AGILE 2003 Michael Gould, Robert Laurini, Stéphane Coulondre, 2003-01-01 AGILE 2003 , 2003 AGILE 2003 M. Gould, R. Laurini, S. Coulondre, 2003 *Geographic Information Science at the Heart of Europe* Danny Vandembroucke, Bénédicte Bucher, Joep Crompvoets, 2013-05-13 For the seventh consecutive year the AGILE promotes the publication of a book collecting high level scientific papers from unpublished fundamental scientific research in the field of Geographic Information Science As the agenda for Europe 2020 is currently being set this book demonstrates how geographic information science is at the heart of Europe The contributions open perspectives for innovative services that will strengthen our European economy and which will inform citizens about their environment while preserving their privacy The latest challenges of spatial data infrastructures are addressed such as the connection with the Web vocabularies or the representation of genealogy User generated data through social networks or through interactive cameras and software is also an important breakthrough in our domain A trend to deal more and more with time events ancient data and activities is noticeable this year as well This volume collects the 23 best full papers presented during the 16th AGILE Conference on Geographic Information Science held between 14 and 17 May 2013 in Leuven Belgium , *Multicriteria Decision Analysis in Geographic Information Science* Jacek Malczewski, Claus Rinner, 2015-02-02 This book is intended for the GIS Science and Decision Science communities It is primarily targeted at postgraduate students and practitioners in GIS and urban regional and environmental planning as well as applied decision analysis It is also suitable for those studying and working with spatial decision support systems The main objectives of this book are to effectively integrate Multicriteria Decision Analysis MCDA into Geographic Information Science GIScience to provide a comprehensive account of theories methods technologies and tools for tackling spatial decision problems and to demonstrate how the GIS MCDA approaches can be used in a wide range of planning and management situations **Spatial Information Theory** Stephan Winter, Matt Duckham, Lars Kulik, Ben Kuipers, 2007-08-26 This book constitutes the refereed proceedings of the 8th International Conference on Spatial Information Theory COSIT 2007 held in Melbourne Australia in September 2007 The 27 revised full papers were carefully reviewed from 102 submissions and they are organized in topical sections on cultural studies semantics similarity mapping and representation perception and cognition reasoning and algorithms navigation and landmarks as well as uncertainty and imperfection **Journal on Data Semantics III** , 2007-05-22 semantic caching data warehousing and semantic data mining spatial temporal multimedia and multimodal semantics semantics in data visualization semantic services for mobile users supporting tools applications of semantic driven approaches These topics are to be understood as specifically related to semantic issues Contributions submitted to the journal and dealing with semantics of data will be considered even if they are not within the topics in the list While the physical appearance of the journal issues looks like the books from the well known Springer LNCS series the mode of operation is that of a journal Contributions can

be freely submitted by authors and are reviewed by the Editorial Board Contributions may also be invited and nevertheless carefully reviewed as in the case for issues that contain extended versions of best papers from major conferences addressing data semantics issues Special issues focusing on a specific topic are coordinated by guest editors once the proposal for a special issue is accepted by the Editorial Board Finally it is also possible that a journal issue be devoted to a single text

GeoSpatial Semantics Martin Raubal, 2009-11-11 This book constitutes the refereed proceedings of the Third International Conference on GeoSpatial Semantics GeoS 2009 held in Mexico City Mexico in December 2009 The 10 revised full papers presented together with 2 keynote speeches were carefully reviewed and selected from 19 submissions The papers are organized in topical sections foundations on geo semantics formal representation of geospatial data semantics based information retrieval and recommender systems integration of semantics into spatial query processing and geo ontologies and applications

Web and Wireless Geographical Information Systems Sergio Di Martino, Adriano Peron, Taro Tezuka, 2012-04-05 This book constitutes the proceedings of the 11th International Symposium on Web and Wireless Geographical Information Systems W2GIS 2012 held in Naples Italy in April 2012 The 13 full and 4 short papers presented in this book were carefully reviewed and selected from 32 submissions The papers are organized in topical sections named 3D and multimodal spatial interaction positioning spatial human computer interaction trajectory analysis geo semantics and sensor networks

Interacting with Geospatial Technologies Mordechai (Muki) Haklay, 2015-10-26 This book provides an introduction to HCI and usability aspects of Geographical Information Systems and Science Its aim is to introduce the principles of Human Computer Interaction HCI to discuss the special usability aspects of GIS which designers and developers need to take into account when developing such systems and to offer a set of tried and tested frameworks matrices and techniques that can be used within GIS projects Geographical Information Systems and other applications of computerised mapping have gained popularity in recent years Today computer based maps are common on the World Wide Web mobile phones satellite navigation systems and in various desktop computing packages The more sophisticated packages that allow the manipulation and analysis of geographical information are used in location decisions of new businesses for public service delivery for planning decisions by local and central government Many more applications exist and some estimate the number of people across the world that are using GIS in their daily work at several millions However many applications of GIS are hard to learn and to master This is understandable as until quite recently the main focus of software vendors in the area of GIS was on the delivery of basic functionality and development of methods to present and manipulate geographical information using the available computing resources As a result little attention was paid to usability aspects of GIS This is evident in many public and private systems where the terminology conceptual design and structure are all centred around the engineering of GIS and not on the needs and concepts that are familiar to the user This book covers a range of topics from the cognitive models of geographical representation to interface design It will provide the reader with

frameworks and techniques that can be used and description of case studies in which these techniques have been used for computer mapping application **Geospatial Information Technology for Emergency Response** Sisi

Zlatanova,Jonathan Li,2008-01-24 Disaster management is generally understood to consist of four phases mitigation preparedness response and recovery While these phases are all important and interrelated response and recovery are often considered to be the most critical in terms of saving lives Response is the acute phase occurring after the event and includes all arrangements Landscape in Language David M. Mark,2011 This volume focuses on how landscape is represented in language and thought and what this reveals about the relationships of people to place and to land Back cover
