Brain In Hominid Evolution The:

Evolution of the Brain: Creation of the Self John C. Eccles, 2005-07-05 In this book Nobel Prize winner Sir John Eccles tells the story of how man came to be as he is not only as an animal at the end of the hominid evolutionary line but also as a human being possessed of reflective consciousness

Human Brain Evolution Stephen Cunnane, Kathryn Stewart, 2010-07-30 The evolution of the human brain and cognitive ability is one of the central themes of physical biological anthropology This book discusses the emergence of human cognition at a conceptual level describing it as a process of long adaptive stasis interrupted by short periods of cognitive advance These advances were not linear and directed but were acquired indirectly as part of changing human behaviors in other words through the process of exaptation acquisition of a function for which it was not originally selected Based on studies of the modern human brain certain prerequisites were needed for the development of the early brain and associated cognitive advances This book documents the energy and nutrient constraints of the modern brain highlighting the significant role of long chain polyunsaturated fatty acids LC PUFA in brain development and maintenance Crawford provides further emphasis for the role of essential fatty acids in particular DHA in brain development by discussing the evolution of the eye and neural systems This is an ideal book for Graduate students post docs research scientists in Physical Biological Anthropology Human Biology Archaeology Nutrition Cognitive Science Neurosciences It is also an excellent selection for a grad student discussion seminar

The Human Fossil Record, Brain Endocasts--The Paleoneurological Evidence Jeffrey H. Schwartz, Ian Tattersall, Ralph L. Holloway, 2002 The Human Fossil Record Volume one Terminology and Craniodental Morphology of Genus Homo Europe Jeffrey H Schwartz Ian Tattersall The Human Fossil Record series is the most authoritative and comprehensive documentation of the fossil evidence relevant to the study of our evolutionary past This first volume covers the craniodental remains from Europe that have been attributed to the genus Homo Here the authors also clearly define the terminology and descriptive protocol that is applied uniformly throughout the series Organized alphabetically by site name each entry includes clear descriptions and original expertly taken photographs as well as Morphology Location information History of discovery Previous systematic assessments of the fossils Geological archaeological and faunal contexts Dating References to the primary literature The Human Fossil Record series is truly a must have reference for anyone seriously interested in the study of human evolution

The Brain in Hominid Evolution Phillip V. Tobias, 1971

Survival Of The Fattest: The Key To Human Brain Evolution Stephan Cosgrave Cunnane, 2005-05-06 How did humans evolve larger and more sophisticated brains In general evolution depends on a special combination of circumstances part genetics part time and part environment In the case of human brain evolution the main environmental influence was adaptation to a shore based diet which provided the world s richest source of nutrition as well as a sedentary lifestyle that promoted fat deposition Such a diet included shellfish fish marsh plants frogs bird s eggs etc Humans and and more importantly hominid babies started to get fat a crucial distinction

that led to the development of larger brains and to the evolution of modern humans A larger brain is expensive to maintain and this increasing demand for energy results in succinctly survival of the fittest

The Lives of the Brain John S. Allen, 2010-02-15 Though we have other distinguishing characteristics bipedalism relative hairlessness etc the brain and the behavior it produces are what truly set us apart from the other apes and primates How this three pound organ composed of water fat and protein turned a mammal species into the dominant animal on earth is the story Allen tells

Evolution of the Primate Brain, 2012-01-25 This volume of Progress in Brain Research provides a synthetic source of information about state of the art research that has important implications for the evolution of the brain and cognition in primates including humans This topic requires input from a variety of fields that are developing at an unprecedented pace genetics developmental neurobiology comparative and functional neuroanatomy at gross and microanatomical levels quantitative neurobiology related to scaling factors that constrain brain organization and evolution primate palaeontology including paleoneurology paleo anthropology comparative psychology and behavioural evolutionary biology Written by internationally renowned scientists this timely volume will be of wide interest to students scholars science journalists and a variety of experts who are interested in keeping track of the discoveries that are rapidly emerging about the evolution of the brain and cognition

