*Data Security Breaches* Rita Tehan, 2008 Personal data security breaches are being reported with increasing regularity Within the past few years numerous examples of data such as Social Security bank account credit card and driver s license numbers as well as medical and student records have been compromised A major reason for the increased awareness of these security breaches is a California law that requires notice of security breaches to the affected individuals This law implemented in July 2003 was the first of its kind in the nation State data security breach notification laws require companies and other entities that have lost data to notify affected consumers As of January 2007 35 states have enacted legislation requiring companies or state agencies to disclose security breaches involving personal information Congress is considering legislation to address personal data security breaches following a series of high profile data security breaches at major financial services firms data brokers including ChoicePoint and LexisNexis and universities In the past three years multiple measures have been introduced but to date none have been enacted

**Breached!** Daniel J. Solove, Woodrow Hartzog, 2022 Despite the passage of countless data security laws data breaches are increasing at a record pace Why is the law failing to stop them In *Breached* Daniel Solove and Woodrow Hartzog argue that ironically the law is failing because it is too focused on individual breaches and not the larger context in which many actors contribute to poor data security and make breaches much more harmful Drawing insights from many fascinating stories about data breaches the authors explain why the law fails and even worsens the problem Engaging and accessible *Breached* will reshape our thinking about one of the most thorny problems in business and consumer life today
