Poyyamoli, 2017-06-26 Tropical ecosystems are some of the most biologically and ecologically diverse in the world Traditional local agroecosystems in the tropics reflect this diversity and provide excellent examples of how nature can be used as the model for designing and managing sustainable agroecosystems This book brings together such examples Using an agroecological approach the collection of chapters demonstrates how agroecology must simultaneously be a science a practice and a movement for social change towards a paradigm of sustainability that engages all parts of the food system from the field to the table Chapter contributors were selected from multiple countries and backgrounds providing a valuable diversity of approaches and knowledge systems and the interaction of these systems gives this book the important transdisciplinarity that has become a key component of agroecology Working across disciplines and knowledge systems is necessary in order to link the multiple components of food systems that promote effective change As food systems return to the diversity complexity and resilience they once had it is collections of experiences as presented in this book that provide examples of the path we must be on Steve Gliessman Professor Emeritus of Agroecology University of California Santa Cruz USA Modeling and Analyzing the Agroecological Performance of Farms with ECOPATH Roberto Tomas

Beeman,James A. Pritchard,2001 Once patronized primarily by the counterculture and the health food establishment the organic food industry today is a multi billion dollar business driven by ever growing consumer demand for safe food and greater public awareness of ecological issues Assumed by many to be a recent phenomenon that industry owes much to agricultural innovations that go back to the Dust Bowl era This book explores the roots and branches of alternative agricultural ideas in twentieth century America showing how ecological thought has challenged and changed agricultural theory practice and policy from the 1930s to the present It introduces us to the people and institutions who forged alternatives to industrialized agriculture through a deep concern for the enduring fertility of the soil a passionate commitment to human health and a strong advocacy of economic justice for farmers Randal Beeman and James Pritchard show that agricultural issues were central to the rise of the environmental movement in the United States As family farms failed during the Depression a new kind of agriculture was championed based on the holistic approach taught by the emerging science of ecology Ecology influenced the permanent agriculture movement that advocated such radical concepts as long term land use planning comprehensive soil conservation and organic farming Then in the 1970s sustainable agriculture combined many of these ideas with new concerns about misguided technology and an over consumptive culture to preach a more sensible approach to farming In chronicling the

overlooked history of alternative agriculture A Green and Permanent Land records the significant contributions of individuals like Rex Tugwell Hugh Bennett Louis Bromfield Edward Faulkner Russell and Kate Lord Scott and Helen Nearing Robert Rodale Wes Jackson and groups like Friends of the Land and the Practical Farmers of Iowa And by demonstrating how agriculture also remains central to the public interest especially in the face of climatic crises genetically altered crops and questionable uses of pesticides this book puts these issues in historical perspective and offers readers considerable food for thought
