

10 WAYS TO *Slow Aging* NATURALLY

Wrinkles and sagging skin isn't just a sign of aging -- it indicates inflammation, stress and a poor diet. Skip the expensive treatments and slow the aging process naturally with these 10 tips.

1. Ditch The Sugar

Excess sugar dehydrates our natural supply of with collagen and elastin, making your skin lose its elasticity. Cut back on the sweet stuff and watch your skin go from dull to vibrant!

2. Go Gluten-Free

Wheat and other starches can spike blood sugar levels, making it harder for important skin-tightening minerals to be absorbed by the body. Swap the breads and pasta for veggies!

3. Drink More Water

Chronic dehydration is a common culprit of aging skin. Drink more water to help to restore elasticity to the skin and add a more youthful glow. Aim for about two liters (or 8 cups) of water a day!

4. Reduce Stress

When you're stressed, cortisol surges through your body, robbing it of essential minerals needed for healthy glowing skin. Reduce stress through meditation, yoga, walking outside or enjoying a hot bath before bed.

5. Load Up On Antioxidants

Every day we're exposed to numerous toxins that create free radical damage, causing premature aging. Fight back by loading up on a variety of fruits and vegetables to ensure you're giving your body enough nutrients.

6. Eat More Protein

Protein is essential for repairing and constructing tissue, and it helps keep cortisol levels in check. Eat lots of seafood, chicken, eggs and broccoli to reduce sagging skin and prevent premature aging.

7. Lift More Weights

Weight lifting is great for tightening skin! Plus, having lean muscle mass means you burn calories more efficiently, keeping you healthy.

8. Use Natural Beauty Remedies

Toxic chemicals are found in many beauty care products, making our skin age at a faster rate. Toss your store-bought lotions and creams and make your own skincare products from natural, safe ingredients, like coconut oil and raw honey.

9. Get More Sleep

Not getting enough sleep? It could cause a hormonal cascade that increases cortisol levels, robbing you of your glow. Create a nighttime ritual to help you unwind before bed, then get ready for healing, restorative sleep!

10. Eat More Fat

Healthy fatty acids like avocados, fish, and olive oil help nourish the skin internally, leading to more radiant skin.

Aging Slowly

Mark Gerzon

Aging Slowly:

Sex and Longevity: Sexuality, Gender, Reproduction, Parenthood J.-M. Robine, T.B.L. Kirkwood, M.

Allard, 2012-12-06 A central concept in the evolutionary theory of senescence is the idea that ageing results from life history trade offs. In particular, the disposable soma theory suggests that longevity is determined through the setting of longevity assurance mechanisms so as to provide an optimal compromise between investments in somatic maintenance including stress resistance and in reproduction. Comparative studies among mammalian species confirm that cells from long lived species appear to have a greater intrinsic capacity to withstand stresses than cells from short lived species. Childbearing at older ages has become increasingly common in modern societies because of demographic changes, medical progress and personal choice. While the detrimental effects of late reproduction on infant mortality and genetic diseases have been well documented, little is known about the possible postponed detrimental effects of late parenting.

The Molecular Genetics of Aging

Siegfried Hekimi, 2012-12-06 The molecular genetics of aging or life span determination is an expanding field. One reason is because many people would consider it desirable if human life span could be extended. Indeed, it is difficult not to be fascinated by tales of the life and death of people who have succeeded in living a very long life. Because of this, we have placed at the head of this book the chapter by Perls et al on Centenarians and the Genetics of Longevity. Perls and his coauthors convincingly argue that while the average life expectancy might be mostly determined by environmental factors, because the average person has an average genotype, extremely long life spans are genetically determined. Of course, studying humans to uncover the genetics of aging is not ideal, not so much because one cannot easily perform experiments as because they live such a long time. This is why most of this book describes the current state of research with model organisms such as yeast, worms, flies and mice. Jaswinski focuses on yeast and how metabolic activity and stress resistance affect the longevity of *Saccharomyces cerevisiae*. In the process, he discusses the concept of aging as applied to a unicellular organism such as yeast and the importance of metabolism and stress resistance for aging in all organisms.

Aging Trends, 1992

The Future of Aging, 2010-08-17 Just as the health costs of aging threaten to bankrupt developed countries, this book makes the scientific case that a biological bailout could be on the way and that human aging can be different in the future than it is today. Here 40 authors argue how our improving understanding of the biology of aging and selected technologies should enable the successful use of many different and complementary methods for ameliorating aging and why such interventions are appropriate based on our current historical, anthropological, philosophical, ethical, evolutionary and biological context. Challenging concepts are presented together with in-depth reviews and paradigm-breaking proposals that collectively illustrate the potential for changing aging as never before. The proposals extend from today to a future many decades from now in which the control of aging may become effectively complete. Examples include sirtuin modulating pills, new concepts for attacking cardiovascular disease and cancer, mitochondrial rejuvenation, stem cell therapies and

regeneration tissue reconstruction telomere maintenance prevention of immunosenescence extracellular rejuvenation artificial DNA repair and full deployment of nanotechnology The Future of Aging will make you think about aging differently and is a challenge to all of us to open our eyes to the future therapeutic potential of biogerontology Honest Aging Rosanne M. Leipzig, 2023-01-10 Enriched by illustrations patient stories and deep dives into science and the latest research Honest Aging gives you the tools to take control of your health and well being as you age Aging of Organisms H.D. Osiewacz, 2013-11-11 Biological aging as the time depending general decline of biological systems associated with a progressively increasing mortality risk is a general phenomenon of great significance The underlying processes are very complex and depending on genetic and environment factors These factors encode or affect a network of interconnected cellular pathways In no system this network has been deciphered in greater detail However the strategy of studying various biological systems has led to the identification of pathways and specific modules and makes it obvious that aging is the result of different overlapping mechanisms and pathways Some of these appear to be conserved public among species others are specific or private and only of significance in one or a few organisms This volume in the series on Biology of aging and its modulation specifically focuses on organismic aging The book covers research on organisms from lower to higher complexity representing examples from very diverse taxa like photosynthetic plants fungi sponges nematodes flies birds and mammals Such a broad treatise of this complex topic provides a comprehensive flavor about the current issues dealt with in this rapidly growing scientific discipline Listening to Midlife Mark Gerzon, 1996-03-05 Based on interviews with a wide variety of men and women and research on the literature of adult development Mark Gerzon answers the question Is it possible that human beings experience a profound metamorphosis in midlife with a resounding yes *The Rejuvenation Solution* Robert D.
