**Bioluminescence** Hirobumi Suzuki, Katsunori Ogoh, 2021-12-15 This book contains seven chapters on bioluminescence techniques and organisms On the technical side the four chapters presented the fluorescent markers of proteins and nanocrystals imidazopyrazine type luciferin that emits light when bound to human serum albumin firefly luciferin that emits near infrared light and imaging technique for visualization of promoter activity in fruiting body formation of cellular slime molds Dictyostelium On the organismal side the three chapters presented recommendations for the commercial use of fireflies in urban areas from the perspective of conservation biology the origin of luciferin by predation in marine luminescent organisms and the ecology and behavior of luminescent organisms from sea to land which will be of interest to both professionals and students

**Bioluminescence** Marc Zimmer, 2015-10-01 What do giant squids mantis shrimp and fireflies have in common These animals along with a wide range of creatures are able to give off light this is called bioluminescence Different species use different chemistries to bioluminesce and they produce their light for a variety of reasons including communication hunting and self defense Bioluminescence is a unique and fascinating adaptation found in the animal kingdom Surprisingly about half of all known phyla a classification for animals that share the same body type contain some bioluminescent species Scientists don't yet understand all facets of bioluminescence but they have managed to harness the glow and use it in a myriad of ways One of the most important applications involves using bioluminescence as a microscope in medical studies For example laboratory scientists can create fluorescent malaria parasites to track the path by which the disease is spread from a mosquito to the animal it bites Bioluminescent proteins are also helping researchers learn more about cancer HIV and other viruses and complex neurological processes In fact bioluminescent proteins are so useful to twenty first century medicine that two groups of scientists one in 2008 and the other in 2014 were awarded the Nobel Prize in Chemistry for their work with these proteins and related technologies Even artists and fashion designers use bioluminescence in their work to create glowing light sensitive paintings and clothing lines Author Marc Zimmer a world renowned specialist in fluorescent proteins takes readers on a glowing journey into the frontiers of bioluminescence
