Ackerman, 2012-10-30 From the New York Times bestselling author of *The Zookeeper's Wife* an ambitious and enlightening work that combines an artist's eye with a scientist's erudition to illuminate as never before the magic and mysteries of the human mind Long treasured by literary readers for her uncommon ability to bridge the gap between art and science celebrated scholar artist Diane Ackerman returns with the book she was born to write Her dazzling new work *An Alchemy of Mind* offers an unprecedented exploration and celebration of the mental fantasia in which we spend our days and does for the human mind what the bestselling *A Natural History of the Senses* did for the physical senses Bringing a valuable female perspective to the topic Diane Ackerman discusses the science of the brain as only she can with gorgeous immediate language and imagery that paint an unusually lucid and vibrant picture for the reader And in addition to explaining memory thought emotion dreams and language acquisition she reports on the latest discoveries in neuroscience and addresses controversial subjects like the effects of trauma and male versus female brains In prose that is not simply accessible but also beautiful and electric Ackerman distills the hard objective truths of science in order to yield vivid heavily anecdotal explanations about a range of existential questions regarding consciousness human thought memory and the nature of identity **How the Brain Grows** Ann McIntosh Hoffelder, Robert L. [The Leader's Brain](#) Bastiaan Heemsbergen, 2004 In his new book Dr Heemsbergen shows that the best insights into leadership can come not from what leaders are thinking but from how leaders think The author suggests a fresh approach to how leaders can think and describes the necessary processes and tools required to improve the leader's capability in volatile and complex times Leveraging extensive research findings and observations the author makes some unexpected connections between brain research and how leaders think the artistic process our knowledge of the nonconscious and leadership development Heemsbergen a psychologist university lecturer and developer of leaders has developed new powerful metaphor tools from artistic practice and brain research to

help leaders probe deeply into their perceptions thoughts and emotions and uncover those things that they don't even know they don't know There is much that goes on in the mind that we're not aware of and most of what influences what leaders say and do occurs below the water line of the iceberg at the nonconscious level That's why new methods techniques and tools are required to get at what leaders don't know they know Leaders also need to develop a beginner's mind become better sensors and see things with fresh eyes Much of what leaders do in organizations is based on the idea of finding the right answer to a question Unfortunately it is often assumed there is only one right answer and we do not need to think about the topic further In real life much of what is known is in a state of flux waiting for a new bit of evidence to modify the knowledge To assist leaders in becoming more effective the author has developed methods and tools based on neuropsychology psychoanalysis and artistic practice He calls it the H SAT the Heemsbergen Sensory Awareness Tools These tools assist in uncovering the mental models that guide leadership behavior illuminating leadership blindspots and improving leadership decision making capability Heemsbergen concludes the eye ear and body have been the most important tools for the gathering of information since the dawn of time Using time tested methods of artistic practice in combination with breakthroughs in brain research opens the possibility for uncovering hidden leadership talent to deal more effectively with a complex and volatile world

Brain-powered Science Thomas O'Brien, 2010 How can a long metal needle pass through a balloon without popping it How can water flow at very different rates through two identical funnels How can a stick placed on a table under several sheets of newspaper and extended over the edge of a table snap when quickly struck without lifting or tearing the paper Author Thomas O'Brien takes these and 30 more science inquiry activities to a higher level in this book for educators who love to surprise and challenge their students with unanticipated results Using experiments based on the science of a discrepant event an experiment or demonstration in which the outcome is not what students expect O'Brien shows how learners can be motivated to reconsider their preconceived notions and think more closely about what has actually occurred and the underlying scientific explanations What makes this volume more valuable than a mere activity book is the addition of a science education component to the extensive science content found in each activity Each discrepant event is shown to be analogous to a pedagogical principle Speaking directly to teachers O'Brien writes Your participation as teacher as learner experimenter rather than simply passive reader in these minds on activities will lead you to question and help you to revise your implicit assumptions about the nature of science teaching and learning At the same time you will develop expertise with activities that you can use with your own students The dual purpose activities thus allow you to unlock two doors with one key the doors to your own learning and to your students learning The detailed analogies between the activities and science learning make the book an ideal resource for middle and high school teachers science teacher educators and their preservice students and professional development specialists alike This thorough and thought provoking text includes more than 200 up to date internet resources as well as extensions to each of the physical science biology and

Integrating Emotions and Cognition Throughout the Lifespan Gisela Labouvie-Vief, 2015-01-07 This book synthesizes the literature on emotional development and cognition across the lifespan The book proposes a core language by which to describe positive and problematic developmental changes by recourse to a parsimonious set of core principles such as elevations or declines in tension thresholds and their relation to the waxing and waning of the cognitive system over the life course It integrates similarly the lifelong consequences of the positive or damaging aspects of the social milieu in fostering increases in tension thresholds with their advanced capacity for maintaining equilibrium and warding off stress versus a lowering of tension thresholds with disturbances of equilibrium maintenance and heightened susceptibility to stress and deregulation
