*Agricultural Production Efficiency* National Research Council. Committee on Agricultural Production Efficiency, 1975

Agricultural Production Efficiency National Research Council (U.S.). Committee on Agricultural Production Efficiency, 1975      *Agricultural Production Efficiency and Farm Size* Lakshmi Narayan Dutta, 1997      Agricultural Production Efficiency National academy of sciences, 1975      **Efficiency Measures in the Agricultural Sector** Armando Mendes, Emilian L. D. G. Soares da Silva, Jorge M Azevedo Santos, 2012-12-18 The editors draw on a 3 year project that analyzed a Portuguese area in detail comparing this study with papers from other regions Applications include the estimation of technical efficiency in agricultural grazing systems dairy beef and mixed and specifically for dairy farms The conclusions indicate that it is now necessary to help small dairy farms in order to make them more efficient These results can be compared with the technical efficiency of a sample of Spanish dairy processing firms presented by Magdalena Kapelko and co authors

**Migration, local off-farm employment, and agricultural production efficiency** Yang, Jin, Wang, Hui, Jin, Songqing, Chen, Kevin, Riedinger, Jeffrey, Chao, Peng, 2014-04-04 This paper studies the effect of local off farm employment and migration on rural households technical efficiency of crop production using a five year panel dataset from more than 2 000 households in five Chinese provinces While there is not much debate about the positive contribution of migration and local off farm employment to China s economy there is an increasing concern about the potential negative effects of moving labor away from agriculture on China s future food security This is a critical issue as maintaining self sufficiency in grain production will be critical for China to feed its huge population in the future Several papers have studied the impact of migration on production and yield with mixed results But the impact of migration on technical efficiency is rarely studied Methodologically we incorporate the correlated random effects approach into the standard stochastic production frontier model to control for unobservable that are correlated with migration and off farm employment decisions and technical efficiency The most consistent result that emerged from our econometric analysis is that neither migration nor local off farm employment has a negative effect on the technical efficiency of grain production which does not support the widespread notion that vast scale labor migration could negatively affect China s future food security

**Agricultural production efficiency** , 1975      **Production Efficiency and Productivity Change in Chinese Agriculture: a Case Study of Agricultural Production in Shanxi Province** Wenqiang Bao, 2016 This dissertation studies the production efficiency and productivity of agriculture in Shanxi province after Chinese economic reforms The main question about the economic aspects of agriculture we want to address is the performance of Chinese agriculture since 1980 We use a newly constructed county level input and output quantity data set to obtain technical efficiency and measure the Malmquist productivity index and its components We first use the nonparametric method of Data Envelopment Analysis DEA to obtain Pareto Koopmans measures of technical efficiency of individual counties in Shanxi province during year 1981 2010 in a multi output multi input

production framework We disaggregate overall efficiency into two components representing output and input efficiencies and evaluate the contribution of individual outputs and inputs to the measured level of overall efficiency We also examine the utilization of modern agricultural inputs compared to the traditional inputs Next We investigate the temporal and spatial nature of productivity growth of Chinese agriculture in Shanxi province The results indicate that growth in the Malmquist productivity index over the 1983-2010 periods was 1.2% annually for the entire province Decomposition of the Malmquist productivity index shows that technical change contributed to the growth in productivity by 0.8% per year while efficiency change increased productivity by 0.4% per year The results also show that the Malmquist index of productivity changes is fast moderate and slow growing in different groups The trend of the growth of productivity is also explained in this dissertation Finally across county variation in the DEA measure of efficiency and its components is investigated We identify a number of important factors and discuss their relevance as determinants of efficiency in agricultural production in Shanxi province We also evaluate the impact of three important policy changes named China's admission to WTO 2001 abolition of agricultural tax 2006 and subsidization of agricultural machinery 2007 on agricultural efficiency at both national and county level An analysis of the measured efficiency level can help to identify factors that enhance or hinder efficient resource utilization This becomes helpful for public policy for improving efficiency

*Agricultural Finance Review*, Efficiency and Productivity Growth in Agriculture in Asia for the Period 1985-2002 Jovita Laura M. Abara, 2007 The main concern of the world today is food security the need to feed an

