Contributed papers presented at the 7th National Conference on Air Breathing Engines and Aerospace Propulsion hosted at IIT Kanpur

Air Breathing Engines And Aerospace Propulsion V. Ganesan, 1997 This book includes 57 technical papers presented by academicians, scientists and practising engineers. The papers cover a wide spectrum of topics such as aerothermodynamics of propulsion systems including reciprocating and rotary engines, heat transfer, engine performance, rotor dynamics, health monitoring, instrumentation, engine control and the evaluation and testing of propulsion systems.

Airbreathing Propulsion Tarit Bose, 2012-06-08 Airbreathing Propulsion covers the physics of combustion, fluid and thermodynamics and structural mechanics of airbreathing engines including piston, turbo-prop, turbojet, turbofan and ramjet engines. End of chapter exercises allow the reader to practice the fundamental concepts behind airbreathing propulsion and the included PAGIC computer code will help the reader to examine the relationships between the performance parameters of different engines. Large amounts of data have on many different piston, turbojet and turbo-prop engines have been compiled for this book and are included as an appendix. This textbook is ideal for senior undergraduate and graduate students studying aeronautical engineering, aerospace engineering and mechanical engineering.

Theory of Aerospace Propulsion Pasquale M. Sforza, 2016-08-13 Theory of Aerospace Propulsion Second Edition teaches engineering students how to utilize the fundamental principles of fluid mechanics and thermodynamics to analyze aircraft engines, understand the common gas turbine aircraft propulsion systems, be able to determine the applicability of each performance system, studies of aircraft engine systems for specified flight conditions and preliminary aerothermal design of turbomachinery components and conceive, analyze and optimize competing preliminary designs for conventional and unconventional missions. This updated edition has been fully revised with new content, new examples and problems and improved illustrations to better facilitate learning of key concepts. Includes broader coverage than that found in most other books including coverage of propellers, nuclear rockets and space propulsion to allow analysis and design of more types of propulsion systems. Provides in-depth quantitative treatments of the components of jet propulsion engines including the tools for evaluation and component matching for optimal system performance. Contains additional worked examples and progressively challenging end of chapter exercises that provide practice for analysis, preliminary design and systems integration.

Air Breathing Engines Zoeb Husain, 2010-02 Examines the theory of air breathing engines or more precisely aircraft engines. These engines take air from the atmosphere, accelerate and produce thrust to the aircraft. Gas turbine forms the basic unit and is gas generator. The components of the gas turbines are given in detail. The book will be useful for aeronautical engineering students.
