Wang, Paul Norton, 2018-04-20 An air conditioning system consists of components and equipment arranged in sequential order to control and maintain an indoor environment The goal is to provide a healthy and comfortable climate with acceptable air quality while being energy efficient and cost effective Air Conditioning and Refrigeration Engineering covers all types of systems from institutional and commercial to residential The book supplies the basics of design from selecting the optimum system and equipment to preparing the drawings and specifications It discusses the four phases of preparing a project gathering information developing alternatives evaluating alternatives and selling the best solution In addition the author breaks down the responsibilities of the engineer design documents computer aided design and government codes and standards Air Conditioning and Refrigeration Engineering provides you with an easy reference to all aspects of the topic This resource addresses the most current areas of interest such as computer aided design and drafting desiccant air conditioning and energy conservation It is a thorough and convenient guide to air conditioning and refrigeration engineering *Modeling and Control in Air-conditioning Systems* Ye Yao, Yuebin Yu, 2016-10-01 This book investigates the latest modeling and control technologies in the context of air conditioning systems Firstly it introduces the state space method for developing dynamic models of all components in a central air conditioning system The models are primarily nonlinear and based on the fundamental principle of energy and mass conservation and are transformed into state space form through linearization The book goes on to describe and discuss the state space models with the help of graph theory and the structure matrix theory Subsequently virtual sensor calibration and virtual sensing methods which are very useful for real system control are illustrated together with a case study Model based predictive control and state space feedback control are applied to air

conditioning systems to yield better local control while the air side synergic control scheme and a global optimization strategy based on the decomposition coordination method are developed so as to achieve energy conservation in the central air conditioning system Lastly control strategies for VAV systems including total air volume control and trim response static pressure control are investigated in practice *The CRC Handbook of Mechanical Engineering* D.
