Brainchildren Essays On Designing Minds:

Brainchildren Daniel C. Dennett, 1998-02-17 A new collection of wide ranging essays from one of cognitive science's most distinguished figures. Minds are complex artifacts, partly biological and partly social. Only a unified multidisciplinary approach will yield a realistic theory of how they came into existence and how they work. One of the foremost workers in this multidisciplinary field is Daniel Dennett. This book brings together his essays on the philosophy of mind, artificial intelligence, and cognitive ethology that appeared in inaccessible journals from 1984 to 1996. Highlights include *Can Machines Think?*, *The Unimagined Preposterousness of Zombies*, *Artificial Life as Philosophy*, and *Animal Consciousness: What Matters and Why*. Collected in a single volume, the essays are now available to a wider audience.

Brainchildren Daniel Clement Dennett, 1998. Minds are complex artifacts, partly biological and partly social. This book collects together the essays of Daniel Dennett on the philosophy of mind, artificial intelligence, and cognitive ethology that appeared in journals from 1984 to 1996.

Furnishing the Mind Jesse J. Prinz, 2004-08-20 Western philosophy has long been divided between empiricists who argue that human understanding has its basis in experience and rationalists who argue that reason is the source of knowledge. A central issue in the debate is the nature of concepts, the internal representations we use to think about the world. The traditional empiricist thesis that concepts are built up from sensory input has fallen out of favor. Mainstream cognitive science tends to echo the rationalist tradition with its emphasis on innateness. In *Furnishing the Mind*, Jesse Prinz attempts to swing the pendulum back toward empiricism. Prinz provides a critical survey of leading theories of concepts, including imagism, definitionism, prototype theory, exemplar theory, the theory theory, and informational atomism. He sets forth a new defense of concept empiricism that draws on philosophy, neuroscience, and psychology, and introduces a new version of concept empiricism called proxytype theory. He also provides accounts of abstract concepts, intentionality, narrow content, and concept combination. In an extended discussion of innateness, he covers Noam Chomsky's arguments for the innateness of grammar, developmental psychologists' arguments for innate cognitive domains, and Jerry Fodor's argument for radical concept nativism.

The Animal Mind Kristin Andrews, 2014-10-30 The study of animal cognition raises profound questions about the minds of animals and philosophy of mind itself. Aristotle argued that humans are the only animal to laugh, but in recent experiments rats have also been shown to laugh. In other experiments, dogs have been shown to respond appropriately to over two hundred words in human language. In this introduction to the philosophy of animal minds, Kristin Andrews introduces and assesses the essential topics, problems, and debates as they cut across animal cognition and philosophy of mind. She addresses the following key topics: what is cognition and what is it to have a mind? What questions should we ask to determine whether behaviour has a cognitive basis? The science of animal minds explained: ethology, behaviourist psychology, and cognitive ethology. Rationality in animals: animal consciousness, what does research into pain and the emotions reveal? What can empirical evidence about animal behaviour tell us about philosophical theories of

consciousness does animal cognition involve belief and concepts do animals have a Language of Thought animal communication other minds do animals attribute mindedness to other creatures moral reasoning and ethical behaviour in animals animal cognition and memory Extensive use of empirical examples and case studies is made throughout the book These include Cheney and Seyfarth's vervet monkey research Thorndike's cat puzzle boxes Jensen's research into humans and chimpanzees and the ultimatum game Pankseep and Burgdorf's research on rat laughter and Clayton and Emery's research on memory in scrub jays Additional features such as chapter summaries annotated further reading and a glossary make this an indispensable introduction to those teaching philosophy of mind animal cognition It will also be an excellent resource for those in fields such as ethology biology and psychology

All Things Are Full of Gods David Bentley Hart, 2024-08-27 A world renowned philosopher's genre defying exploration of the mystery of consciousness In a blossoming garden located far outside all worlds a group of aging Greek gods have gathered to discuss the nature of existence the mystery of mind and whether there is a transcendent God from whom all things come Turning to Eros Psyche asks Do you see this flower my love So begins David Bentley Hart's unprecedented exploration of the mystery of consciousness Writing in the form of a Platonic dialogue he systematically subjects the mechanical view of nature that has prevailed in Western culture for four centuries to dialectical interrogation Powerfully rehabilitating a classical view in which mental acts are irreducible to material causes he argues through the gods exchanges that the foundation of all reality is spiritual or mental rather than material The structures of mind organic life and even language together attest to an infinite act of intelligence in all things that we may as well call God Engaging contemporary debates on the philosophy of mind free will revolutions in physics and biology the history of science computational models of mind artificial intelligence information theory linguistics cultural disenchantment and the metaphysics of nature Hart calls readers back to an enchanted world in which nature is the residence of mysterious and vital intelligences He suggests that there is a very special wisdom to be gained when we in Psyche's words devote more time to the contemplation of living things and less to the fabrication of machines

