Agricultural Growth, Rural Poverty and Environmental Degradation in India C. H. Hanumantha Rao, Institute of Economic Growth (India), 1994 Based on over twenty years of first hand research this book explores the nature of the interrelationships among agricultural growth rural poverty environmental degradation and participatory rural institutions in India C H Rao looks at the spread of agricultural growth to less developed regions and the subsequent decline of real poverty the decline of real public investment in agriculture and the increasing levels of environmental degradation due to the slow rate of land replenishing technological change In his analysis Rao demonstrates the implications of this tangled network for the future of development strategy and policy in the context of the on going economic reforms **Beyond Food Production** Fabrizio

Bresciani, Alberto Valdés, 2007-01-01 The importance of agricultural growth to poverty reduction is well known but the specific channels through which the poor can take advantage of growth require further research Bresciani and Valdés investigate four important channels rural labour markets farm incomes food prices and linkages to other economic sectors Part 1 looks at the synthesis and theoretical background and part 2 is country case studies **Down to Earth** Luc J. Christiaensen, 2007 This book contributes to the debate about the role of agriculture in poverty reduction by addressing three sets of questions Does investing in agriculture enhance overall economic growth and if so under what conditions Do poor people tend to participate more less in growth in agriculture than in growth in other sectors and if so when If a focus on agriculture would tend to yield larger participation by the poor but slower overall growth which strategy would tend to have the largest payoff in terms of poverty reduction and under which conditions **The Future of Small Farms for Poverty**

Reduction and Growth Hazell, P.B.R., Poulton, Colin, Wiggins, Steve, Dorward, Andrew, 2007 *The Role of Agriculture in Poverty Reduction* Luc J. Christiaensen, Lionel Demery, Jesper Khl, 2006 The relative contribution of a sector to poverty reduction is shown to depend on its direct and indirect growth effects as well as its participation effect The paper assesses how these effects compare between agriculture and non agriculture by reviewing the literature and by analyzing cross country national accounts and poverty data from household surveys Special attention is given to Sub Saharan Africa While the direct growth effect of agriculture on poverty reduction is likely to be smaller than that of non agriculture though not because of inherently inferior productivity growth the indirect growth effect of agriculture through its linkages with nonagriculture appears substantial and at least as large as the reverse feedback effect The poor participate much more in growth in the agricultural sector especially in low income countries resulting in much larger poverty reduction impact Together these findings support the overall premise that enhancing agricultural productivity is the critical entry point in designing effective poverty reduction strategies including in Sub Saharan Africa Yet to maximize the poverty reducing effects the right agricultural technology and investments must be pursued underscoring the need for much more country specific analysis of the structure and institutional organization of the rural economy in designing poverty reduction strategies

Beyond Food Production Fabrizio Bresciani, Alberto Valdés, 2007-01-01 The importance of agricultural growth to poverty reduction is well known but the specific channels through which the poor can take advantage of growth require further research This publication takes on this challenge investigating four important channels rural labor markets farm incomes food prices and linkages to other economic sectors Using six developing country cases Chile Mexico India Indonesia Ghana South Africa this study elucidates the mechanisms linking agriculture growth to economic development and the wellbeing of the poor The evidence shows that governments should view the sector s contribution in wider terms recognizing both its interaction with other economic sectors and that labor markets and trade policies can play a critical role in mediating agriculture s impact on poor households incomes To achieve effective rural poverty strategies the book calls for a broad economy wide perspective on the role of agriculture in the overall growth process Publisher s description **Impacts of agricultural investments on growth and poverty: A review of literature** Martin, Will, 2021-11-24 Agricultural development is crucial in developing countries and particularly in the poorest countries where it accounts for large shares of employment and income and whose poverty is due simply to having a large share of the workforce in low productivity agriculture Raising productivity in agriculture is critically important for development as is smoothly moving workers out of agriculture into more productive employment in other sectors Raising agricultural productivity helps both to raise incomes and to reduce poverty both by raising the incomes of poor people working in agriculture and by lowering the prices of foods that make up a disproportionately large share of the expenditures of poor people In small and open economies the increase in profitability of agriculture following improvements in productivity might tend to retain or even attract workers into

