Agricultural Productivity Measurement And Explanation:

Agricultural Productivity Susan M. Capalbo, John M. Antle, 2015-08-11 This book first published in 1988 provides a comprehensive integrated body of knowledge concerning agricultural productivity research highlighting both its strengths and limitations This book will be of value to scholars and research leaders for the knowledge it conveys of future productivity research and will also be of interest to students of environmental studies **Agricultural Productivity** S. C. Mathur, 1965

Agricultural Productivity Virgil Ball, 2012-12-06 Agricultural Productivity Measurement and Sources of Growth addresses measurement issues and techniques in agricultural productivity analysis applying those techniques to recently published data sets for American agriculture The data sets are used to estimate and explain state level productivity and efficiency differences and to test different approaches to productivity measurement The rise in agricultural productivity is the single most important source of economic growth in the U S farm sector and the rate of productivity growth is estimated to be higher in agriculture than in the non farm sector It is important to understand productivity sources and to measure its growth properly including the effects of environmental externalities Both the methods and the data can be accessed by economists at the state level to conduct analyses for their own states In a sense although not explicitly the book provides a guide to using the productivity data available on the website of the U S Department of Agriculture Economic Research Service It should be of interest to a broad spectrum of professionals in academia the government and the private sector

Methodologies for Comparisons of Agricultural Output, Input, and Productivity ,1991 **Capacity Utilization and Measurement of Agricultural Productivity** James H. Hauver, 1991 Measuring Productivity in African Agriculture Simeon Ehui, 2002-01-01 This paper argues that partial productivity measures are inappropriate and at times misleading for assessing the performance of agricultural production technologies and systems This is especially true where substantial changes in resource stock and flows accompany the production process Superlative index based total factor productivity measures are a more appropriate technique to compare production efficiency and sustainability of alternative systems Mathematical formulations of intertemporal and interspatial total factor productivity measures with and without considering changes in resource stock and flows are shown Then three case studies from sub Saharan Africa in which this approach was applied are reviewed These studies show that total factor productivity measures are biased if changes in resource stock and flows are not appropriately accounted for in intertemporal comparisons and differences in input intensity are not accounted

for in interspatial comparisons **New Directions in Productivity Measurement and Efficiency Analysis** Tihomir Ancev, M.A. Samad Azad, Francesc Hernández-Sancho, 2017-06-30 This book explores novel research perspectives on the intersection of environmental natural resource economics and productivity analysis emphasizing the link between productivity and efficiency measurement and environmental impacts The purpose of the book is to present new approaches and methods for measuring environmentally adjusted productivity and efficiency and for incorporating natural resources in standard national accounting practices These methods are applicable in many contexts including air and water pollution climate change green accounting and environmental regulation Agricultural Investment and Productivity in Developing Countries Food and Agriculture Organization of the United Nations, 2001-01-01 The purpose of this book is to provide an overview of current thinking and findings about the relationship between agricultural investment and productivity in developing countries This includes theoretical and methodological developments such as incorporating natural resource depletion in calculating measures of growth It also looks at the relationship investment and productivity and factors such as land policy debt civil unrest and structural adjustment programmes An area of concern is that a lack of information hampers the assessment of sustainability of agricultural and rural development Capacity Utilization and Measurement of Agricultural Productivity James H. Hauver, 1991 **The Journal of Agricultural Economics Research** ,1990 **Water and Land Security in Drylands** Mohamed Ouessar, Donald Gabriels, Atsushi Tsunekawa, Steven Evett, 2017-04-25 This book presents recent lessons learned in the context of research and development for various dryland ecosystems focusing on water resources management land and vegetation cover degradation and remediation and socioeconomic aspects as well as integrated approaches to ensuring water and land security in view of the current and predicted climate change As water and land are the essential bases of food production the management of these natural resources is becoming a cornerstone for the development of dryland populations The book gathers the peer reviewed revised versions of the most outstanding papers on these topics presented at the ILDAC2015 Conference in Djerba Tunisia **Bibliography of Agriculture with Subject Index** ,1988-10 *Persistence Pays* Julian M. gricultural science policy in the United States has profoundly affected the growth and development of agriculture worldwide not just in the A United States Over the past 150 years and especially over the second th half of the 20 Century public investments in agricultural R D in the United States grew faster than the value of agricultural production Public spending on agricultural science grew similarly in other more developed countries and c lectively these efforts along with private spending spurred agricultural prod tivity growth in rich and poor nations alike The value of this investment is seldom fully appreciated The resulting p ductivity improvements have released labor and other resources for alternative uses in 1900 29 2 million Americans 39 percent of the population were rectly engaged in farming compared with just 2 9 million 1 1 percent today while making food and fiber more abundant and cheaper The benefits are not confined to Americans U S agricultural

science has contributed with others to growth in agricultural productivity in many other countries as well as the United States. The world's population more than doubled from around 3 billion in 1961 to 6.54 billion in 2006 (U.S. Census Bureau, 2009). Over the same period, production of important grain crops including maize, wheat, and rice almost trebled, such that global per capita grain production was 18 percent higher in 2006. *Agricultural Productivity in the United States* (Mary Ahearn, 1998)

Agricultural productivity in Africa (Benin, Samuel, 2016-07-14). *Agricultural Productivity in Africa: Trends, Patterns, and Determinants* presents updated and new analyses of land, labor, and total productivity trends in African agriculture. It brings together analyses of a unique mix of data sources and evaluations of public policies and development projects to recommend ways to increase agricultural productivity in Africa. This book is timely in light of the recent and ongoing growth recovery across the continent. The good news is that agricultural productivity in Africa increased at a moderate rate between 1961 and 2012, although there are variations in the rate of growth in land, labor, and total factor productivities depending on country and region. Differences in input use and capital intensities in agricultural production in the various farming systems and agricultural productivity zones also affect advancements in technology. One conclusion based on the book's research findings derives from the substantial spatial variation in agricultural productivity: For areas with similar agricultural productivity growth trends and factors, what works well in one area can be used as the basis for formulating best-fit, location-specific agricultural policies, investments, and interventions in similar areas. This finding, along with others, will be of particular interest to policy and decisionmakers. *ERS Staff Report*, 1991. Pesticide Policy, Production Risk, and Producer Welfare (John M. Antle, 2015-07-30). The use of pesticides to control agricultural pests both benefits farm production and imposes health and environmental costs on producers and society. This title, first published in 1988, includes an application of the author's methodology to tomato production in which Antle illuminates the roles that alternative methods of pest management play in producer welfare. He also develops a more general empirical framework for studying producer welfare under uncertainty, a framework in which production risk, sequential decision making, and attitudes toward risk are integrated. This title will be of interest to students of environmental studies.