Consciousness and Subjectivity Sofia Miguens, Gerhard Preyer, 2013-05-02 Issues of subjectivity and consciousness are dealt with in very different ways in the analytic tradition and in the idealistic phenomenological tradition central to continental philosophy This book brings together analytically inspired philosophers working on the continent with English speaking philosophers to address specific issues regarding subjectivity and consciousness The issues range from acquaintance and immediacy in perception and apperception to the role of agency in bodily mindedness to self determination Selbstbestimmung through free action Thus involving philosophers of different traditions should yield a deeper vision of consciousness and subjectivity one relating the mind not only to nature or to first person authority in linguistic creatures questions which in the analytic tradition are sometimes treated as exhausting the topic but also to many other aspects of mind's understanding of itself in ways which disrupt classic inner outer boundaries

Keeley, 2006 Offers an introduction to Churchland's work alongside a critique of his most famous philosophical positions Foundations of Artificial Intelligence and Robotics Wendell H. Chun, 2024-12-24 Artificial intelligence AI is a complicated science that combines philosophy cognitive psychology neuroscience mathematics and logic logicism economics computer science computability and software Meanwhile robotics is an engineering field that complements AI There can be situations where AI can function without a robot e.g. Turing Test and robotics without AI e.g. teleoperation but in many cases each technology requires each other to exhibit a complete system having smart robots and AI being able to control its interactions i.e. effectors with its environment This book provides a complete history of computing AI and robotics from its early development to state of the art technology providing a roadmap of these complicated and constantly evolving subjects Divided into two volumes covering the progress of symbolic logic and the explosion in learning deep learning in natural language and perception this first volume investigates the coming together of AI the mind and robotics the body and discusses the state of AI today Key Features Provides a complete overview of the topic of AI starting with philosophy psychology neuroscience and logicism and extending to the action of the robots and AI needed for a futuristic society Provides a holistic view of AI and touches on all the misconceptions and tangents to the technologies through taking a systematic approach Provides a glossary of terms list of notable people and extensive references Provides the interconnections and history of the progress of technology for over 100 years as both the hardware Moore's Law GPUs and software i.e. generative AI have advanced Intended as a complete reference this book is useful to undergraduate and postgraduate students of computing as well as the general reader It can also be used as a textbook by course convenors If you only had one book on AI and robotics this set would be the first reference to acquire and learn about the theory and practice Mind in Everyday Life and Cognitive Science Sunny Y. Auyang, 2001-03-15 Sunny Auyang tackles what she calls the large pictures of the human mind exploring the relevance of cognitive science findings to everyday mental life Auyang proposes a model of an open mind emerging from the self organization of infrastructures which she opposes to prevalent

models that treat mind as a disembodied brain or computer subject to the control of external agents such as neuroscientists and programmers Although cognitive science has obtained abundant data on neural and computational processes it barely explains such ordinary experiences as recognizing faces feeling pain or remembering the past In this book Sunny Auyang tackles what she calls the large pictures of the human mind exploring the relevance of cognitive science findings to everyday mental life Auyang proposes a model of an open mind emerging from the self organization of infrastructures which she opposes to prevalent models that treat mind as a disembodied brain or computer subject to the control of external agents such as neuroscientists and programmers Her model consists of three parts 1 the open mind of our conscious life 2 mind s infrastructure the unconscious processes studied by cognitive science and 3 emergence the relation between the open mind and its infrastructure At the heart of Auyang s model is the mind that opens to the world and makes it intelligible A person with an open mind feels thinks recognizes believes doubts anticipates fears speaks and listens and is aware of I together with it and thou Cognitive scientists refer to the binding problem the question of how myriad unconscious processes combine into the unity of consciousness Auyang approaches the problem from the other end by starting with everyday experience rather than with the mental infrastructure In so doing she shows both how analyses of experiences can help to advance cognitive science and how cognitive science can help us to understand ourselves as autonomous subjects

The Reflexive Nature of Consciousness Greg Janzen, 2008 Combining phenomenological insights from Brentano and Sartre but also drawing on recent work on consciousness by analytic philosophers this book defends the view that conscious states are reflexive and necessarily so i.e. that they have a built in implicit awareness of their own occurrence such that the subject of a conscious state has an immediate non objectual acquaintance with it As part of this investigation the book also explores the relationship between reflexivity and the phenomenal or what it is like dimension of conscious experience defending the innovative thesis that phenomenal character is constituted by the implicit self awareness built into every conscious state This account stands in marked contrast to most influential extant theories of phenomenal character including qualia theories according to which phenomenal character is a matter of having phenomenal sensations and representationalism according to which phenomenal character is constituted by representational content Series A
