Aging Biology Behavior:

Aging James L. McGaugh, Sara B. Kiesler, 2013-09-17 *Aging Biology and Behavior* addresses behavioral changes in aging related to biological processes focusing on the nature of changes in brain plasticity factors influencing life span and environmental and social influences on health in the elderly. This book is divided into four main topics: longevity, aging and mortality, aging brain and behavior, cognitive and social functioning, and health. In these topics, this publication specifically discusses the longevity in primates, life span extension, environment and biology in aging, and some economic implications of life span extension. The neurobiological basis of age-related changes in neuronal connectivity, aging and brain plasticity, and cognitive functioning in the elderly are also elaborated. This text likewise covers the life changes and disease in elderly populations, social stress and mental disorders in the elderly, and perspective of social epidemiology. This volume is a useful source to clinicians and students examining possible social and behavioral science research perspectives on aging.

Behavior, Aging, and the Nervous System Alan Travis Welford, James E. Birren, 1965 **Handbook of Models for Human Aging** P. Michael Conn, 2011-04-28 The *Handbook of Models for Human Aging* is designed as the only comprehensive work available that covers the diversity of aging models currently available. For each animal model, it presents key aspects of biology, nutrition factors affecting life span, methods of age determination, use in research, and disadvantages/advantages of use. Chapters on comparative models take a broad sweep of age-related diseases from Alzheimer's to joint disease, cataracts, cancer, and obesity. In addition, there is an historical overview and discussion of model availability, key methods, and ethical issues. Utilizes a multidisciplinary approach. Shows tricks and approaches not available in primary publications. First volume of its kind to combine both methods of study for human aging and animal models. Over 200 illustrations. **Aging** National Research Council (U.S.). Committee on Aging, **Departments of Labor and Health, Education and Welfare**

Appropriations for 1966 United States. Congress. House. Committee on Appropriations. Subcommittee on Departments of Labor and Health, Education, and Welfare, and Related Agencies Appropriations, 1965 **Culture, Biology, and Sexuality** David N. Suggs, Andrew W. Miracle, 1999 As the anthropological study of sex becomes more focused within the discipline, this volume offers a cross section of current research that examines the biological and cultural interface of sexuality. Through articles dealing with the difficulties in obtaining observational data and the relationship between biological and cultural influences, the contributors seek to understand why anthropology has not been better able to integrate behavioral and ideological approaches. Contributions range from methodological concerns such as the proposal for more holistic studies and the problem of relying strictly on people's reports of their sexual behavior to substantive issues such as cultural implications of biological research and how different cultures distinguish between romantic love and erotic sex. Integrating a wide range of viewpoints, the volume demonstrates that the study of sexuality is becoming more relevant to anthropology and provides a touchstone for scholars confronted with an increasingly bewildering array of approaches to this topic. *Developments in*