Thinking Big Clive Gamble, John Gowlett, 2014-05-19 Tested against archaeological evidence this pathbreaking and provocative book shows we still inhabit social worlds that originated deep in our evolutionary past Our virtual contact lists whether on Facebook or Twitter are on average about 150 the so called Dunbar's Number some three times the size of those of apes and our early ancestors When and how did the brains of our hominin ancestors become human minds When and why did our capacity for language or art music and dance evolve The fruits of over seven years of research Thinking Big suggests that it was the need for early humans to live in ever larger social groups that drove the enlargement of the human brain and the development of the human mind The three authors are co directors of the research project Lucy to Language the Archaeology of the Social Brain Thinking Big is destined to become a classic Brian Fagan Emeritus Professor of Anthropology University of California

Mirror Neurons and the Evolution of Brain and Language Maksim Stamenov, Vittorio Gallese, 2002-01-01 The emergence of language social intelligence and tool development are what made homo sapiens sapiens differentiate itself from all other biological species in the world The use of language and the management of social and instrumental skills imply an awareness of intention and the consideration that one faces another individual with an attitude analogical to that of one's own The metaphor of mirror aptly comes to mind Recent investigations have shown that the human ability to mirror other's actions originates in the brain at a much deeper level than phenomenal awareness A new class of neurons has been discovered in the premotor area of the monkey brain

mirror neurons Quite remarkably they are tuned to fire to the enaction as well as observation of specific classes of behavior fine manual actions and actions performed by mouth They become activated independent of the agent be it the self or a third person whose action is observed The activation in mirror neurons is automatic and binds the observation and enaction of some behavior by the self or by the observed other The peculiar first to third person intersubjectivity of the performance of mirror neurons and their surprising complementarity to the functioning of strategic communicative face to face first to second person interaction may shed new light on the functional architecture of conscious vs unconscious mental processes and the relationship between behavioral and communicative action in monkeys primates and humans The present volume discusses the nature of mirror neurons as presented by the research team of Prof Giacomo Rizzolatti University of Parma who originally discovered them and the implications to our understanding of the evolution of brain mind and communicative interaction in non human primates and man Series B Human Evolution John L. Bradshaw, 2014-01-02 The last decade has seen an explosive burst of new information about human origins and our evolutionary status with respect to other species We have long been considered unique as upright bipedal creatures endowed with language the ability to use tools to think and introspect We now know that other creatures may be more or less capable of similar behaviour and that these human capacities in many cases have long evolutionary trajectories Our information about such matters comes from a diverse variety of disciplines including experimental and neuropsychology primatology ethology archaeology palaeontology comparative linguistics and molecular biology It is the interdisciplinary nature of the newly emerging information which bears upon one of the profoundest scientific human questions our origin and place in the animal kingdom whether unique or otherwise which makes the general topic so fascinating to layperson student and expert alike The book attempts to integrate across a wide range of disciplines an evolutionary view of human psychology with particular reference to language praxis and aesthetics A chapter on evolution from the appearance of life to the earliest mammals is followed by one which examines the appearance of primates hominids and the advent of bipedalism There follows a more detailed account of the various species of Homo the morphology and origin of modern H sapiens sapiens as seen from the archaeological palaeontological and molecular biological perspectives The origins of art and an aesthetic sense in the Acheulian and Mousterian through to the Upper Palaeolithic are seen in the context of the psychology of art Two chapters on language address its nature and realization centrally and peripherally the prehistory and neuropsychology of speech and evidence for speech and or language in our hominid ancestors A chapter on tool use and praxis examines such behaviour in other species primate and non primate the neurology of praxis and its possible relation to language Encephalization and the growth of the brain phylogenetically and ontogenetically and its relationship to intellectual capacity leads on finally to a consideration of intelligence social intelligence consciousness and self awareness A final chapter reviews the issues covered The book of around 70 000 words of text includes over 500 references over half of which date from 1994 or later *From Monkey Brain to Human Brain*

