Eldon Ball, 2012 This volume is written primarily for agricultural economists doing research on productivity It includes discussions of the theoretical underpinnings of productivity measurement as well as the many practical considerations that go into translating this theory into actual measures of aggregated outputs and inputs The unifying concept of agricultural productivity used across the chapters of this volume is aggregate total factor productivity TFP of the sector The volume also contains detailed analysis of the underlying causes of agricultural productivity growth Part I chapters 2 6 examines agricultural productivity in high income and transition countries Part II chapters 7 11 examines agricultural productivity growth and its driving forces in five important agricultural producers in Asia and Latin America Part III chapters 12 14 focuses on measuring and identifying constraints to agricultural productivity growth in sub Saharan Africa Part IV chapters 15 16 gives a global perspective on agricultural productivity      **Differences in Agricultural Research and Productivity Among 26 Countries** George B. Frisvold, United States. Department of Agriculture. Economic Research Service, Eugene Lomax, 1991      **Persistence Pays** Julian M. Alston, Matthew A. Andersen, Jennifer S. James, Philip G. Pardey, 2009-11-27 Agricultural science policy in the United States has profoundly affected the growth and development of agriculture worldwide not just in the United States Over the past 150 years and especially over the second half of the 20th Century public investments in agricultural R D in the United States grew faster than the value of agricultural production Public spending on agricultural science grew similarly in other more developed countries and collectively these efforts along with private spending spurred agricultural productivity growth in rich and poor nations alike The value of this investment is seldom fully appreciated The resulting productivity improvements have released labor and other resources for alternative uses in 1900 29.2 million Americans 39 percent of the population were directly engaged in farming compared with just 2.9 million 1.1 percent today while making food and fiber more abundant and cheaper The benefits are not confined to Americans U S agricultural science has contributed with others to growth in

agricultural productivity in many other countries as well as the United States. The world's population more than doubled from around 3 billion in 1961 to 6.54 billion in 2006 (U.S. Census Bureau 2009). Over the same period, production of important grain crops including maize, wheat, and rice almost trebled, such that global per capita grain production was 18 percent higher in 2006.

**Evaluating Agricultural Research and Productivity in an Era of Resource Scarcity**, 1994. *Productivity Growth in Agriculture*. K. O. Fugile, 2012. Increasing food prices have renewed concerns about long-term agricultural demand and supply in the global economy. This book looks at results, methods, and data on international agricultural productivity for a better understanding of long-run trends and the policies that determine them. By presenting an international assessment of total factor productivity growth in agriculture, including up-to-date empirical analysis for developed and developing countries and regions, it provides a response to the rising global scarcity of agricultural production. It is essential reading for researchers.

Resource Allocation and Productivity in National and International Agricultural Research. Thomas Arndt, Dana Dalrymple, Vernon Ruttan, 1977-02-25. *Resource Allocation and Productivity in National and International Agricultural Research* was first published in 1977. Agricultural research in developing countries has grown rapidly in recent years. As the research system has expanded, questions about the productivity of research and the allocation of research resources have become important issues for development planners, science managers, donor agencies, and other individuals and institutions concerned with research operations and opportunities. In this volume, forty contributors, natural and social scientists and research administrators, provide a comprehensive analysis of the implications of agricultural science and technology for agricultural development. They examine recent evidence on the returns to investment in national and international agricultural research systems and explore the relevance of social and economic factors for the organization and management of these systems. In a final section, they discuss research strategy and management issues that will affect the future productivity and organization of both the international and the national research systems. The material is based on papers given at a conference held at Airlie House, Virginia, sponsored by the Agricultural Development Council. Funding was provided through the U.S. Agency for International Development (USAID) support of the Council's Research Training and Network Program and by additional assistance from the World Bank.