agriculture By contrast at a global level or at national level when policy focusses on self sufficiency improvements in agricultural productivity will free up labor for employment in other sectors Incomes are generally much higher in non agricultural work in developing countries more than double those in agriculture after careful adjustment for key differences This raises the possibility of a double dividend from structural transformation as workers move into higher productivity activities A key question for development policy is whether it is enough to simply evaluate the gains from higher productivity within agriculture or whether potential benefits from structural change be included as well This paper examines the arguments on this question It concludes that these dividends may be substantial but whether they are or not depends on the source of the initial differences in productivity and on the direction of movement when agricultural productivity rises If it results from policy barriers such as restrictions on the transfer of farmland or requirements for residence permits in urban areas there are likely to be substantial welfare gains when labor moves out of agriculture They may also be substantial if urban wages are artificially high and attract substantial numbers of job waiters into unemployment However these gains may be illusory if the income gaps arise primarily from differences in skills or from reluctance to move created by asset fixity

Poverty, Agriculture, and Economic Growth B. M. Bhatia, 1977 On the Indian experience **The Role of Agriculture in Poverty Reduction** Luc Christiaensen, Lionel Demery, Jesper Kuhl, 2012 The relative contribution of a sector to poverty reduction is shown to depend on its direct and indirect growth effects as well as its participation effect The paper assesses how these effects compare between agriculture and non agriculture by reviewing the literature and by analyzing cross country national accounts and poverty data from household surveys Special attention is given to Sub Saharan Africa While the direct growth effect of agriculture on poverty reduction is likely to be smaller than that of non agriculture though not because of inherently inferior productivity growth the indirect growth effect of agriculture through its linkages with nonagriculture appears substantial and at least as large as the reverse feedback effect The poor participate much more in growth in the agricultural sector especially in low income countries resulting in much larger poverty reduction impact Together these findings support the overall premise that enhancing agricultural productivity is the critical entry point in designing effective poverty reduction strategies including in Sub Saharan Africa Yet to maximize the poverty reducing effects the right agricultural technology and investments must be pursued underscoring the need for much more country specific analysis of the structure and institutional organization of the rural economy in designing poverty reduction strategies

Agricultural Growth and Investment Options for Poverty Reduction in Rwanda Xinshen Diao, Shenggen Fan, Sam Kanyarukiga, Bingxin Yu, 2010-01-01 Although Rwanda has made considerable progress in recovering politically and economically from the devastating effects of the 1994 genocide the poverty rate is still higher and the gross domestic product lower than before the genocide Poverty reduction and economic growth would receive much needed support from increased agricultural growth This study assesses alternative agricultural development strategies identifying areas in which policy reforms together with public and private investment can best promote Rwandan agriculture The authors evaluate the potential of several different agricultural subsectors grains root crops livestock and others to contribute to national agricultural growth and poverty reduction They conclude that growth in staple crops particularly root crops such as cassava and potatoes has the greatest potential to encourage economywide growth and poverty reduction Promoting the necessary staple crop growth will require the allocation of public resources to the agricultural sector to increase significantly reaching 10 percent of the total government budget It will also require rethinking Rwanda's earlier emphasis on promoting export crop growth which has proved inadequate in encouraging poverty reduction while also posing environmental problems This study makes an important contribution to the debate over the most effective development strategies for Rwanda and other Sub Saharan African nations Show More Show Less

Farming Systems and Poverty John A. Dixon, David P. Gibbon, Aidan Gulliver, Food and Agriculture Organization of the United Nations, 2001-01-01 Small farmers produce much of the developing world's food Yet they are generally much poorer than the rest of the population in these countries and are less food secure than even the urban poor Furthermore although the majority of the world's population will live in urban areas by 2030 farming populations will not be much smaller than they are today For the foreseeable future therefore dealing with poverty and hunger in much of the world means confronting the problems that small farmers and their families face in their daily struggle for survival Through an examination of a wide variety of farming systems across the developing world this book co published with the World Bank shows how the farming systems approach can be used to identify key local regional and international priorities for the reduction of hunger and poverty