increasing population This means increasing the food supply in each country by improving agricultural efficiency and productivity Agricultural productivity can be increased primarily thru technological change improved input use efficiency and conserving the resource base of the country FA02005 The study compares the efficiency and productivity growth of the agricultural sector of fifteen countries in Asia over the time period 1985 to 2002 To achieve this two methods were used the non parametric DEA approach and the parametric SFA method First The total factor productivity growth is estimated and decomposed using the DEA Malmquist Productivity Index and then the input and output slacks affecting the technical efficiency as well as technical inefficiency is estimated using four SFA models Aggregate Production without time variable Model 1A Improved Aggregate Production with time Model 1B Crop Production Model 2 and livestock production Model 3 The result of two DEA models indicate that the average annual total factor productivity index growth of 2.5 percent of 15 Asian countries was largely due to the positive technological change of 2.6 percent despite the low level of technical efficiency change of 0.2 percent Malaysia has the highest TFP growth index due to technological advancements as verified Lao PDR Mongolia and Sri Lanka incurred zero input and output slacks and are therefore considered very efficient and are peers to the other countries for 1985 and 2002 Results of the study indicate that in general the translog stochastic frontier model is the best representation of the data for the four SFA models Majority of the input resources are found to have a significant effect on production efficiency Machinery is insignificant in crop Model 2 livestock Model 3 and the improved aggregate production models Models 1 A and 1B land in livestock production and fertilizer in the improved aggregate production model The findings of the study also show that there is technical inefficiency effect in the frontier model Irrigated land and fertilizer as z variables show a statistically significant effect on its technical inefficiency Results imply that irrigation has a positive effect on its technical inefficiency and fertilizer has a negative effect on technical inefficiency In the improved aggregate production model irrigated land fertilizer and time show an insignificant effect on technical inefficiency The study highlighted the modeling of agricultural production efficiency extensively using four separate stochastic frontier models for the first time in the Asian region The study also modeled agricultural efficiency by using two extensive DEA models Malmquist and Multi stage

**Proceedings of the 2024 International Conference on Digital Economy and Marxist Economics (ICDEME 2024)** Yongjun Guan, Yan Duan, Tao Wang, Chuan Liang, 2024-12-31 This is an open access book 2024 International Conference on Digital Economy and Marxist Economics will be held grandly in Baise China from October 25 to 27 2024 2024 International Conference on Digital Economy and Marxist Economics ICDEME2024 is organized to investigate the intersections between contemporary digital economic practices and the theoretical frameworks established by Marxist economics In an era where digital innovation is reshaping traditional economic structures it becomes increasingly pertinent to revisit and re evaluate classical economic theories to understand

these transformations With rapid advancements in technology and the rise of the digital economy there are extensive opportunities and challenges that need thoughtful analysis and discourse This symposium serves as a platform for scholars researchers and practitioners to engage in meaningful discussions that bridge classical economic theories with the realities of modern digital economies The primary aim of this symposium is to foster a comprehensive understanding of how Marxist economic principles can be applied to analyze and critique contemporary trends in the digital economy The symposium seeks to promote interdisciplinary research stimulate academic discussions and offer new perspectives on the dynamics of digital capitalism By bringing together experts from various fields the conference aims to generate actionable insights that address both theoretical inquiries and practical implications Additionally it aspires to create a collaborative environment where participants can share research findings exchange ideas and develop strategies to leverage Marxist economic theories in understanding the complexities of our digital age The 2024 symposium will explore a range of research themes designed to delve deep into the interplay between digital and Marxist economics Key themes include Digital Labor and Capital which examines how digital platforms alter labor relations and capital accumulation processes Algorithmic Governance and Regulation focusing on the role of algorithms in shaping economic behavior and the need for regulatory frameworks Another crucial theme is Data Commodification and Surveillance which scrutinizes how data is transformed into a commodity and its implications for privacy and surveillance Additionally Marxist Theories in Digital Age invites scholars to reinterpret classical Marxist texts in the context of modern digital economies By concentrating on these pertinent themes the symposium aims to foster a nuanced understanding of digital economic phenomena through the lens of Marxist economics

**Strategies Of Digitalization And Sustainability In Agrifood Value Chains** Isabelle Piot-Lepetit, Fatima El Hadad-Gauthier, 2025-03-04  
Nowadays stakeholders of agrifood value chains are developing specific strategies regarding their sustainable transformations supported by digital technologies These strategies are designing new activities within and outside the whole value chains and in each of their specific segments such as raw products supplies and machinery production transformation transportation and logistics distribution retail and consumption The strategies developed by agrifood stakeholders related to the digitalization for more sustainability of their practices and activities are changing the way stakeholders are interacting and fuel in one way or another new reconfigurations of value chains Most often sustainability initiatives explore new value added activities goods and services while digital initiatives acknowledge the opportunities resulting from the use of digital solutions such as sensors the Internet of Things e commerce platforms blockchain or robots and advanced data analytics based on big data cloud computing technologies or artificial intelligence applications Digital and sustainable transformations have been explored in the literature for some time now by considering either the changes involved in farms companies and business activities or the necessary adjustments of the economic and regulatory environments However the setting up of strategies related to the digitalization for sustainable agrifood value chains has not often been investigated