**Evaluating agricultural research and productivity**, 1987\*. **Agricultural research in Southeast Asia: A cross-country analysis of resource allocation, performance, and impact on productivity**. Stads, Gert-Jan, Nin-Pratt, Alejandro, Omot, Norah, Thi Pham, Nguyen, 2020-10-26. Southeast Asia made considerable progress in building and strengthening its agricultural R & D capacity during 2000-2017. All of the region's countries reported higher numbers of agricultural researchers, improvements in their average qualification levels, and higher shares of women participating in agricultural R & D. In contrast, regional agricultural research spending remained stagnant despite considerable growth in agricultural output over time. As a result, Southeast Asia's agricultural research intensity, that is, agricultural research spending as a share of agricultural GDP, steadily declined from 0.50 percent in 2000 to

just 0.33 percent in 2017. Although the extent of underinvestment in agricultural research differs across countries, all Southeast Asian countries invested below the levels deemed attainable based on the analysis summarized in this report. The region will need to increase its agricultural research investment substantially in order to address future agricultural production challenges more effectively and ensure productivity growth. Southeast Asia's least developed agricultural research systems, Cambodia, Laos, and Myanmar, are characterized by low scientific output and researcher productivity as a direct consequence of severe underfunding and lack of sufficient well-qualified research staff. While Malaysia and Thailand have significantly more developed agricultural research systems, they still report key inefficiencies and resource constraints that require attention. Indonesia, the Philippines, and Vietnam occupy intermediate positions between these two groups of high and low performing agricultural research systems. Growing national economies, higher disposable incomes, and changing consumption patterns will prompt considerable shifts in levels of agricultural production, consumption, imports, and exports across Southeast Asia over the next 20 to 30 years. The resource allocation decisions that governments make today will affect agricultural productivity for decades to come. Governments therefore need to ensure the research they undertake is responsive to future challenges and opportunities and aligned with strategic development and agricultural sector plans. ASTI's projections reveal that prioritizing investment in staple crops will still trigger fastest agricultural productivity growth in Laos. However, Indonesia, Malaysia, and Vietnam could achieve faster growth over the next 30 years by prioritizing investment in research focused on fruit, vegetables, livestock, and aquaculture. In Cambodia, Myanmar, and Thailand, the choice between focusing on staple crops versus high value commodities was less pronounced, but projections did indicate that prioritizing investments in oil crop research would trigger significantly lower growth in agricultural productivity.

Back cover blurb: Rising agricultural productivity has driven improvements in living standards for millennia. Today, redoubling that effort in developing countries is critical to reducing extreme poverty, ensuring food security for an increasing global population, and adapting to changes in climate. This volume presents fresh analysis on global trends and sources of productivity growth in agriculture and offers new perspectives on the drivers of that growth. It argues that gains from the reallocation of land and labor are not as promising as believed, so policy needs to focus more on the generation and dissemination of new technologies, which requires stepping up national research efforts. Yet in many of the poorest nations, a serious research spending gap has emerged precisely at the time when the challenges faced by agriculture are intensifying. The book focuses on how this problem can be redressed in the public sector as well as on reforms aimed at mobilizing new private sector actors and value chains, particularly creating a better enabling environment, reforming trade,

regulations introducing new products and strengthening intellectual property rights On the demand side the book examines what recent research reveals about policies to reduce the barriers impeding smallholder farmers from adopting new technologies Harvesting Prosperity is the fourth volume of the World Bank Productivity Project which seeks to bring frontier thinking on the measurement and determinants of productivity to global policy makers As rightly argued by the authors growth in agricultural productivity is the essential instrument to promote development in low income agriculture based countries Achieving this requires research and development upgrading of universities reinforcement of farmer capacities removal of constraints to adoption and the development of inclusive value chains with interlinked contracts As important such efforts also need to be placed within a context of comprehensive agricultural rural and structural transformations However in many countries implementation of the requisite policies has been lagging This book with contributions from many top experts in the field provides the most up to date presentation of this argument and explains in detail how to successfully put its ideas into practice Governments the private sector and civil society organizations need to study it carefully to turn the promise of agriculture for development into a reality Alain de Janvry and Elisabeth Sadoulet Professors of the Graduate School University of California at Berkeley Agricultural Research & Productivity Measurement Seppo Aaltonen,1987