Stanislas Dehaene, 2005 Leaders in cognitive psychology comparative biology and neuroscience discuss patterns of convergence and divergence seen in studies of human and nonhuman primate brains The extraordinary overlap between human and chimpanzee genomes does not result in an equal overlap between human and chimpanzee thoughts sensations perceptions and emotions there are considerable similarities but also considerable differences between human and nonhuman primate brains From Monkey Brain to Human Brain uses the latest findings in cognitive psychology comparative biology and neuroscience to look at the complex patterns of convergence and divergence in primate cortical organization and function Several chapters examine the use of modern technologies to study primate brains analyzing the potentials and the limitations of neuroimaging as well as genetic and computational approaches These methods which can be applied identically across different species of primates help to highlight the paradox of nonlinear primate evolution the fact that major changes in brain size and functional complexity resulted from small changes in the genome Other chapters identify plausible analogs or homologs in nonhuman primates for such human cognitive functions as arithmetic reading theory of mind and altruism examine the role of parietofrontal circuits in the production and comprehension of actions analyze the contributions of the prefrontal and cingulate cortices to cognitive control and explore to what extent visual recognition and visual attention are related in humans and other primates The Fyssen Foundation is dedicated to encouraging scientific inquiry into the cognitive mechanisms that underlie animal and human behavior and has long sponsored symposia on topics of central importance to the cognitive sciences *Human Evolution Through Developmental Change* Nancy Minugh-Purvis, Ken McNamara, 2002-01-11 This book reflects two major strands of research in the study of human heterochrony the change in the timing and rate of development of individuals **Developmental Approaches to Human Evolution** Julia C. Boughner, Campbell Rolian, 2016-02-16 Developmental Approaches to Human Evolution encapsulates the current state of evolutionary developmental anthropology This emerging scientific field applies tools and approaches from modern developmental biology to understand the role of genetic and developmental processes in driving morphological and cognitive evolution in humans non human primates and in the laboratory organisms used to model these changes Featuring contributions from well established pioneers and emerging leaders this volume is designed to build research momentum and catalyze future innovation in this burgeoning field The book's broad research scope encompasses soft and hard tissues of the head and body including the skeleton special senses and the brain Developmental Approaches to Human Evolution is an invaluable resource on the mechanisms of primate and vertebrate evolution for scholars across a wide array of intersecting disciplines including primatology paleoanthropology vertebrate morphology evolutionary developmental biology and health sciences **Hominid Evolution** Valerie Strong, Heather White, 1985 Papers by M H Wolpoff and P J Habgood separately annotated **Race and Human Evolution** Milford H. Wolpoff, Rachel Caspari, 1997 Race and Human Evolution shows how the debate over the Eve theory reflects a long history of theories about human origins and race that has been fraught with

social and political implications **A 150 years' celebration of darwin's book on human evolution and sexual selection: Its legacy and future prospects** Marco Antonio Correa Varella,Jaroslava Varella Valentova,Catherine Salmon,Barnaby James Wyld Dixon,Marina Butovskaya,Anabela Pinto Pinto,Boguslaw Pawlowski,Carol Cronin Weisfeld,2023-07-06 **Late Cenozoic Environments and Hominid Evolution** Peter Andrews,Peter Banham,1999 Part 3 Quaternary Environments with particular emphases on the English Midlands western Scotland and southern Africa BOOK JACKET Throughout this commemorative volume the determination of editors and authors to place the results of specialist research into their environmental context is perhaps the clearest indication of the visionary influence of Bill Bishop BOOK JACKET Women In Human Evolution Lori Hager,2005-08-18 This volume the first of it s kind examines the role of women paleontologists and archaeologists in a field traditionally dominated by men Women researchers in this field have questioned many of the assumptions and developmental scenarios advanced by male scientists As a result of such efforts women have forged a more central role in models of human development and have radically altered the way in which human evolution is perceived This history of the feminist critique of science is of profound significance and will be of interest to all those who work in the fields of anthropology archaeology paleontology and human biology *Encyclopedia of Human Evolution and Prehistory* Eric Delson,Ian Tattersall,John Van Couvering,Alison S. Brooks,2004-11-23 Praise for the first edition The most up to date and wide ranging encyclopedia work on human evolution available American Reference Books Annual For student researcher and teacher the most complete source of basic information on the subject Nature A comprehensive and authoritative source filling a unique niche essential to academic libraries important for large public libraries Booklist RBB Human Evolution Dr. Geetika Saini ,2025-03-21
