Mayorga, Leonid Perlovsky, 2008 A diverse international set of authors discuss Artificial Computational Sapience and Sapient Systems in this unique and useful volume The reader is guided through the subject in a structured and comprehensive manner that begins with chapters discussing philosophical historical and semiotic ideas about what properties are expected from Sapient Wise systems Following that chapters describe mathematical and engineering views on sapience relating these to philosophical semiotic cognitive and neuro biological perspectives Summary of Gary Keller's The Millionaire Real Estate Agent by Swift Reads Swift

Meyer,Jan

Treur,2013-04-17 This volume the 6th volume in the DRUMS Handbook series is part of the after math of the successful ESPRIT project DRUMS Defeasible Reasoning and Uncertainty Management Systems which took place in two stages from 1989 1996 In the second stage 1993 1996 a work package was introduced devoted to the topics Reasoning and Dynamics covering both the topics of Dynamics of Reasoning where reasoning is viewed as a process and Reasoning about Dynamics which must be understood as pertaining to how both designers of and agents within dynamic systems may reason about these systems The present volume presents work done in this context This work has an emphasis on modelling and formal techniques in the investigation of the topic Reasoning and Dynamics but it is not mere theory that occupied us Rather research was aimed at bridging the gap between theory and practice Therefore also real life applications of the modelling techniques were considered and we hope this also shows in this volume which is focused on the dynamics of reasoning processes In order to give the book a broader perspective we have invited a number of well known researchers outside the project but working on similar topics to contribute as well We have very pleasant recollections of the project with its lively workshops and other meetings with the many sites and researchers involved both within and outside our own work package

On Redemption, the Value of Putting Bad Things to Good Use Peyton Craig McElroy, 2011 This dissertation offers a theory of a solution to the problem of lost meaning in life due to regrettable past events Each of us wishes for a meaningful life but each of us too is vulnerable to threats to the meaning in life The dissertation argues that a phenomenon called redemption can restore lost meaningfulness and increase the value of our lives overall The first step in the argument is to demonstrate the need for a new model of redemption The next step is to argue that redemption is a matter of transforming the meaning of events in our lives from bad to good in a thick eudaimonistic sense related to a person's well being Finally I show that this transformation not only increases a person's well being but more importantly changes the relationship a person has with his past By satisfying conditions for meaningfulness a special value a life can have distinct from its moral goodness or happiness redemption renders the past more meaningful than it would have otherwise been Because of this redemption can solve the

problem articulated in the beginning of the dissertation the problem of lost meaning in life due to bad past events
