The Higher Colleges of Technology's HCT General Education Division GED and the HCT Dubai Women's campus are pleased to host the second HCT International General Education Conference on March 15, 2024. The theme of this year's conference is 'The Future of Work: Equipping Students with Applied Learning Skills for Success'. This theme highlights the critical need to prepare students for the evolving landscape of the labor market and employability. The conference explores the intersection of applied learning and the future of work, recognizing that theoretical knowledge alone is no longer sufficient and that students need to apply their learning in real-world contexts. By engaging in applied learning opportunities, students can develop the skills, mindset, and adaptability required to navigate the challenges and opportunities of the future workplace. The conference seeks to address various aspects related to preparing students for success in the future of work, including skills development for the digital era, cultivating an entrepreneurial mindset, bridging the gap between education and industry demands, problem solving and critical thinking, and the development of soft skills such as emotional intelligence and interpersonal competence. Overall, the conference aims to bring together educators, professionals, and researchers to share best practices, innovative approaches, and strategies for equipping students with applied learning skills that will enable their success in the dynamic and ever-changing future of work. Non-Life Insurance

Pricing with Generalized Linear Models Esbjörn Ohlsson, Björn Johansson, 2010-03-18. Non-life insurance pricing is the art of setting the price of an insurance policy, taking into consideration various properties of the insured object and the policyholder. Introduced by British actuaries, generalized linear models (GLMs) have become today a standard approach for tariff analysis. The book focuses on methods based on GLMs that have been found useful in actuarial practice and provides a set of tools for a tariff analysis. Basic theory of GLMs in a tariff analysis setting is presented with useful extensions of standard GLM theory that are not in common use. The book meets the European Core Syllabus for actuarial education and is written for actuarial students as well as practicing actuaries. To support reader real data of some complexity are provided at www.math.su.se/GLMbook. **Quantitative Risk Management** Alexander J. McNeil, Rüdiger Frey, Paul Embrechts, 2015-05-26.

This book provides the most comprehensive treatment of the theoretical concepts and modelling techniques of quantitative risk management. Whether you are a financial risk analyst, actuary, regulator, or student of quantitative finance, *Quantitative Risk Management* gives you the practical tools you need to solve real-world problems. Describing the latest advances in the field, *Quantitative Risk Management* covers the methods for market, credit, and operational risk modelling. It places standard industry approaches on a more formal footing and explores key concepts such as loss distributions, risk measures, and risk

aggregation and allocation principles The book's methodology draws on diverse quantitative disciplines from mathematical finance and statistics to econometrics and actuarial mathematics A primary theme throughout is the need to satisfactorily address extreme outcomes and the dependence of key risk drivers Proven in the classroom the book also covers advanced topics like credit derivatives Fully revised and expanded to reflect developments in the field since the financial crisis Features shorter chapters to facilitate teaching and learning Provides enhanced coverage of Solvency II and insurance risk management and extended treatment of credit risk including counterparty credit risk and CDO pricing Includes a new chapter on market risk and new material on risk measures and risk aggregation

Air Pollution Modeling and Its Application VIII H. Van Dop, Douw G. Steyn, 2012-12-06 In 1949 when the North Atlantic Treaty was ratified one of its articles explicitly noted that member countries should contribute towards the further development of peaceful and friendly international relations Specific problems related to the human environment were addressed by the Committee of Challenges of Modern Society CCMS of NATO established in 1969 This provided a framework within which a series of International Technical Meetings ITMs on Air Pollution Modelling has been held This volume documents the proceedings of the 18th meeting in this series Science like the arts and sports provides an ideal vehicle for developing peaceful and friendly international relations National boundaries have never been barriers to the movement of air pollution and fortunately this has also proved true of scientists studying the transport of air pollution It is thus satisfying to record that since the mid seventies it has been commonplace to find Eastern European scientists among attendees at the ITMs which have in a very modest way participated in a precursor to the process which has led to historical changes in Europe and which will undoubtedly lead to a tremendous increase in personal and intellectual exchange on a worldwide basis
