Taste and Healthy Eating in the Context of Well-being, Sustainability and 21st Century Food Science Hisayuki Uneyama, Ken Iwatsuki, Nobuyuki Sakai, Keiko Yasumatsu, 2025-04-24 In the Anthropocene the global food system affects the geosystem and its biosphere and thus it is important for us to reconsider our eating styles and develop new and sustainable food systems This is particularly crucial since we are facing the risk of morbidity and mortality result from unhealthy diets In 2019 the EAT Lancet commission offered a new food standard that gratifies both health and environmental sustainability calling it the planetary health diet It is necessary for us to understand the sensory characteristics of the planetary health diet and how we humans select consume and develop foods and beverages to satisfy the standards of this new dietary approach These understandings add more fuel to promote the achievements of Sustainable Development Goals and of the planetary health diet This Research Topic aims to reveal the neural and biological mechanisms underlying the perception and selection of the planetary health diet Currently we have only little knowledge about taste and flavor perception so we do not know what sensory characteristics of foods are liked Also we do not know the mechanisms involved in selecting certain foods For example we know that excessive salt intake induces hypertension and or obesity but often we do not select low salt foods even when suffering from the high blood pressure We also know that animal models e.g mice rats consume more of diets that impart a good taste for them As humans however we do not always eat so much of foods that may taste good for us and may consume foods or beverages that are not so enjoyable for us Thus a multidisciplinary approach is needed to challenge these topics

Preventive Nutrition Adrienne Bendich, Richard J. Deckelbaum, 2001-03-06 Nutrition has been recognized as a major determinant of health for centuries Traditionally nutritional sciences have primarily targeted the prevention of diseases resulting from clinical deficiencies of essential nutrients such as scurvy and rickets Contemporary nutritional research has focused on the prevention of major diseases of Western civilization particularly cardiovascular disease and cancer as well as promoting maternal and child health and healthy aging Heart disease and cancer which were rare in most developing countries several decades ago are increasing dramatically in these countries in parallel with economic development and dietary transitions decreases in infectious diseases and increasing sedentary lifestyle and obesity Substantial evidence indicates major chronic diseases such

as coronary heart disease type 2 diabetes and some cancers are largely preventable by relatively simple diet and lifestyle modifications Despite the great potential of nutrition in preventing diseases and improving health nutrition is not routinely emphasized in the education and training of physicians and other health care professionals This has resulted in inadequate nutritional knowledge and lack of skills in providing dietary counseling among many health care professionals Further more in the past decade the public s access to nutritional information has been increasing rapidly particularly through the Internet There are now hundreds of websites providing a wide range of nutritional information and selling numerous dietary products Because of the explosion in nutritional information the public s demand for nutritional advice has been increasing rapidly and will continue to rise

Nutrition in the Prevention and Treatment of Disease Ann M. Coulston, Carol J. Boushey, Mario Ferruzzi, 2013 This comprehensive clinical nutrition textbook uniquely focuses on the clinical applications and disease prevention of nutrition clearly linking the contributions of basic science to applied nutrition research and in turn to research based patient care guidelines
