**Aggression and Evolution** ,1973      **The Evolution of Violence** Todd K. Shackelford,Ranald D. Hansen,2013-11-09

This volume is an interdisciplinary exploration of our understanding of the causes and consequences of violence Represented in its chapters are noted scholars from a variety of fields including psychology anthropology law and literature The contributions reflect a broad scope of inquiry and diverse levels of analysis With an underlying evolutionary theme each of the contributors invoke their separate areas of expertise offering empirical and theoretical insights to this complex subject The multi faceted aspect of the book is meant to engender new perspectives that will synthesize current knowledge and lead to a more nuanced understanding of an ever timely issue in human behavior Of additional interest is a foreword written by world renowned psychologist Steven Pinker and an afterword by noted evolutionary scholar Richard Dawkins      Human Evolution and Male Aggression Anne Innis Dagg, Lee Harding, 2012 Popular and scientific literature is still permeated with male aggression as a product of long evolution The fact that violent aggression appears in the archeological records less than half as long ago as artistic expression should give pause to any student of human behavior Humans are nothing like apes chimpanzees bonobos gorillas or orangutans which developed their mating systems independently from humans and from each other Chimpanzees have a promiscuous mating system bonobos are completely hedonistic gorillas have a harem system and orangutans are essentially solitary In those species males may compete with each other so aggression can occur Gibbons would be a better model for human behavior because they live in nuclear families several ages of dependant offspring living with adults for many years and are never aggressive toward each other Nuclear families are intimately tied to peaceful living because once established there is no need for aggression except for defence of territory against outsiders Although male aggression is a sad fact of modern society factors other than genetic heritage should be examined to explain this This book reviews the recent advances in the knowledge of human evolution that have greatly changed our conceptions It has been uncovered that humans are nothing like chimpanzees and far less like baboons Early humans never knuckle walked left the jungle for the savannah where they roamed widely in dispersed populations and for more than four million years lived in small groups or relatively peaceable societies with fathers raising children and joining with other adult males for community projects Human Evolution and Male Aggression dispels misconceptions based on flawed interpretations of biology and behavior It tells the compelling story of the human male s peaceful past It summarizes recent advances in understanding of bones brains hormones and genetics that reveals humans for who they are In reviewing the behavior of other primate males and their relationship to females and infants it sets the stage for a new paradigm of male behaviour one in which aggression though possible is suppressed most of the time in favor of affiliative behaviors that benefit females infants and society as a whole Encompassing topics relevant to biological and social sciences this book will be of interest to students of primatology evolutionary biology anthropology and human behaviour      *Evolution's Empress* Maryanne L.
