Dynamics of Agricultural Development K. S. Dhindsa, 2001 **World Development Report 1994**, 1994 World Development Report 1994 examines the link between infrastructure and development and explores ways in which developing countries can improve both the provision and the quality of infrastructure services In recent decades developing countries have made substantial investments in infrastructure achieving dramatic gains for households and producers by expanding their access to services such as safe water sanitation electric power telecommunications and transport Even more infrastructure investment and expansion are needed in order to extend the reach of services especially to people living in rural areas and to the poor But as this report shows the quantity of investment cannot be the exclusive focus of policy Improving the quality of infrastructure service also is vital Both quantity and quality improvements are essential to modernize and diversify production help countries compete internationally and accommodate rapid urbanization The report identifies the basic cause of poor past performance as inadequate institutional incentives for improving the provision of infrastructure To promote more efficient and responsive service delivery incentives need to be changed through commercial management competition and user involvement Several trends are helping to improve the performance of infrastructure First innovation in technology and in the regulatory management of markets makes more diversity possible in the supply of services Second an evaluation of the role of government is leading to a shift from direct government provision of services to increasing private sector provision and recent experience in many countries with public private partnerships is highlighting new ways to increase efficiency and expand services Third increased concern about social and environmental sustainability has heightened public interest in infrastructure design and performance Indian Agriculture in the New Millennium N. A. material sourcing and regional trade in inputs and consumer products Both the agribusiness company survey and the industry case studies include recommendations for policymakers agribusiness managers representatives and agricultural and private sector development practitioners

Industrial Development In Singapore, Taiwan, & South Korea Leung-chuen Chau, Francis T Lui, Kai Sun Kwong, Larry Dongxiao Qiu, 2001-09-04 Economic analysis of the industrial experiences of the newly industrialized economies in Asia is generally lacking in the literature This study attempts to fill that void by providing an in depth discussion on the economic impact of the industrial policies of Singapore Taiwan and South Korea in the three and a half decades after 1960 Throughout the study a broad perspective of macroeconomic development is maintained It is highly critical of the narrow minded objective of certain governments in maximizing the pace of industrialization at the expense of general economic well being A comparative analysis of the industrial experiences of the three economies also shows a diversity of constraints and processes Singapore relied on multinational corporations Taiwan on returned engineers and South Korea on chaebols There appears to be no Asian formula for industrialization In Hong Kong there is an ongoing debate on whether some form of industrial policy should be introduced in view of the perception that Hong Kong is lagging behind the other economies in terms of technology Drawing on the experiences of the other economies the concluding chapter of the book provides an informed and balanced answer to this question
