energy studies Tucker explores the implications of these observations in an entertaining informative narrative aimed at space buffs and general readers alike *In Quest of the Universe* Theo Koupelis, Karl F. Kuhn, 2007 New to this Edition A new chapter on the Night Sky urges students to become backyard astronomers and observe the sky on multiple clear nights while taking note of the patterns of the positions of stars and planets New to this *Multiple Messengers and Challenges in Astroparticle Physics* Roberto Aloisio, Eugenio Coccia, Francesco Vissani, 2018-02-27 This book designed as a tool for young researchers and graduate students reviews the main open problems and research lines in various fields of astroparticle physics cosmic rays gamma rays neutrinos cosmology and gravitational physics The opening section discusses cosmic rays of both galactic and extragalactic origin examining experimental results theoretical models and possible future developments The basics of gamma ray astronomy are then described including the detection methods and techniques Galactic and extragalactic aspects of the field are addressed in the light of recent discoveries with space borne and ground based detectors The review of neutrinos outlines the status of the investigations of neutrino radiation and brings together relevant formulae estimations and background information Three complementary issues in cosmology are examined observable predictions of inflation in the early universe effects of dark energy modified gravity in the large scale structure of the universe and neutrinos in cosmology and large scale structures The closing section on gravitational physics reviews issues relating to quantum gravity atomic precision tests space based experiments the strong field regime gravitational waves multi messengers and alternative theories of gravity **Literature 1977, Part 2** Siegfried Böhme, Ute Esser, Walter Fricke, Inge Heinrich, Dietlinde Krahn, Lutz D.
