Pietsch, 2004-12-27 An up to date overview dealing with the occurrence and key applications of agglomeration including unwanted adhesion and beneficial size enlargement in pharmaceutical food and animal feed chemical fertilizer and agrochemical mineral building material and ceramic metal solid fuel as well as other industries Furthermore the book emphasizes recent developments at the level of single particles and applications of agglomeration phenomena in nanotechnology The author has a vast academic and industrial experience as researcher teacher developer designer vendor and user He is an expert and consultant in the field of agglomeration its technologies and products This background makes the detailed evaluation of the subject possible Wolfgang Pietsch has held a number of leading positions in both US and German companies and is a frequent speaker at conferences and seminars He has already written three earlier books on agglomeration Intended for everybody working in companies that process and handle particulate solids this book helps in understanding and controlling unwanted agglomeration as well as promoting the application development and improvement of methods for the beneficial use of agglomeration *Agglomeration in Industry* Wolfgang Pietsch, 2005

Industrial Crystallization Gerard Capellades, Fredrik L. Nordstrom, 2025-06-12 The goal of this primer is to introduce crystallization to newcomers in the field with three primary readers in mind 1 new graduate students starting a crystallization project 2 scientists in industry who may be familiar with general chemistry and or crystallography and want to get an introduction to the topics behind crystallizer design and 3 students taking a crystallization elective course or a crystallization module in a broader separations course Contrary to a textbook or review article this is a digital primer where the authors prioritize simplicity over completeness and breadth over depth Each chapter in the primer contains selected references such as Read These Next for those who wish to dive deeper into a specific topic Crystallization can be found in multiple areas within materials design and separations The product of a crystallization step may be a single crystal or a powder It may be composed of small organic molecules inorganic salts biological molecules or single elements Similarly it may have been crystallized from its molten state or pre dissolved in an appropriate solvent and then crystallized via e g cooling antisolvent addition a chemical reaction or solvent evaporation Each of these combinations may be their field of research requiring very different approaches and considerations that warrant their primers This primer focuses on solvent mediated crystallization as a separation process often called solution crystallization with solid liquid suspensions being the main product

Stiff Extrusion Briquetting in Metallurgy Ivan Kurunov, Aitber Bizhanov, 2017-12-20 This book explains how the specifics of Stiff Extrusion influence on the metallurgical properties of Extruded Briquettes The practical experience of the utilization of Stiff Extrusion in metallurgy obtained so far suggests that this technology can substitute partially or by 100% environmentally unfriendly sintering The authors start reviewing the existing briquetting technologies providing the reader later on with the specifics of stiff extrusion briquetting technology Other aspects treated are the applications of

extruded briquettes on blast furnace and for the production of manganese ferro alloys The authors suggest stuff extrusion briquetting technology for direct reduction iron production and list several alternative unconventional applications

Briquetting in Metallurgy Aitber Bizhanov,2022-08-18 In the arsenal of ways of carbon consumption and emissions reduction the main tasks of modern metallurgy briquetting occupies significant places Today briquetting is a cost effective industrially mastered technology capable to process natural and anthropogenic materials without their preliminary high temperature treatment The book summarizes the scientific research and the practice of briquettes use for the smelting of cast iron steel ferroalloys and the production of direct reduced iron Comparison with sintering and pelletization is given Particular attention is paid to debunking the myths about briquetting which are firmly rooted in the minds of metallurgists

Food Processing Handbook James G. Brennan, 2006-05-12 Focusing on the technology involved this handbook describes the principles as well as the equipment

used and the changes physical chemical microbiological and organoleptic that occur during food preservation In doing so the text covers in detail such techniques as post harvest handling thermal processing evaporation and dehydration freezing irradiation high pressure processing emerging technologies baking extrusion frying and packaging In addition current concerns about the safety of processed foods and control of food processes are addressed as are the impact of processing on the environment and separation and conversion operations widely used in the food industry Scientists and engineers involved in food manufacture research and development in both industry and academia will benefit greatly from the contents as will students studying food related topics at undergraduate and postgraduate levels Biomass Compaction Peter

Križan, 2021-12-09 This book discusses the scientific process of biomass compaction focusing on pressing chamber parameters and their influence on the quality of extrusions from biomass It yields new knowledge in the field of wood biomass pressing technology and contains a thorough and detailed theoretical analysis of the pressing chamber of pressing machines and the influence they have on the resulting quality of extrusions Coverage includes the proposal and evaluation of experimental research dealing with the definition of different pressing chamber parameters in pressing machines and their effects on the quality of extrusions definition and specification of the dependencies of chamber parameters based on the resulting quality of extrusion given by the mechanical indicators of quality are also explored Furthermore the work describes the design and manufacture of an experimental pressing stand which allows for experiments to be performed determining the effects that some technological material and construction parameters have on the resulting quality of extrusions The desired pressing method length and conicity of the pressing chamber are experimentally determined through the uniaxial compaction of wood biomass where results and dependencies are expressed graphically Biomass Compaction The Effects of Pressing Chamber Design Parameters on Extrusion Quality will be a welcomed resource for researchers and engineers working for producers of solid biofuels from biomass densification briquetting pelleting or compacting machines producers as well as technology plant operators and those working in the biomass treatment area The Densification Process of

Wood Waste Peter Krizan, 2015-04-24 This book examines the very current issue of wood waste treatment to a solid biofuel for energy recovery The book is dedicated to research in the densification processes of wood waste and its mathematical description for uniaxial densification into compact biofuels briquettes This monograph derived from an experimental research of densification process in laboratory conditions and also in real technologies in practice provides a thorough understanding of the influencing parameters impact during densification of wood waste into solid biofuel The book shows the experimental strategy to determine the effects of individual parameters and specifies their impact on the resulting density of the briquettes The publication also defines the level of importance of the results in terms of optimization of the densification machine s pressing chamber Using a designed mathematical model which was a result of experimental research and which can serve to predict the density of briquettes for some predefined densification conditions and can aid in the design of

densification machines the author has made this topic accessible beyond his discipline biofuels producers and the academic community
