Aging And Cell Function:

Aging and Cell Function John Johnson, 2013-11-11 The aging process like most all things in the universe is a puzzle. It is such a fundamental occurrence common to all living things that it ironically may be the most complicated and perplexing puzzle to solve. There are of course puzzles sufficient in number to occupy all the scientists and philosophers who have ever lived a thousand times over. Yet what other phenomenon affects everyone of us as much as growing old? Curiosity about the ubiquity of aging as a phenomenon, boosted perhaps by an only natural fear of that same phenomenon as an undeniable manifestation of our own mortality, has led to the compilation of data on the aging process which have accumulated as rapidly as the elderly who might benefit from those data. Most of the scientific data on the biology of aging are at the biochemical and physiological levels while comparatively little information has been available at the anatomical level. Because of this a two volume set called *Aging and Cell Structure* was conceived, the first volume having been published in 1981 and the second volume being published concurrently with the present one on cell function. The emphasis on training of scientists and other individuals in advanced education has during past decades been one of increased specialization. Not merely do we specialize in physiology, anatomy, zoology or literature but in glomerular filtration, synaptic junctions, tree frogs of Brazil or English poetry of the nineteenth century.

Cellular Aging and Cell Death Nikki J. Holbrook, George R. Martin, Richard A. Lockshin, 1995-12-20 **Cellular AGING AND CELL DEATH** Edited by Nikki J Holbrook, George R Martin and Richard A Lockshin. *Cellular Aging and Cell Death* provides a thorough understanding of the mechanisms responsible for cellular aging, covering the recent research on programmed cell death and senescence and describing their role in the control of cell proliferation and the aging process. This one of a kind book is the first to combine the two hottest research areas of cell biology into one comprehensive text. Leading experts contribute to give readers an authoritative overview of the distinct fields of cellular aging and programmed cell death as well as to demonstrate how both fields are critical to understanding the aging process. They address the large and growing interest in apoptosis especially with regard to the molecular signals that induce and regulate programmed cell death and the role of apoptosis in a variety of age associated diseases and disabilities. Throughout the book a strong emphasis is placed on the interrelationship of the molecular, cellular and physiological aspects of senescence. Individual chapters discuss such topics as the role and regulation of apoptosis in development, the potential impact of cell death on such postmitotic tissues as nerve and muscle and suggest that programmed cell death plays an important role in both pathological and nonpathological aspects of aging including neurodegenerative diseases. One important chapter focuses on the most recent research involving the study of telomeres whose reduction in length with age and cell division may underlie cellular senescence. The subject of neuronal cell death is also put into the perspective of aging. *Cellular Aging and Cell Death* bridges the rapidly growing fields of cellular aging and programmed cell death. This thorough yet concise book will be of particular interest to graduate students and researchers within the fields of cell and

developmentalbiology neurobiology immunology and physiology Physicians andmedical students involved in the fields of gerontology andpathology will also find this an informative reference

Control of Pancreatic Beta Cell Function and Plasticity in Health and Diabetes David J. Hill,2016-12-02 Plasticity in insulin producing cells cells of the pancreas is a major contributor to metabolic control Targeted regeneration of pancreatic cells for the reversal of diabetes by optimizing cells mass and proliferation to meet metabolic requirements and counter autoimmune response is still a theoretical intervention This monograph reviews the biology ontogeny capabilities and present practical limitations of cell plasticity Relevant biochemical pathways are described with the inclusion of information about how they change with aging during pregnancy and with diet Readers will learn the following key aspects about cell plasticity current knowledge of pancreatic cells development and how cell mass and proliferation change throughout the human lifespan the mechanisms responsible for cell plasticity based on animal models and clinical studies revealing environmental epigenetic endocrine and paracrine regulators the therapeutic potential of resident stem cells within the pancreas bone marrow and cell progenitors This monograph is essential reading for researchers interested in updated knowledge about the molecular and cellular biology of cells in the quest to find a reliable therapy for diabetes
